Natural Selection In Man:

Descent of Man and Selection in Relation to Sex Charles Darwin, 2004 Excerpt from The Descent of Man and Selection in Relation to Sex The nature of the following work will be best understood by a brief account of how it came to be written During many years I collected notes on the origin or descent of man without any intention of publishing on the subject but rather with the determination not to publish as I thought that I should thus only add to the prejudices against my views It seemed to me sufficient to indicate in the first edition of my Origin of Species that by this work light would be thrown on the origin of man and his history and this implies that man must be included with other organic beings in any general conclusion respecting his manner of appearance on this earth Now the case wears a wholly different aspect When a naturalist like Carl Vogt ventures to say in his address as President of the National Institution of Geneva *personne en Europe au moins n'ose plus soutenir la création indépendante et de toutes pièces des espèces* it is manifest that at least a large number of naturalists must admit that species are the modified descendants of other species and this especially holds good with the younger and rising naturalists The greater number accept the agency of natural selection though some urge whether with justice the future must decide that I have greatly overrated its importance Of the older and honoured chiefs in natural science many unfortunately are still opposed to evolution in every form About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Charles Darwin, 1874 **The Action of Natural Selection on Man** Alfred Russel Wallace, 1871 **The Action of Natural Selection on Man** Alfred Russel Wallace, 1873 **The Descent of Man, and Selection in Relation to Sex** Charles Darwin, 1981

In the current resurgence of interest in the biological basis of animal behavior and social organization the ideas and questions pursued by Charles Darwin remain fresh and insightful This is especially true of The Descent of Man and Selection in Relation to Sex Darwin's second most important work This edition is a facsimile reprint of the first printing of the first edition 1871 not previously available in paperback The work is divided into two parts Part One marshals behavioral and morphological evidence to argue that humans evolved from other animals Darwin shows that human mental and emotional capacities far from making human beings unique are evidence of an animal origin and evolutionary development Part Two is an extended discussion of the differences between the sexes of many species and how they arose as a result of selection Here Darwin lays the foundation for much contemporary research by arguing that many characteristics of animals have evolved not in response to the selective pressures exerted by their physical and biological environment but

rather to confer an advantage in sexual competition These two themes are drawn together in two final chapters on the role of sexual selection in humans In their Introduction Professors Bonner and May discuss the place of *The Descent* in its own time and relation to current work in biology and other disciplines *The Descent of Man, and Selection in Relation to Sex* Charles Darwin, 1871 Provides information about sex relationships and birth control with an emphasis on informed consent and mutual respect and discusses such options as parenthood adoption and abortion *The Origin of Species by means of Natural Selection* Charles Darwin, 2021-08-10 *The Origin of Species by means of Natural Selection* Charles Darwin The Origin is one of the most important books ever published and a knowledge of it should be a part of the intellectual equipment of every educated person The book will endure in future ages so long as a knowledge of science persists among mankind NatureIt took Charles Darwin more than twenty years to publish this book in part because he realized that it would ignite a firestorm of controversy On the Origin of Species first appeared in 1859 and it remains a continuing source of conflict to this day Even among those who reject its ideas however the work s impact is undeniable In science philosophy and theology this is a book that changed the world In addition to its status as the focus of a dramatic turning point in scientific thought On the Origin of Species stands as a remarkably readable study Carefully reasoned and well documented in its arguments the work offers coherent views of natural selection adaptation the struggle for existence survival of the fittest and other concepts that form the foundation of modern evolutionary theory This volume is a reprint of the critically acclaimed first edition **The Role of Natural Selection in Human Evolution** Francisco M. Salzano, 1975 Non Aboriginal material *The Descent of Man* Charles Darwin, 2017-02-17 *The Descent of Man and Selection in Relation to Sex* is a book by English naturalist Charles Darwin first published in 1871 which applies evolutionary theory to human evolution and details his theory of sexual selection a form of biological adaptation distinct from yet interconnected with natural selection The book discusses many related issues including evolutionary psychology evolutionary ethics differences between human races differences between sexes the dominant role of women in mate choice and the relevance of the evolutionary theory to society *The Descent of Man and Selection in Relation to Sex* Charles Darwin, 2020-07-31 Reproduction of the original *The Descent of Man and Selection in Relation to Sex* by Charles Darwin
