Strategies and Tools for a Sustainable Rural Rio de Janeiro Udo Nehren, Sabine Schlüter, Claudia Raedig, Dietmar Sattler, Helga Hissa, 2018-08-16

This book is a compilation of recent developments in land ecosystem and water management in the Brazilian state of Rio de Janeiro. The state is located in the biodiversity hotspot of the Atlantic Forest Mata Atlântica, a biome characterized by high biological diversity and endemism. At the same time, the state of Rio de Janeiro emerged to one of the economic hubs in Latin America. This development process has been accompanied by population growth, industrialization, urbanization, as well as consumption and degradation of land and water resources. In the past years, many efforts have been made to stop or at least slow down these degradation processes and restore degraded environments with the overall goal to bring together sustainable management of natural resources, nature conservation, and economic development. An overview is provided of the different strategies and tools that have been developed in the fields of agriculture, ecosystem management, and biodiversity, integrated water management, land restoration, disaster risk reduction, and climate change adaptation, as well as environmental governance and economic instruments. This book covers a wide spectrum from applied research to science-policy interfaces, planning concepts, and technical tools, and has a model character for other rural areas in Latin America. Target groups are scientists, practitioners, policy makers, and graduate students in the field of environmental management. The different chapters are written by researchers and practitioners of the German-Brazilian project INTECRAL (Integrated Eco-Technologies and Services for a Sustainable Rural Rio de Janeiro), the rural development program Rio Rural, under the state secretary for agriculture and animal husbandry, as well as invited scientists from Brazilian universities and research institutes. It bridges existing gaps between science, policies, and practice in rural development.

Ecological Economics from the Ground Up Hali Healy, Joan Martínez-Alier, Leah Temper, Mariana Walter, Julien-François Gerber, 2013-02-15. *Ecological Economics from the Ground Up* takes a unique and much-needed bottom-up approach to teaching ecological economics and political ecology using case studies that focus on a wide range of internationally relevant topics to teach the principles, concepts, methods, and tools of these fields, which are seen as increasingly important in the context of the current triple social, economic, and environmental crisis. This book provides learning materials which are grounded in the experience of Civil Society Organisations (CSOs) with case studies chosen by CSOs and developed collaboratively with leading ecological economists. The case studies come from Europe, India, Latin America, and Africa and are presented thematically along three lines: 1) social metabolism and accounting methods; 2) institutions and participation; and 3) valuation and environmental policy tools. Core tools, concepts, and glossary terms are embedded in topics chosen as a matter of urgency by activist organizations related to mining and fossil fuel extraction, integrated transport infrastructure development, deforestation, and agro-fuel production, sustainable tourism, waste management, wetlands, and water management, payments for ecosystem services, natural disasters and hazards, and corporate accountability. *Ecological Economics from the Ground Up* has been designed to be an accessible learning aid for students of the sustainability sciences and for those CSOs that have recognised the value that ecological economics and political ecology tools and methods hold for their research and advocacy work. **Pricing the**

Planet Peter Herman May, Peter May, Ronaldo Serôa da Motta, 2000-08-15 An outgrowth of the 1992 Symposium and Exhibit of Environmental Technologies ECOTECH held in Rio de Janeiro as part of the UN Conference on Environment and Development UNCED this book addresses our ecological future and explores alternatives to mainstream solutions

Green Cities Matthew E. Kahn, 2007-04-01 What is a green city What does it mean to say that San Francisco or Vancouver is more green than Houston or Beijing When does urban growth lower environmental quality and when does it yield environmental gains How can cities deal with the environmental challenges posed by growth These are the questions Matthew Kahn takes on in this smart and engaging book Written in a lively accessible style Green Cities takes the reader on a tour of the extensive economic literature on the environmental consequences of urban growth Kahn starts with an exploration of the Environmental Kuznets Curve EKC the hypothesis that the relationship between environmental quality and per capita income follows a bell shaped curve He then analyzes several critiques of the EKC and discusses the implications of growth in urban population and surface area as well as income The concluding chapter addresses the role of cities in promoting climate change and asks how cities in turn are likely to be affected by this trend As Kahn points out although economics is known as the dismal science economists are often quite optimistic about the relationship between urban development and the environment In contrast many ecologists and environmentalists remain wary of the environmental consequences of free market growth Rather than try to settle this dispute this book conveys the excitement of an ongoing debate Green Cities does not provide easy answers complex dilemmas It does something more important it provides the tools readers need to analyze these issues on their own
