Nature Out Of Place Biological Invasions In The Global Age:

Nature Out of Place Jason Van Driesche, Roy Van Driesche, 2013-04-10 Though the forests are still green and the lakes full of water an unending stream of invasions is changing many ecosystems around the world from productive tightly integrated webs of native species to loose assemblages of stressed native species and aggressive invaders The earth is becoming what author David Quammen has called a planet of weeds Nature Out of Place brings this devastating but overlooked crisis to the forefront of public consciousness by offering a fascinating exploration of its causes and consequences along with a thoughtful and practical consideration of what can be done about it The father and son team of Jason and Roy Van Driesche offer a unique combination of narratives that highlight specific locations and problems along with comprehensive explanations of the underlying scientific and policy issues Chapters examine Hawaii where introduced feral pigs are destroying the islands native forests zebra mussel invasion in the rivers of Ohio the decades long effort to eradicate an invasive weed on the Great Plains and a story about the restoration of both ecological and human history in an urban natural area In depth background chapters explain topics ranging from how ecosystems become diverse to the characteristics of effective invaders to procedures and policies that can help prevent future invasions The book ends with a number of specific suggestions for ways that individuals can help reduce the impacts of invasive species and offers resources for further information By bringing the problem of invasive species to life for readers at all levels Nature Out of Place will play an essential role in the vital effort to raise public awareness of this ongoing ecological crisis

Transforming the Global Biosphere Elliott Maynard, 2000-09

Transforming the Global Biosphere is based on the author's presentations to the World Future Society and was written at the suggestion of Nobel Peace Prize Nominee and former UN Assistant Secretary General Dr Robert Muller The author feels strongly that in order to reverse the presently destructive impacts of Human Technology on the Global Biosphere a Transformative Revolution in Human Consciousness must first take place Such a Magnificent Revolution would take the form of Twelve Futuristic MetaStrategies each of which would represent a Key SocioEcological Paradigm in itself Each chapter of

the book is developed around a MetaStrategy providing examples of the Major Problems as well as Innovative Solutions for reversing these Destructive Trends through selected applications of Unique Alternative Technologies and Strategies Dr Maynard's Twelve MetaStrategies for Planetary Management are essentially a set of enlightened yet effective tools for Creative Thinking and Action They are designed to promote environmentally sustainable future scenarios for the maximum benefit for Humans their Planetary Homeworld and for the Generations Yet to Come In spite of the mounting evidence of environmental damage and disturbance to our Natural Planetary Systems Dr Maynard contends that solutions to these problems are available through insightful applications of Alternative Technologies which can provide Clean Renewable Energy Efficient Non Polluting Transportation Hi Energy Nutrition and Ecologically Appropriate Lifestyles for everyone on Earth To achieve such a meaningful and lasting transformation the author feels we must move rapidly and efficiently beyond the entanglements of 20th Century Thinking and blaze adventurous new pathways into the Future Together we must find the courage to explore the promising applications of alternative leading edge Technologies which often exist outside the boundaries of the Mainstream Scientific Thought Elliott Maynard Blog **Global Ecopolitics** Peter Stoett,2012-05-02

Despite sporadic news coverage of extreme weather international conventions on climate change or special UN days rarely do we participate in a sustained analysis of environmental policy making To remedy this shortcoming and to propel the discussion forward Peter J Stoett provides a concise introduction to environmental governance Through seven case studies Stoett analyzes the ability of international policy to provide environmental protection and discusses the ever present factors of equality sovereignty and human rights integral to these issues While providing a panoramic view of the actors and structures producing these policies Stoett reminds readers that the topic is personal that responsible governance is not solely the charge of governments but of individuals and communities as well **Introduction to Green Chemistry** John Andraos,Albert S. Matlack,2022-03-09

Interest in green chemistry and clean processes has grown so much in recent years that topics such as fluororous biphasic catalysis metal organic frameworks and process intensification which were barely mentioned in the First Edition have become major areas of research In addition government funding has ramped up the development of fuel cells and biofuels This reflects the evolving focus from pollution remediation to pollution prevention Copiously illustrated with more than 800 figures the Third Edition provides an update from the frontiers of the field It features supplementary exercises at the end of each chapter relevant to the chemical examples introduced in each chapter Particular attention is paid to a new concluding chapter on the use of green metrics as an objective tool to demonstrate proof of synthesis plan efficiency and to identify where further improvements can be made through fully worked examples relevant to the chemical industry NEW AND EXPANDED RESEARCH TOPICS Metal organic frameworks Metrics Solid acids for alkylation of isobutene by butanes Carbon molecular sieves Mixed micro and mesoporous solids Organocatalysis Process intensification and gas phase enzymatic reactions Hydrogen storage for fuel cells Reactive distillation Catalysts in action on

an atomic scale UPDATED AND EXPANDED CURRENT EVENTS TOPICS Industry resistance to inherently safer chemistry Nuclear power Removal of mercury from vaccines Removal of mercury and lead from primary explosives Biofuels Uses for surplus glycerol New hard materials to reduce wear Electronic waste Smart growth The book covers traditional green chemistry topics including catalysis benign solvents and alternative feedstocks It also discusses relevant but less frequently covered topics with chapters such as Chemistry of Long Wear and Population and the Environment This coverage highlights the importance of chemistry to everyday life and demonstrates the benefits the expanded exploitation of green chemistry can have for society
