Complexity and Creative Capacity Kelly Chapman,2015-11-06 Complexity theories gained prominence in the 1990s with a focus on self organising and complex adaptive systems Since then complexity theory has become one of the fastest growing topics in both the natural and social sciences and touted as a revolutionary way of understanding the behaviour of complex systems This book uses complexity theory to surface and challenge the deeply held cultural assumptions that shape how we think about reality and knowledge In doing so it shows how our traditional approaches to generating and applying knowledge may be paradoxically exacerbating some of the wicked environmental problems we are currently facing The author proposes an innovative and compelling argument for rejecting old constructs of knowledge transfer adaptive management and adaptive capacity The book also presents a distinctively coherent and comprehensive synthesis of cognition learning knowledge and organizing from a complexity perspective It concludes with a reconceptualization of the problem of knowledge transfer from a complexity perspective proposing the concept of creative capacity as an alternative to adaptive capacity as a measure of resilience in socio ecological systems Although written from an environmental management perspective it is relevant to the broader natural sciences and to a range of other disciplines including knowledge management organizational learning organizational management and the philosophy of science

principal actors in the environment society nexus Aimed at an international audience of academics research students researchers practitioners and policy makers The SAGE Handbook of Environment and Society presents readers in social science and natural science with a manual of the past present and future of environment society links 5th International Marine Conservation Congress E. Christien Michael Parsons,Edward Jeremy Hind-Ozan,Leslie Cornick,Mariana Padron,Jason Paul Landrum,2022-03-29 Contested Forms of Governance in Marine Protected Areas Natalie Bown,Tim S. Gray,Selina M. Stead,2013-01-17 In this book the authors examine the governance of marine protected areas MPA and in particular they compare two different forms of governance co management CM and adaptive co management ACM CM is characterized by the decentralization of the decision making process incorporating the governed as well as the government ACM is characterized by the dynamic process whereby co management decision making is made continuously responsive to the changing ecological and socio economic circumstances of the MPA The authors carry out a comprehensive critical analysis of CM and ACM before applying these concepts to the case study of the Cayos Cochinos Marine Protected Area off Honduras to assess two successive management cycles 2004 9 and 2008 13 The area was designated as an MPA in 1993 a governmental decision which was met with resentment by local communities CM was introduced in 2004 to involve these local stakeholders in the decision making process but achieved limited success In an attempt to deal with these deficiencies ACM was adopted in the second management plan in 2008 but whereas the position of the local communities improved it tipped the scales too far away from conservation A third management plan is currently being prepared that promises to strike a better balance between ecological and socio economic objectives A central theme of the book is to examine how far the CCMPA adhered to the principles of CM and ACM respectively in its first two management plans **Routledge Handbook of Environmental Anthropology** Helen Kopnina,Eleanor Shoreman-Ouimet,2016-08-12 Environmental Anthropology studies historic and present human environment interactions This volume illustrates the ways in which today s environmental anthropologists are constructing new paradigms for understanding the multiplicity of players pressures and ecologies in every environment and the value of cultural knowledge of landscapes This Handbook provides a comprehensive survey of contemporary topics in environmental anthropology and thorough discussions on the current state and prospective future of the field in seven key sections As the contributions to this Handbook demonstrate the subfield of environmental anthropology is responding to cultural adaptations and responses to environmental changes in multiple and complex ways As a discipline concerned primarily with human environment interaction environmental anthropologists recognize that we are now working within a pressure cooker of rapid environmental damage that is forcing behavioural and often cultural changes around the world As we see in the breadth of topics presented in this volume these environmental challenges have inspired renewed foci on traditional topics such as food procurement ethnobiology and spiritual ecology and a broad new range of subjects such as resilience nonhuman rights architectural anthropology industrialism and education This volume enables scholars and

students quick access to both established and trending environmental anthropological explorations into theory methodology and practice Innovative Built Heritage Models Koenraad van Balen, Aziliz Vandesande, 2018-01-29 Several international and European institutions have given increasing importance to sustainable approaches to our existing building stock and the role of built heritage in this process At the same time preventive and planned conservation of built heritage has been increasingly recognised by researchers given its cost effectiveness for owner managers effective long term quality protection and environmental enhancement of structures as well as its potential of activating heritage in the employment sector and empowering of local communities Innovative Built Heritage Models collects the lectures presented at the international conference on CHANGES 2017 Thematic Week Leuven Belgium 6 8 February 2017 The aim of the conference was to provide an international overview of the existing strategies processes and operational case studies that support the implementation of a preventive and planned conservation approach in the built heritage sector The conference twins with the CHANGES project supported by the Joint Programming Initiative Heritage Plus programme This publication meets the increasing demand for shared information to support the transition towards a more sustainable conservation process The volume consists of three main parts The CHANGES paradigm Preventive and planned conservation and Case studies of Change The book reflects on CHANGES in a straightforward manner by providing research and case studies that serve as baseline records guidance and essential literature for researchers and practitioners involved in the built heritage sector
