Conservancy area designated in Arizona is dominated by exotic plants and that introduced fish pose a recurrent threat to the native fish of that area. Meanwhile at the Grand Canyon invasives such as tamarisk, red brome, carp and catfish are pervasive either in the Colorado River or in the patches of desert scrub along its shores. Throughout the Sonoran Desert and adjacent areas from islands in the Sea of Cortés to desert grasslands, some six hundred species of non-native plants and animals have become established with bullfrogs and Mediterranean grasses now common where they once never existed. The book brings together contributors from academia, government and nonprofit organizations including such experts as Gary Paul Nabhan, Richard Mack and Alberto B. Riquelme Montijo. They review historic and even prehistoric origins of non-native species, not only exotic plants, amphibians and mammals but also insects, fish and birds. They then examine significant problems in each major subregion and ecosystem and discuss control efforts. The volume contains the first compiled list of more than 500 naturalized exotic species in the Sonoran region. Invasive species issues are rapidly emerging as major environmental concerns both locally and worldwide. This book assists professionals, ecologists, conservation biologists and policy makers involved in invasive species control in the Southwest and will be a rich resource for all concerned with protecting native species and their habitats.
