Nature Of Photographs:

The Nature of Photographs Stephen Shore, 1998 How does a photograph work In this book internationally acclaimed photographer Stephen Shore brings together more than fifty images by such photographers as Walker Evans Eugne Atget Robert Adams Diane Arbus Frank Gohlke Lee Friedlander Edward Weston Robert Frank William Eggleston and Jan Groover to illustrate a process of looking at and understanding photography He traces the process by which the world in front of the camera is transformed into a photograph and how that photograph in turn is transformed into a mental image A photograph Shore explains can be viewed on several levels First it is a physical object a print On this print is an image an illusion of a window onto the world It is at this level that we read a picture and discover its content a souvenir of an exotic land the face of a lover a wet rock a landscape at night This is the depictive level in which the world is transformed into a photograph through qualities of flatness frame time and focus On a final level is the mental apprehension of the image which joins the focus of lens eye attention and mind Using these levels of seeing Shore reveals how the qualities of a photograph create tension and meaning as the collapsing of depth creates new relationships as lines and shapes in the image play against the frame as focus creates barriers in the depth of an image as the duration of exposure variously transforms the fluid world into a static piece of film As the visual image continues to grow in importance as a medium of global communication the skills and insights conveyed by this book will become increasingly relevant both to those who take photographs and those who view them *The Nature of Photographs* Stephen Shore, 2007
