 Wulf,2012-05-01 A thrilling adventure story San Francisco Chronicle that brings to life the astronomers who in the 1700s
 embarked upon a quest to calculate the size of the solar system and paints a vivid portrait of the collaborations rivalries and
 volatile international politics that hindered them at every turn From the author of Magnificent Rebels and New York Times
 bestseller The Invention of Nature On June 6 1761 the world paused to observe a momentous occasion the first transit of
 Venus between the Earth and the Sun in more than a century Through that observation astronomers could calculate the size
 of the solar system but only if they could compile data from many different points of the globe all recorded during the short
 period of the transit Overcoming incredible odds and political strife astronomers from Britain France Russia Germany
 Sweden and the American colonies set up observatories in the remotest corners of the world only to be thwarted by
 unpredictable weather and warring armies Fortunately transits of Venus occur in pairs eight years later they would have
 another opportunity to succeed Thanks to these scientists neither our conception of the universe nor the nature of scientific
