Abstract

Background—The United States has a complex healthcare system that is undergoing substantial reformations. There is a need for high-quality, economic evaluations of nursing practice. An updated review of completed economic evaluations relevant to the field of nursing within the U.S. healthcare system is timely and needed.

Objectives—The purpose of this study was to evaluate and describe the quantity and quality of economic evaluations in nursing-relevant research performed in the U.S. between 1997 and 2015.

Methods—Four databases were searched. Titles, abstracts, and full-text content were reviewed to identify studies that analyzed both costs and outcomes, relevant to nursing, performed in the U.S.,

Growth and Transformation of Emerging Powers Yao Ouyang, Xianzhong Yi, Lingxiao Tang, 2019-11-08 This book offers a quantitative and qualitative look at the much discussed BRICS Brazil Russia India China and South Africa and explores how their economic ascent might cause global economic realignments in the 21st century Providing a Chinese perspective on how the global realignment might impact strategic choices and a data driven approach to the similarities and differences within the so called BRICS group this book will be of great interest to economists international banking professionals and political forecasters Progress in Economics Research Albert Tavidze, 2007-04 This series spans the globe presenting leading research in economics It is perhaps a sign of the times that economic weapons such as sanctions seem to be as powerful as or more so than tanks International applications and examples of economic progress are invaluable in a troubled world with economic booms bursting like so many penny balloons Globalisation outstanding and jobless recoveries present economic issues of concern to millions **The Use of Social Research in Federal Domestic Programs** United States. House. Committee on Government Operations. Research and Technical Programs Subcommittee, 1967 **Towards a Better Global Economy** Franklin Allen, Jere R. Behrman, Nancy Birdsall, Shahrokh Fardoust, Dani Rodrik, Andrew Steer, Arvind Subramanian, 2014-09-04 Substantial progress in the fight against extreme poverty was made in the last two decades But the slowdown in global economic growth and significant increases in income inequality in many developed and developing

countries raise serious concerns about the continuation of this trend into the 21st century. The time has come to seriously think about how improvements in official global governance coupled with and reinforced by rising activism of global citizens can lead to welfare enhancing and more equitable results for global citizens through better national and international policies. This book examines the factors that are most likely to facilitate the process of beneficial economic growth in low middle and high income countries. It examines past present and future economic growth demographic changes the hyperglobalization of trade the effect of finance on growth climate change and resource depletion and the sense of global citizenship and the need for global governance in order to draw longer term implications identify policy options for improving the lives of average citizens around the world and make the case for the need to confront new challenges with truly global policy responses. The book documents how demographic changes convergence and competition are likely to bring about massive shifts in the sectoral and geographical composition of global output and employment as the center of gravity of the global economy moves toward Asia and emerging economies elsewhere. It shows that the legacies of the 2008-09 crisis high unemployment levels massive excess capacities and high debt levels are likely to reduce the standard of living of millions of people in many countries over a long period of adjustment and that fluctuations in international trade financial markets and commodity prices as well as the tendency of institutions at both the national and international level to favor the interests of the better off and more powerful pose substantial risks for citizens of all countries. The chapters and their policy implications are intended to stimulate public interest and facilitate the exchange of ideas and policy dialogue.

Agency, Gender and Economic Development in the World Economy 1850-2000 Jan Luiten van Zanden, Auke Rijpma, Jan Kok, 2017-07-14 How has agency or the ability to define and act upon one's goals contributed to global long term economic development during the last 150 years? This book asserts that autonomous decision making and female agency in particular increases the potential of a society to generate economic growth and improve its institutions. Inspired by Amartya Sen's capabilities approach and looking at this in comparison to contemporary economic theory the collection of chapters tackles the issue of agency from the micro level of household and family formation and asks how this applies to gender at regional and state level. It brings to the fore new empirical data from across the globe to test the links between family systems female agency human capital formation political institutions and economic development and puts these into broader historical context. It will appeal to scholars researching social policy gender studies economic history development studies and philosophy as well anyone with interests in the long term societal development of the world economy and issues of global inequality.

Economic Growth and Development Sibabrata Das, Alex Mourmouras, Peter Rangazas, 2018-08-16 This text is an introduction to the newer features of growth theory that are particularly useful in examining the issues of economic development. Growth theory provides a rich and versatile analytical framework through which fundamental questions about economic development can be examined. Structural transformation in which developing countries transition from traditional production in largely rural

areas to modern production in largely urban areas is an important causal force in creating early economic growth and as such is made central in this approach Towards this end the authors augment the Solow model to include endogenous theories of saving fertility human capital institutional arrangements and policy formation creating a single two sector model of structural transformation Based on applied research and practical experiences in macroeconomic development the model in this book presents a more rigorous quantifiable and explicitly dynamic dual economy approach to development Common microeconomic foundations and notation are used throughout with each chapter building on the previous material in a continuous flow Revised and updated to include more exercises for guided self study as well as a technical appendix covering required mathematical topics beyond calculus the second edition is appropriate for both upper undergraduate and graduate students studying development economics and macroeconomics
