Minkowski Spacetime: A Hundred Years Later Vesselin Petkov,2010-03-11 Celebrating the one hundredth anniversary of

the 1909 publication of Minkowski's seminal paper *Space and Time* this volume includes a fresh translation as well as the original in German and a number of contributed papers on the still controversial subject

Mind And Reality: The Space-time Window Wolfram Schommers, 2014-09-22 The relationship between mind and reality is usually perceived as an event that takes place in reality and producing simultaneously an internal image in the mind So it takes place twice so to speak and there is a one to one correspondence between the two events Within this conception matter is embedded in space and time and can be designated as container principle This monograph emphasizes that the well known philosopher Immanuel Kant denied this principle and he stated that reality is principally not recognizable to a human being and modern biological evolution seems to lead exactly to Kant's point of view Within the theory of evolution man's image about reality in mind does not have to be complete and true in the sense of a precise reproduction and it is relatively easy to recognize that even space and time should not be elements of reality outside Within this conception only a certain part of reality which the human being needs for mastering life is projected onto space and time and we come to the so called projection principle Then spacetime defines the window to reality leading to a number of exciting and essential questions some of which are discussed in this monograph As is known current physics is mainly based on the container principle But this monograph proposes that the projection principle is obviously more suitable and could help to solve open ended questions as for example in connection with the nature of time the particle wave duality the cosmological constant etc Regarding the statistical behavior of matter Einstein's statement God does not play dice has to be seen in a new light but also Feynman's general viewpoint on quantum theory that it cannot be understood by man However conventional quantum theory is obviously not a consistent framework as per the projection principle The term world equation is critically probed in this monograph

Space and Time, Matter and Mind Wolfram Schommers, 1994 In principle the elements of space and time cannot be measured Therefore the following question arises How are reality and space time related to each other In this book it is argued on the basis of many facts that reality is not embedded but projected onto space and time We can never make statements about the actual reality outside basic reality but we can only form pictures of it These are pictures of the same reality on different levels From this point of view the hard objects matter and the products of the mind are similar in character

Effective Spacetime Karen Crowther, 2016-07-07 This book discusses the notion that quantum gravity may represent the breakdown of spacetime at extremely high energy scales If spacetime does not exist at the fundamental level then it has to be considered emergent in other words an effective structure valid at low energy scales The author develops a conception of emergence appropriate to effective theories in physics and shows how it applies or could apply in various approaches to quantum gravity including condensed matter approaches discrete approaches and loop quantum gravity

The Foundations of Spacetime Physics Antonio Vassallo, 2022-09-30 This book provides an up to date overview of the foundations of spacetime physics It features original essays written by world class experts in the physics and philosophy of spacetime The foundational questions

regarding the origin and nature of spacetime are branching into new and exciting directions These questions are not restricted to the quantum gravity program but also arise in the context of a well established theory like general relativity Against the background of these quick and diverse developments this volume features a broad range of perspectives on spacetime Part I focuses on the nature of spacetime in non quantum theories such as Newtonian mechanics and relativity Part II explores some intriguing conceptual implications of developing a quantum theory of spacetime The Foundations of Spacetime Physics is an essential resource for scholars and advanced students working in philosophy of physics philosophy of science and scientific metaphysics **Space-time and Beyond** Bob Toben,Fred Alan Wolf,1982
