Nature Of Statistical Learning Theory:

The Nature of Statistical Learning Theory Vladimir Vapnik, 2013-06-29 The aim of this book is to discuss the fundamental ideas which lie behind the statistical theory of learning and generalization. It considers learning as a general problem of function estimation based on empirical data. Omitting proofs and technical details, the author concentrates on discussing the main results of learning theory and their connections to fundamental problems in statistics. These include the setting of learning problems based on the model of minimizing the risk functional from empirical data; a comprehensive analysis of the empirical risk minimization principle including necessary and sufficient conditions for its consistency; non asymptotic bounds for the risk achieved using the empirical risk minimization principle; principles for controlling the generalization ability of learning machines using small sample sizes based on these bounds; the Support Vector methods that control the generalization ability when estimating function using small sample size. The second edition of the book contains three new chapters devoted to further development of the learning theory and SVM techniques. These include the theory of direct method of learning based on solving multidimensional integral equations for density conditional probability and conditional density estimation; a new inductive principle of learning. Written in a readable and concise style, the book is intended for statisticians, mathematicians, physicists and computer scientists. Vladimir N Vapnik is Technology Leader AT T Labs Research and Professor of London University. He is one of the founders of **The Nature of Statistical Learning Theory**. Vladimir N. Vapnik, 2013-04-17 The aim of this book is to discuss the fundamental ideas which lie behind the statistical theory of learning and generalization. It considers learning from the general point of view of function estimation based on empirical data. Omitting proofs and technical details, the author concentrates on discussing the main results of learning theory and their connections to fundamental problems in statistics. These include the general setting of learning problems and the general model of minimizing the risk functional from empirical data; a comprehensive analysis of the empirical risk minimization principle and shows how this allows for the construction of necessary and sufficient conditions for consistency; non asymptotic bounds for the risk achieved using the empirical risk minimization principle; principles for controlling the generalization ability of learning machines using small sample sizes; introducing a new type of universal learning machine that controls the generalization ability. *Statistical Learning Theory* Vladimir Naumovich Vapnik, 1998 A comprehensive look at learning and generalization theory. The statistical theory of learning and generalization concerns the problem of choosing desired functions on the basis of empirical data. Highly applicable to a variety of computer science and robotics fields, this book offers lucid coverage of the theory as a whole. Presenting a method for determining the necessary and sufficient conditions for consistency of learning process, the author covers function estimates from small data pools, applying these estimations to real life problems and much more. Hill, 2018-10-03 Deterministic Learning Theory for Identification Recognition and Control presents a unified conceptual framework for knowledge acquisition representation and knowledge utilization in uncertain dynamic environments It provides systematic design approaches for identification recognition and control of linear uncertain systems Unlike many books currently available that focus on statistical principles this book stresses learning through closed loop neural control effective representation and recognition of temporal patterns in a deterministic way A Deterministic View of Learning in Dynamic Environments The authors begin with an introduction to the concepts of deterministic learning theory followed by a discussion of the persistent excitation property of RBF networks They describe the elements of deterministic learning and address dynamical pattern recognition and pattern based control processes The results are applicable to areas such as detection and isolation of oscillation faults ECG EEG pattern recognition robot learning and control and security analysis and control of power systems A New Model of Information Processing This book elucidates a learning theory which is developed using concepts and tools from the discipline of systems and control Fundamental knowledge about system dynamics is obtained from dynamical processes and is then utilized to achieve rapid recognition of dynamical patterns and pattern based closed loop control via the so called internal and dynamical matching of system dynamics This actually represents a new model of information processing i e a model of dynamical parallel distributed processing DPDP **Multiple Model Estimation Using SVM-based Learning** Yunqian Ma, 2003 Technometrics ,2001 Algorithmic Learning Theory ,2004 **Computational Learning Theory** ,2001 Learning Theory ,2005
