Functional Metallosupramolecular Materials John

George Hardy,Felix H Schacher,2015-07-13 There is great interest in metallosupramolecular materials because of their use in magnetic photonic and electronic materials Functional Metallosupramolecular Materials focuses on the applications of these materials covering the chemistry underlying the synthesis of a variety of ligands to coordinate various metal ions and the generation of 2D and 3D materials based on these constructs The book starts by looking at different metallosupramolecular systems including naturally occurring functional metallosupramolecular materials DNA based metallosupramolecular materials metallopolymers metallo gels as well as functional materials based on MOFs Subsequent chapters then systematically cover the different applications such as molecular computation spin crossover light harvesting and as photocatalysts for the production of solar fuels The book provides an overview of functional metallosupramolecular materials that will be of interest to graduate students academics and industrial chemists interested in supramolecular chemistry materials science and the materials applications **JACK LONDON: All 22 Novels in One Illustrated Edition**

Linjie Zhi,Yingjie Ma,Debin Kong,Sijia Hao,2025-03-24 This book proposes the systematic classification and exact definition of all the products from graphene functionalization which are illustrated by several representative examples Additionally the corresponding preparation strategies of functionalizing graphene are summarized and are demonstrated by some typical

approaches All the products from graphene functionalization are defined as functionalized graphene materials which fall into two categories functionalized graphene and functionalized graphene composite Functionalized graphene is the product of modifying graphene by tuning its composition framework dimension and morphology and functionalized graphene composites are hybrids of graphene or functionalized graphene with other materials including small molecules polymers metals inorganic compounds and carbon nanotubes CNTs Functionalized graphene materials are prepared through two strategies top down and bottom up each of which has its advantages and shortcomings and includes many corresponding preparation methods The selection of preparation strategies depends on the application requirements as different applications require different types of graphene Both strategies are elucidated with detailed examples through an extensive analysis of the literature Finally the major challenges and perspectives of functionalized graphene materials are discussed
