Exciting photographs of each of the species in its natural habitat, 17 in color, and drawings of animal tracks are especially useful for identification, and a glossary and a bibliography provide definitions and references for the serious reader. The Princeton Field Guide to Prehistoric Mammals Donald R. Prothero, 2016-12-06. The ultimate illustrated guide to the lost world of prehistoric mammals. After the mass extinction of the dinosaurs 65 million years ago, mammals became the dominant terrestrial life form on our planet. Roaming the earth were spectacular beasts such as saber-toothed cats, giant mastodons, immense ground sloths, and gigantic giraffe-like rhinoceroses. Here is the ultimate illustrated field guide to the lost world of these weird and wonderful prehistoric creatures. A woolly mammoth probably won't come thundering through your vegetable garden any time soon. But if one did, this would be the book to keep on your windowsill next to the binoculars. It covers all the main groups of fossil mammals, discussing taxonomy and evolutionary history and providing concise accounts of the better known genera and species, as well as an up-to-date family tree for each group. No other book presents such a wealth of new information about these animals: what they looked like, how they behaved, and how they were interrelated. In addition, this unique guide is stunningly illustrated throughout with full-color reconstructions of these beasts, many never before depicted, along with photographs of amazing fossils from around the world. Provides an up-to-date guidebook to hundreds of extinct species, from saber-toothed cats to giant mammoths. Features a wealth of color illustrations, including new reconstructions of many animals never before depicted. Demonstrates evolution in action, such as how whales evolved from hoofed mammals and how giraffes evolved from creatures with short necks. Explains how mass extinctions and climate change affected mammals, including why some mammals grew so huge.
