Maturation Phenomenon In Cerebral Ischemia Proceedings:

Maturation Phenomenon in Cerebral Ischemia III Umeo Ito, Cesare Fieschi, Francesco Orzi, Toshihiko Kuroiwa, Igor Klatzo, 2012-12-06 The Maturation Phenomenon described by Ito et al in 1975 3 on the basis of his to logical observations in the hippocampus as well as other portions of the cerebral hemisphere refers to the hours or days of delay in the development of pathological changes in various parameters of ischemic injury following the restoration of blood flow to the ischemic brain There is a direct relationship between the intensity of ischemic insult and the speed and rate of maturation of ischemic injury a lesser intensity being associated with slower and less severe development of the lesions The delayed neuronal death of CA1 pyramidal cells of the hippocampus 8 is a classic example In the cerebral cortex with increasing intensity of the ischemic insult the maturation phenomenon of ischemic injuries intensifies seamlessly from less extensive to more extensive disseminated selective neuronal necrosis DSNN and then further to cerebral infarction upon reaching a critical threshold 1 2 4 6 7 We also have found that following ischemic insults just under the threshold level required to induce infarction only disseminated selective neuronal necrosis DSNN progresses while following ischemic insults at the threshold level initially only DSNN develops followed by the evolution of a gradually enlarging infarcted focus 5 7 The reporting of this phenomenon boosted research in the field as it became evident that ischemic damage is not a sudden event but a process potentially susceptible to therapeutic intervention

Maturation Phenomenon in Cerebral Ischemia U. Ito, T. Kirino, T. Kuroiwa, I. Klatzo, 2012-12-06 It has been well recognized that following an ischemic insult many nerve cells of the brain are not killed outright but may suffer a delayed neuronal death or even recover This led to the concept of maturation phenomenon with its main implication that the maturation of ischemic lesions may provide a window of opportunity i e a period of time when the injury to neuronal elements is still reversible and during which an application of proper therapeutic measures might be successful The symposium on Maturation Phenomenon in Cerebral Ischemia was the first international meeting focussed primarily on this subject and the resulting publication contains presentations and discussions by prominent researchers engaged in this field This book should stimulate further research on potential of brain tissue for recovery and particularly with regard to a functional recovery of neurons suffering from chronic ischemic injury

Advances and Technical Standards in Neurosurgery L. Symon, L. Calliauw, F. Cohadon, J. Lobo Antunes, F. Loew, H. Nornes, E. Pásztor, J. D. Pickard, A. J. Strong, M. G. Yaşargil, 2012-12-06 As an addition to the European postgraduate training system for young neurosurgeons we began to publish in 1974 this series of Advances and Technical Standards in Neurosurgery which was later sponsored by the European Association of Neurosurgical Societies This series was first discussed in 1972 at a combined meeting of the Italian and German Neurosurgical Societies in Taormina the founding fathers of the series being Jean Brihaye Bernard Pertuiset Fritz Loew and Hugo Krayenbühl Thus were established the principles of European co operation which have been born from the European spirit flourished in the European Association and have throughout been associated with

this series The fact that the English language is well on the way to becoming the international medium at European scientific conferences is a great asset in terms of mutual understanding Therefore we have decided to publish all contributions in English regardless of the native language of the authors All contributions are submitted to the entire editorial board before publication of any volume Our series is not intended to compete with the publications of original scientific papers in other neurosurgical journals Our intention is rather to present fields of neurosurgery and related areas in which important recent advances have been made The contributions are written by specialists in the given fields and constitute the first part of each volume

Maturation Phenomenon in Cerebral Ischemia III Umeo Ito,Cesare Fieschi,Francesco Orzi,Toshihiko Kuroiwa,Igor Klatzo,1999-03-25 The maturation phenomenon refers to postischemic changes that develop hours or days following an ischemic insult The delayed neuronal death of CA1 pyramidal cells of the hippocampus is a classic example The report of the phenomenon has boosted research in this field as it became evident that ischemic damage is not a sudden event but a process potentially susceptible to therapeutic intervention In September 1990 the first international symposium on Maturation Phenomenon in Cerebral Ischemia was held in Tokyo The second symposium was organized in Tokyo in March-April 1996 Since then new developments have rapidly delivered information about the molecular nature and dynamics of mechanisms concerning cell death and recovery This book contains the presentations of the 3rd international symposium held in Pozzillo Italy in April 1998 It outlines the present status of the investigation and provides further stimulation for research in this field

Proceedings in Print ,1997 **Brain Ischemic Stroke - From Diagnosis to Treatment** Simone Peschillo,2016-10-14 Stroke is thought to be the second biggest killer worldwide and is responsible for over 5 million deaths per year Several strategies have been developed to enhance treatment of stroke patients Multimodal neuroimaging allows physicians to diagnose and evaluate not only the ischemic core but also the vessel pattern and collateral status Stroke Treatment involves extensive intravenous drug administration Several new drugs with long lasting efficacy are now being tested in randomized clinical trials In this context endovascular treatment is a promising avenue that allows physicians to treat patients in extended time windows especially patients in whom intravenous RTPA has failed A new era has emerged with new devices called stent retrievers and aspiration techniques which have demonstrated higher rates of recanalization and clear superiority over previous devices employed in RCTs The third volume of Frontiers in Neurosurgery presents updated information on ischemic stroke treatment The volume comprehensively covers the epidemiology physiology diagnosis and treatment modalities of stroke Readers will also find key information on diagnosing and treating rare and lesser known causes of stroke as well as notes about new devices and medical procedures to combat ischemic stroke This volume is a useful resource for neurosurgery specialists as well as nurses physiotherapists and

Reulen,2012-12-06 Brain edema is a simple phenomenon an abnormal increase of brain tissue volume by the increase of brain tissue water content However the etiology is not simple and relating to a wide variety of neurological disorders including ischemia trauma tumor hemorrhage and hydrocephalus It is still a major cause of death in the neurological neurosurgical ward This volume is an up to date report on progress in brain edema research diagnosis and treatment including papers presented at the 12th International Symposium on Brain Edema and Brain Tissue Injury in 2002 Major topics include molecular biology and blood brain barrier disorders ischemic and traumatic brain edema imaging and diagnosis of brain edema treatment and radiation effect Various papers in the rapidly growing fields of neuroimaging and molecular medicine are also included **Brain Edema XI** A.D. Somjen,2013-03-13 The articles and short communications in this volume are based on papers pre sented to the Symposium on Cerebral Hypoxia and Stroke held in Budapest in August of 1987 Besides participants at the meeting three scientists who were invited but could not attend have also contributed chapters to this volume A synopsis of the general discussion at the conference and a review chapter conclude this volume To the readers of this book it will not be news that stroke is a worldwide problem Efforts to cope with this often devastating condition are worldwide also as attested by the international membership of the conference It has been said of oxygen deficiency that it not only stops the machine it also wrecks the machinery The paramount question in stroke research is this why can t the brain be restarted after a hypoxic episode in much the same manner as a motor car can when its gas tank is refilled after it stalled because it ran out of fuel Participants at the Symposium had been requested in advance of the meeting to especially consider a series of specific questions in relation to this general problem Among these specific questions were the mechanism of synaptic blockade in hypoxic brain tissue the transition from reversible to irreversible arrest of function the nature of postischemic delayed cell death the possible basic differences in the consequences of hypoxia and ischemia and actual and potential approaches to the prevention and treatment of cell damage in hypoxia and stroke **Brain Edema XIII** Julian T. researchers and clinicians working in this complex and dynamic field
