The Role of Primary Motor Cortex as a Marker for and Modulator of Pain Control and Emotional-Affective Processing Jorge Leite, Sandra Carvalho, Linamara R. Battistella, Wolnei Caumo, Felipe Fregni, 2017-09-06 The sensory and motor cortical homunculi proposed by Walter Penfield were a major landmark for the anatomical mapping of the brain More than 60 years after the development of new tools to investigate brain function non invasively has increased our knowledge about the structure and functions of the primary motor Cortex M1 beyond motor control in both humans and animals This book highlights the role of the motor cortex that goes way beyond motor functioning We were interested in both theoretical and empirical contributions related to electrophysiological pharmacological neuroimaging and neuromodulatory studies exploring the role of M1 on non motor functions such as pain abnormal neuroplasticity that may lead to chronic pain conditions or the relationship between M1 and mental imagery or emotion This book is comprised of 15 articles published in this edited volume as a research topic collection in *Frontiers in Human Neuroscience* titled *The Role of Primary Motor Cortex as a Marker and Modulator of Pain Control and Emotional Affective Processing*

Handbook of Neurochemistry and Molecular Neurobiology Pak H. Chan, 2006-11-22 Stroke is a global health problem affecting approximately 15 million people

annually in the world and about 700 000 in the United States It is the third leading cause of death and the most common cause of disability in most developed countries Acute Ischemic Injury and Repair in the Nervous System is intended to provide the most up to date knowledge of the mechanisms of neuronal death and repair after stroke It is our belief that this volume of the Handbook of Neurochemistry and Molecular Neurobiology provides an excellent review of the tremendous advances of the past decades in the neurochemical and molecular biological aspects of cerebral ischemia It is hoped that these advances will provide an impetus for basic scientists and clinicians to further their translational research and to promote the insights for development of therapeutic interventions for stroke

Science as Social Knowledge Helen E. Longino,2020-03-31 Conventional wisdom has it that the sciences properly pursued constitute a pure value free method of obtaining knowledge about the natural world In light of the social and normative dimensions of many scientific debates Helen Longino finds that general accounts of scientific methodology cannot support this common belief Focusing on the notion of evidence the author argues that a methodology powerful enough to account for theories of any scope and depth is incapable of ruling out the influence of social and cultural values in the very structuring of knowledge The objectivity of scientific inquiry can nevertheless be maintained she proposes by understanding scientific inquiry as a social rather than an individual process Seeking to open a dialogue between methodologists and social critics of the sciences Longino develops this concept of contextual empiricism in an analysis of research programs that have drawn criticism from feminists Examining theories of human evolution and of prenatal hormonal determination of gender role behavior of sex differences in cognition and of sexual orientation the author shows how assumptions laden with social values affect the description presentation and interpretation of data In particular Longino argues that research on the hormonal basis of sex differentiated behavior involves assumptions not only about gender relations but also about human action and agency She concludes with a discussion of the relation between science values and ideology based on the work of Habermas Foucault Keller and Haraway

Biomedical Index to PHS-supported Research ,1988 *The Neuroimmunological Basis of Behavior and Mental Disorders* Allan Siegel,Steven S. Zalcman,2008-11-09 For many years the immune and central nervous systems

were thought to function independently with little or no interaction between the two. This view has undergone dramatic changes over the past three decades. Indeed, we now know that there exist various feedback loops between the brain and immune systems that impact significantly upon different behavioral processes including normal behavior and mental disorders. Pioneering efforts in generating this change were initiated by a number of early investigators. Included were those whose efforts were directed at establishing neuroimmune connections as well as others whose research focused upon the relationship between immunity, cytokines, and behavior. This book brings together outstanding scientists and clinicians who have made major contributions to the rapidly developing field of investigating the relationship between immunity and behavior. The book is divided into three parts. The first part describes pathways by which the brain and immune systems communicate and interact with each other. In the chapter "Cytokines and the Blood-Brain Barrier" provides insight into interactions between the blood-brain barrier and cytokines. Such interactions underlie basic communication between the immune system and brain that are present in normal as well as in disease conditions. In the chapter "Neurochemical and Endocrine Responses to Immune Activation: The Role of Cytokines" the neurochemical and endocrine consequences of immune challenge and cytokine administration on central neurotransmitter activity are discussed.
