Nature Of Gold An Environmental History Of The Klondike Gold Rush:

The Nature of Gold Kathryn Morse, 2009-11-23 In 1896 a small group of prospectors discovered a stunningly rich pocket of gold at the confluence of the Klondike and Yukon rivers and in the following two years thousands of individuals traveled to the area hoping to find wealth in a rugged and challenging setting Ever since that time the Klondike Gold Rush especially as portrayed in photographs of long lines of gold seekers marching up Chilkoot Pass has had a hold on the popular imagination In this first environmental history of the gold rush Kathryn Morse describes how the miners got to the Klondike the mining technologies they employed and the complex networks by which they obtained food clothing and tools She looks at the political and economic debates surrounding the valuation of gold and the emerging industrial economy that exploited its extraction in Alaska and explores the ways in which a web of connections among America s transportation supply and marketing industries linked miners to other industrial and agricultural laborers across the country The profound economic and cultural transformations that supported the Alaska Yukon gold rush ultimately reverberate to modern times The story Morse tells is often narrated through the diaries and letters of the miners themselves The daunting challenges of traveling working and surviving in the raw wilderness are illustrated not only by the miners compelling accounts but by newspaper reports and advertisements Seattle played a key role as gateway to the Klondike A public relations campaign lured potential miners to the West and local businesses seized the opportunity to make large profits while thousands of gold seekers streamed through Seattle The drama of the miners journeys north their trials along the gold creeks and their encounters with an extreme climate will appeal not only to scholars of the western environment and of late 19th century industrialism but to readers interested in reliving the vivid adventure of the West s last great gold rush

Mining the Landscape Geraldine Mate, 2022-09-12 Mining was one of the primary elements of colonial enterprise in Australia and a factor in movement on colonial frontiers In the second half of the 19th and early 20th century mining particularly of gold saw transformations of the land itself as well as in the way that people working in mining engaged with the landscape around them Landscape archaeology provides a theoretical perspective that allows an articulation of how people created and understood the place in which they lived and worked The impact of and narrative surrounding gold mining has meant that it has long been a focus of study both historical and archaeological The archaeology of mining has traditionally fallen under the umbrella of industrial archaeology with analyses based on historical economic and technological evidence However this is changing From an industrial focus examining the remnants of mines and associated processing equipment archaeology has progressed towards understandings of the social aspects of mining recognising that people not just equipment occupied these landscapes Nevertheless there remains a separation between industrial technology based studies and purely social household based archaeological studies a division that overlooks the integration of home and livelihood This work addresses these very challenges using a landscape based approach that articulates a nuanced meaning laden and experienced mining landscape Integrating the social and the industrial the case study of Mount Shamrock a gold mining town in Queensland Australia demonstrates how this methodology can enhance our understanding of the past The work presents an integration of social and industrial perspectives in a mining settlement and provides an exemplar in the application of landscape theory to Australian historical archaeology These concepts and approaches developed in an Australian context are of universal interest

Nature and Bureaucracy David Jenkins, 2022-09-08 This book questions how bureaucracies conceive of and consequently interact with nature and suggests that our managed public landscapes are neither entirely managed nor entirely wild and offers several warnings about bureaucracies and bureaucratic mentality One prominent challenge facing scientists policymakers environmental activists and environmentally concerned citizens is to recognize that human influence in the natural world is pervasive and has a long history How we act or choose not to act today will continue to determine the future of the natural world Western style management of nature mediated by economic rationality and state bureaucracies may not be the best strategy to maintain environmental integrity The question is what kinds of human influence conceived of in the widest possible sense will produce ideal environments for future generations The related question is who gets to choose The author approaches the problem of analyzing the mutual influence of human and natural systems from two perspectives as an objective scholar investigating bureaucracies and natural systems from the outside and over the last decade as an inside

practitioner working in various roles in federal land management agencies developing policies and regulations involved in the control of natural systems This book will be of great interest to students and scholars of natural resource management policy and politics and professionals working in environmental management roles as well as policymakers involved in public policy and administration
