Navies And Shipbuilding Industries The Strained Symbiosis:

Navies and Shipbuilding Industries Michael Lindberg, Daniel Todd, 1996-08-23 The central theme running through this book is the mutual dependence of navies and shipbuilding industries Historically naval ambitions and the ambitions of industrialists converge and a symbiosis is born The technical competence of industry emerges as a key player in determining the effectiveness of navies That industrial capability for its part rests increasingly on the navy as chief customer because progressive specialization renders it more and more unsuited for any other use These trends are universal afflicting the relations of all major navies and their industrial suppliers since the dawn of the modern age They continue to complicate the running of navies today The book enlarges on this fundamental fact explaining why the symbiosis emerged and how it is manifested in the contemporary world

Europe, Small Navies and Maritime Security Robert McCabe, Deborah Sanders, Ian Speller, 2019-09-16 This book seeks to identify and address gaps in our understanding of maritime security and the role of small navies in Europe The majority of Europe's navies are small yet they are often called upon to address a complex array of traditional and non traditional threats This volume examines the role of small navies within the European security architecture by discussing areas of commonality and difference between navies and arguing that it is not possible to fully understand either maritime strategy or European security without taking into account the actions of small navies It contains a number of case studies that provide an opportunity to explore how different European states view the current security environment and how naval policy has undergone significant changes within the lifetime of the existing naval assets In addition the book examines how maritime security and naval development in Europe might evolve given that economic forecasts will likely limit the potential procurement of larger naval assets in the future which means that European states will increasingly have to do more with less in the maritime domain This book will be of much interest to students of maritime strategy naval power strategic studies European politics and international relations in general

been assembled to write authoritative articles in their particular fields of expertise The absorbing text is fully supported by many outstanding images Most Recommended Firetrench Provides a most useful contextual analysis of the post Cold War period explaining how technological developments and a range of world events have variously shaped the fleets of today Warship *India-China Maritime Competition* Rajesh Basrur, Anit Mukherjee, T.V. Paul, 2019-05-03 This edited volume critically examines the concept of the security dilemma and applies it to India China maritime competition Though frequently employed in academic discussion and popular commentary on the Sino Indian relationship the term has rarely been critically analysed The volume addresses the gap by examining whether the security dilemma is a useful concept in explaining the naval and foreign policy strategies of India and China China's Belt and Road Initiative and its expansive engagement in the Indian Ocean Region have resulted in India significantly scaling up investment in its navy adding ships naval aircraft and submarines This volume investigates how the rivalry is playing out in different sub regions of the Indian Ocean and the responses of other powers notably the United States and prominent Southeast Asian states Their reactions to the Sino Indian rivalry are an underexplored topic and the chapters in this book reveal how they selectively use that rivalry while trying to steer clear of making definite choices The book concludes with recommendations on mitigating the security dilemma This work will be of great interest to students of strategic studies international relations maritime security and Asian politics

Shipbuilding and Ship Repair Workers around the World Raquel Varela, Hugh Murphy, Marcel Linden, 2025-10-01 Maritime trade is the backbone of the world's economy Around ninety percent of all goods are transported by ship and since World War II shipbuilding has undergone major changes in response to new commercial pressures and opportunities Early British dominance for example was later undermined in the 1950s by competition from the Japanese who have since been overtaken by South Korea and most recently China The case studies in this volume trace these and other important developments in the shipbuilding and ship repair industries as well as workers responses to these historic transformations

Planning and Profits Christopher W. Miller, 2018 This book examines the relationship between the private naval armaments industry businessmen and the British government defence planners between the wars It reassesses the concept of the Military Industrial Complex through the impact of disarmament upon private industry the role of leading industrialists in supply and procurement policy and the successes and failings of government organisation It blends together political naval and business history in new ways and by situating the business activities of industrialists alongside their work as government advisors sheds new light on the operation of the British state In a time of great need for Britain a small coterie of influential businessmen gained access to secret information on industrial mobilisation as advisers to the Principal Supply Officers Committee They provided the state with priceless advice but as insiders utilised their access to information to build a business empire at a fraction of the normal costs Outsiders in contrast lacked influence and were forced together into a defensive ring or cartel which effectively fixed prices for British warships By the 1930s the cartel grew into one of the most

sophisticated profiteering groups of its day This is the story of how these men profited while effectively saving the National Government from itself *Geopolitics and Maritime Security* Frank Bekkers, Patrick Bolder, Esther Chavannes, Willem Oosterveld, Rob de Wijk, Jan Frederik Braun, 2019-06-28 This report contains the results from a research project aimed at identifying new capabilities for the future Royal Netherlands Navy RNLN With the type of naval operations and tasks for the period up to 2030 35 largely enduring the current regional power projection profile of the Royal Netherlands Navy RNLN must be strengthened and renewed We envisage the core of the future naval force to remain a versatile mix of surface and sub surface combatants shipborne helicopters and unmanned systems for intelligence purposes and extended force projection modern amphibious forces and long range land attack capability to counter Anti Access and Area Denial A2AD threats All main vessels should be ocean going able to navigate the main operating theaters in the European seas and the Carib under all conditions But even while we expect that naval operations and tasks as well as the overall force profile of the RNLN will evolve rather than drastically change the RNLN must substantially innovate but not beyond recognition its personnel materiel doctrines and processes organization and structures **Renew Orleans?** Aaron Schneider, 2018-03-27 Urban development after disaster the fading of black political clout and the onset of gentrification Like no other American city New Orleans since Hurricane Katrina offers powerful insight into issues of political economy in urban development and in particular how a city s character changes after a disaster that spurs economic and political transition In New Orleans the hurricane upset an existing stalemate among rival factions of economic and political elites and its aftermath facilitated the rise of a globally oriented faction of local capital In *Renew Orleans* Aaron Schneider shows how some city leaders were able to access fragmented local institutions and capture areas of public policy vital to their development agenda Through interviews and surveys with workers and advocates in construction restaurants shipyards and hotel and casino cleaning Schneider contrasts sectors prioritized during post Katrina recovery with neglected sectors The result is a fine grained view of the way labor markets are structured to the advantage of elites emphasizing how dual development produces wealth for the few while distributing poverty and exclusion to the many on the basis of race gender and ethnicity Schneider shows the way exploitation operates both in the workplace and the community tracing working class resistance that joins struggles for dignity at home and work In the process working classes and popular sectors put forth their own alternative forms of development Brown-, Green- and Blue-Water Fleets Michael Lindberg, Daniel Todd, 2001-11-30 From riverine operations in the American Civil War and China in the 1860s to the major fleet engagements of the World Wars plus more recent naval actions in the Falklands Malvenas War and Gulf War Lindberg and Todd methodically show how geography has shaped the strategy tactics and tools of naval warfare Alfred T Mahan was perhaps the first naval professional to recognize and acknowledge fully the influence of geography on navies and naval warfare Many of his principles of seapower were inherently geographical and influenced both what kind of naval force a state would possess and how it would be utilized In

the time that has passed since Mahan made his observations naval warfare and navies have experienced major technological changes yet geographical factors continue to exert their influence on how navies fight how they are structured and the design of the ships that they deploy After providing a comprehensive review of geostrategic theory and its application to naval warfare the book is organized by major operational environments in which such warfare occurs the high seas littoral regions and inland waterways Lindberg and Todd illustrate how such geographical factors as distance location surface and subsurface conditions influence naval operations including fleet to fleet engagements amphibious assault coastal defense logistical support and riverine actions A separate chapter takes an in depth look at the ways in which geography influences navies themselves with issues such as primary mission type force structure development and ship design Through the use of historical case studies this volume applies long held geographical concepts to fundamental naval theories and practices to illustrate just how pervasive geography s influence has been during the past 140 years *Bridging the Seas* Larrie D.

Ferreiro, 2020-01-21 How the introduction of steam iron and steel required new rules and new ways of thinking for the design and building of ships In the 1800s shipbuilding moved from sail and wood to steam iron and steel The competitive pressure to achieve more predictable ocean transportation drove the industrialization of shipbuilding as shipowners demanded ships that enabled tighter scheduling improved performance and safe delivery of cargoes In *Bridging the Seas* naval historian Larrie Ferreiro describes this transformation of shipbuilding portraying the rise of a professionalized naval architecture as an integral part of the Industrial Age Picking up where his earlier book *Ships and Science* left off Ferreiro explains that the introduction of steam iron and steel required new rules and new ways of thinking for designing and building ships The characteristics of performance had to be first measured then theorized Ship theory led to the development of quantifiable standards that would ensure the safety and quality required by industry and governments and this in turn led to the professionalization of naval architecture as an engineering discipline Ferreiro describes among other things the technologies that allowed greater predictability in ship performance theoretical developments in naval architecture regarding motion speed and power propellers maneuvering and structural design the integration of theory into ship design and construction and the emergence of a laboratory infrastructure for research
