*NATURAL LANGUAGE PROCESSING IN AI* Balasubramani Murugesan, 2024-09-06 It is not the words themselves that provide the essential power of language rather it is the spaces between the words as well as the order and combination of other words At times meaning may be found under the surface of the words themselves in the intention and feeling that led to the formation of that specific combination of words One of the most important skills for an empathic and emotionally intelligent listener or reader of natural language whether it be human or computer is the ability to comprehend the meaning that lies underneath the actual words 1 As is the case with concepts and thoughts the creation of depth information and complexity is achieved via the links that exist between words Once you have a firm grip on the meaning of individual words and a number of ingenious ways to tie them together the next question is how you can dig underneath them and evaluate the meaning of a combination of words using something that is more flexible than counting the number of n gram matches possible How is it possible to extract meaning and emotion from a string of words which is referred to as latent semantic information so that you can use it for something What s even more ambitious is the question of how to bestow that concealed meaning onto language that was produced by a calculating machine that is cold Even just the term machine generated text evokes a sense of fear since it conjures up images of a hollow tinny voice releasing a broken list of words The argument may be conveyed by machines but they are not capable of much more than that Where are we lacking The manner in which a person communicates the flow of their speech and the personality that you anticipate from them in even the briefest of exchanges The intricacies that are there may be found between the words underneath the words and in the patterns that are produced by the words themselves When a person communicates they will begin to establish patterns in both their voice and their written words The really exceptional authors and public presenters will intentionally exploit these patterns and they will do so to great advantage **Artificial Intelligence for Natural Language Processing** Dhanalekshmi Prasad

NATURAL LANGUAGE PROCESSING Dr. Praveen Kumar Mannepalli,Mrs. Ayesha Khan,Mrs. Parul Khatri,Mrs. Harshita Chourasia,2024-03-15 There is a growing need for the intelligent processing of unstructured text data which includes the extraction of various forms of information from it since the amount of unstructured text data that mankind creates generally on the Internet continues to evolve In order to address a variety of higher level language issues the goal of my study is to create learning models that are capable of independently producing representations of human language namely its structure and meaning my is for the purpose of my thesis When it comes to the delivery of technologies in the field of natural language processing NLP a significant amount of progress has been made These technologies include the extraction of information from large amounts of unstructured data on the internet the analysis of sentiment in social networks and the grammatical analysis of essays for the purpose of grading The creation of universal scalable algorithms that are capable of jointly solving these

problems learning the appropriate intermediate representations of the linguistic units involved is that which is one of the aims of natural language processing. Standard ways to achieving this objective on the other hand suffer from two basic deficiencies.
