Russ, Markus Amann, Rebecca Chaplin-Kramer, James Gerber, Peter Hawthorne, Martin Philipp Heger, Saleh Mamun, Giovanni Ruta, Rafael Schmitt, Jeffrey Smith, Adrian Vogl, Fabian Wagner, Esha Zaveri, 2023-04-14 The great expansion of economic activity since the end of World War II has caused an unprecedented rise in living standards but it has also caused rapid changes in earth systems Nearly all types of natural capital the world's stock of resources and services provided by nature are in decline Clean air abundant and clean water fertile soils productive fisheries dense forests and healthy oceans are critical for healthy lives and healthy economies Mounting pressures however suggest that the trend of declining natural capital may cast a long shadow into the future *Nature's Frontiers Achieving Sustainability Efficiency and Prosperity with Natural Capital* presents a novel approach to address these foundational challenges of sustainability A methodology combining innovative science new data sources and cutting edge biophysical and economic models builds sustainable resource efficiency frontiers to assess how countries can sustainably use their natural capital more efficiently The analysis

provides recommendations on how countries can better use their natural capital to achieve their economic and environmental goals. The report indicates that significant efficiency gaps exist in nearly every country. Closing these gaps can address many of the world's pressing economic and environmental problems: economic productivity, health, food and water security, and climate change. Although the approach outlined in this report will entail demanding policy reforms, the costs of inaction will be far higher.

Reconsideration of Science and Technology II Liu Dachun, Ai Zhiqiang, Yang Huili, 2022-09-30

In reviewing and reconsidering the intellectual history of scientism and antiscientism, the authors assess the process of reasoning and prejudices of these contrasting viewpoints while discussing the repercussions of scientific hegemony and its contemporary criticism. As the second volume of a three-volume set that proposes to reconsider science and technology and explores how the philosophy of science and technology responds to an ever-changing world, this title focuses on ideological trends centering around scientism and anti-scientism since the 19th century. The six chapters look into the emergence of scientism, instrumental reason, scientific optimism, scientific pessimism, scientific crisis, and irrationalism, and finally the deconstruction of scientism. The authors provide insight into the connections and biases of these disparate views and critiques, explore the influences of the hegemony of science and contemporary critique of science, and evaluate the value of postmodernism and deconstructivism. The volume will appeal to scholars and students interested in the philosophy of science and technology, the ideology of scientism and anti-scientism, modernism and postmodernism, Marxist philosophy, and topics related to scientific culture.

Philippe Cullet, University of London, UK. This well-researched book covers a wide spectrum of important issues that are central to investment in natural resources and ultimately economic development of Africa. Francis Botchway and the expert contributors analyse the relationships between good governance and resource management, as well as the existing commercial and financial agreements. The environmental implications of resource exploitation and the international dimensions of the industry are also explored in this insightful study. Each comprehensive and concise contribution highlights the importance of transparency and equity in investment and management of natural resources. *Natural Resource Investment and Africa's Development* is essential material for scholars and students of development, environmental law, international economic law, and dispute resolution, as well as any international investor in natural resources.

Cultural Sustainability and the Nature-Culture Interface Inger Birkeland, Rob Burton, Constanza Parra, Katriina Siivonen, 2018-03-14

As contemporary socio-ecological challenges such as climate change and biodiversity preservation have become more important, the three pillars concept has increasingly been used in planning and policy circles.

as a framework for analysis and action However the issue of how culture influences sustainability is still an underexplored theme Understanding how culture can act as a resource to promote sustainability rather than a barrier is the key to the development of cultural sustainability This book explores the interfaces between nature and culture through the perspective of cultural sustainability A cultural perspective on environmental sustainability enables a renewal of sustainability discourse and practices across rural and urban landscapes natural and cultural systems stressing heterogeneity and complexity The book focuses on the nature culture interface conceptualised as a place where experiences practices policies ideas and knowledge meet are negotiated discussed and resolved Rather than looking for lost unities or an imaginary view of harmonious relationships between humans and nature based in the past it explores cases of interfaces that are context sensitive and which consciously convey the problems of scale and time While calling attention to a cultural or culturalised view of the sustainability debate this book questions the radical nature culture dualism dominating positive modern thinking as well as its underlying view of nature as pre given and independent from human life
