Heppner, Joseph C. Cain, Thomas L. Skillman, NATIONAL AERONAUTICS AND SPACE ADMINISTRATION WASHINGTON D C., 1961 Mapping of the earth s magnetic field with satellites is of primary importance in the World Magnetic Survey This importance stems not only from the operational capability to map vast regions in minimum time but also from the capability to differentiate the causes of variations in the earth s field Rocket and space probe measurements supplement satellite surveys in providing cross ties for mapping and in finding the sources of field variations For most of the survey objectives highly accurate measurements are required Thus magnetometers based on nuclear or atomic resonance offer many

advantages Vanguard III 1959 eta with a proton precessional magnetometer was an initial step toward field mapping with an absolute instrument Optical pumping magnetometers now make possible continuous absolute measurements over the full range of earth field intensities with low power dissipation The Orbiting Geophysical Observatory satellites will probably be the primary vehicles for future magnetic field surveys These include satellites in highly eccentric orbits with small inclination and satellites in polar orbits of low eccentricity Author Missiles, Rockets and Satellites: United States United States.
