right to wage war across a mobile battlefield that potentially spans the globe Remote control flying weapons he argues take us well beyond even George W Bush s justification for the war on terror What we are seeing is a fundamental transformation of the laws of war that have defined military conflict as between combatants As more and more drones are launched into battle war now has the potential to transform into a realm of secretive targeted assassinations of individuals beyond the view and control not only of potential enemies but also of citizens of democracies themselves Far more than a simple technology Chamayou shows drones are profoundly influencing what it means for a democracy to wage war A Theory of the Drone will be essential reading for all who care about this important question **Multisensor Fusion** Rajive Joshi,Arthur C.

Sanderson,1999 The fusion of information from sensors with different physical characteristics such as sight touch sound etc enhances the understanding of our surroundings and provides the basis for planning decision making and control of autonomous and intelligent machines The minimal representation approach to multisensor fusion is based on the use of an information measure as a universal yardstick for fusion Using models of sensor uncertainty the representation size guides the integration of widely varying types of data and maximizes the information contributed to a consistent interpretation In this book the general theory of minimal representation multisensor fusion is developed and applied in a series of experimental studies of sensor based robot manipulation A novel application of differential evolutionary computation is introduced to achieve practical and effective solutions to this difficult computational problem The MIT Encyclopedia of the Cognitive Sciences (MITECS) Robert A. Wilson, Frank C. Keil, 2001-09-04 Since the 1970s the cognitive sciences have offered multidisciplinary ways of understanding the mind and cognition The MIT Encyclopedia of the Cognitive Sciences MITECS is a landmark comprehensive reference work that represents the methodological and theoretical diversity of this changing field At the core of the encyclopedia are 471 concise entries from Acquisition and Adaptationism to Wundt and X bar Theory Each article written by a leading researcher in the field provides an accessible introduction to an important concept in the cognitive sciences as well as references or further readings Six extended essays which collectively serve as a roadmap to the articles provide overviews of each of six major areas of cognitive science Philosophy Psychology Neurosciences Computational Intelligence Linguistics and Language and Culture Cognition and Evolution For both students and researchers MITECS will be an indispensable guide to the current state of the cognitive sciences **Good Robot, Bad Robot** Jo Ann Oravec, 2022-09-30 This book explores how robotics and artificial intelligence AI can enhance human lives but also have unsettling dark sides It examines expanding forms of negativity and anxiety about robots AI and autonomous vehicles as our human environments are reengineered for intelligent military and security systems and for optimal workplace and domestic operations It focuses on the impacts of initiatives to make robot interactions more humanlike and less creepy as with domestic and sex robots It analyzes the emerging resistances against these entities in the wake of omnipresent AI applications such as killer robots and ubiquitous surveillance It unpacks efforts by developers to have ethical and social

influences on robotics and AI and confronts the AI hype that is designed to shield the entities from criticism The book draws from science fiction dramaturgical ethical and legal literatures as well as current research agendas of corporations Engineers implementers and researchers have often encountered users fears and aggressive actions against intelligent entities especially in the wake of deaths of humans by robots and autonomous vehicles The book is an invaluable resource for developers and researchers in the field as well as curious readers who want to play proactive roles in shaping future technologies

Formative Design in Learning Brad Hokanson, Matthew Schmidt, Marisa E. Exter, Andrew A. Tawfik, Yvonne Earnshaw, 2023-11-27 Learning design is an ill structured process that must account for multiple stakeholders

contextual constraints and other instructional needs Whereas many theories outline learning theories less is known about the formative design process and how it impacts the design and development of learning technologies This is critical because a formative view considers the issues that educators encounter and how to overcome them during the learning design process This edited volume provides a multi faceted look at theories studies and design cases that employ formative design in learning across multiple domains Topics include processes oriented around design thinking design based research and others Additional chapters provide contextual considerations such as describing how formative design was used to design learning solutions for STEM learning and food banks as well as overcoming challenges in emergency remote teaching In doing so the book provides an interdisciplinary view that explores how scholars and practitioners engage in formative practices that support a wide array of learners and contexts
