Microvascular Research: Biology and Pathology, Two-Volume Set David Shepro,2005-11-03 The microvasculature refers to the smallest blood vessels arterial and venous that nurture the tissues of each organ Apart from transport they also contribute to the systematic regulation of the body In everyday terminology the microcirculation is where the action is Microcirculation is directly involved in such disease states as Alzheimers inflammation tumor growth diabetic retinopathy and wound healing plus cardiovascular fitness is directly related to the formation of new capillaries in large muscles *Microvascular Research* is the first book devoted exclusively to this vital systemic component of the cardiovascular

system and provides up to date mini reviews of normal functions and clinical states The contributing authors are senior scientists with international reputation in their given disciplines This two volume set is a broad interdisciplinary work that encompasses basic research and clinical applications equally Broad coverage of both basic and clinical aspects of microvasculature research Contains 167 chapters from over 300 international authors Each chapter includes key figures and annotated references

Hormones and the Heart in Health and Disease Leonard Share,1999-06-01 The maintenance of arterial blood pressure and the distribution of blood flow to the various organs of the body depends on the control of the pumping action of the heart and of the resistance of the vascular beds in the individual organs in accordance with their metabolic needs These controls are achieved through the integrated actions of circulating hormones humoral factors that are synthesized and released in the heart and blood vessels and the autonomic nervous system The heart however is not only the target for the direct and indirect actions of a number of hormones and humoral factors it is also an endocrine organ in the traditional sense synthesizing and secreting into the circulation chemical factors that act at distant sites In this treatise *Hormones and the Heart in Health and Disease* we interpret endocrinology broadly and consider traditional hormones as well as autocoids that are secreted by the heart or that act on it In this overview the relevant chapters are indicated in parentheses The discovery of atrial natriuretic peptide ANP atrial natriuretic factor ANF in the 1980s indicated that the heart does indeed function as an endocrine organ in the classic sense ANP Chapter I is synthesized in the heart and secreted into the circulation for actions on the kidney where it is a potent natriuretic agent and on the vasculature where it causes vasodilation ANP can also affect myocardial contractility

Local Control of Microvascular Perfusion Michael Hill,Michael Davis,2012-10-01 Local control of microvascular perfusion refers to the ability of individual tissues to maintain a relative constancy of hemodynamics in the face of changing perfusion pressure while meeting metabolic demands appropriately The regulation of local blood flow or autoregulation and its underlying mechanisms have been a subject of considerable interest for over 100 years Particular focus has been placed on the acute interaction of myogenic pressure induced and metabolic local production of vasodilator metabolites parameters and how they interact with flow shear stress dependent and conduction based mechanisms to produce integrated local vascular network responses for example as seen during reactive and functional hyperemia This monograph discusses each of these vasoregulatory phenomena while also considering evidence for their underlying cellular mechanisms Further an attempt is made to integrate the information into complex in vivo situations and consider their relevance to pathophysiological situations

Thermoregulation Part I ,2018-11-16 Thermoregulation Part I From Basic Neuroscience to Clinical Neurology Volume 154 not only reviews how body temperature regulation changes in neurological diseases but also how this aspect affects the course and outcomes of each disease Other sections of the volume review three therapeutic approaches that are aimed at manipulating body temperature including induced hypothermia induced hyperthermia and antipyretic therapy The book is comprised of nine sections across two volumes five dealing with the basic aspects of body temperature regulation and four dealing with the clinical aspects Basic sections cover the Thermoregulation system Thermoreceptors Thermoexecutors Neural pathways and Thermoregulation as a homeostatic function In addition the book covers the physiology and neuroanatomy of the thermoregulation system and provides descriptions of how the regulation of body temperature intervenes with other physiological functions such as sleep osmoregulation and immunity stress exercise and aging Basic sections serve as an introduction to the four clinical sections Body Temperature Clinical Significance Abnormal Body Temperature Thermoregulation in Neurological Disease and Therapeutic Interventions Presents a clear logical pathway from the

fundamental physiology of thermoregulation through neurobiology to clinical applications and disease Enables researchers and clinicians to better understand the value of temperature measurement in disease and the use of temperature as a therapy Integrates content from a broad field of research including topics on the molecular physiology of temperature receptors to the management of accidental hypothermia The Physiological Basis of Rehabilitation Medicine John A. Downey, Stanley J. Myers, Erwin G. Gonzalez, 2013-10-22 The Physiological Basis of Rehabilitation Medicine Second Edition presents a comprehensive examination of the management of patients with functional impairments due to disease or trauma It discusses the distinction between disabilities and impairments per se It addresses the method in which the human body adapts and compensates for the stress produced by physical injuries Some of the topics covered in the book are the physiology of cerebellum and basal ganglia description of upper and lower motor neurons anatomy of the vascular supply to the brain characteristics of the autonomic nervous system structure chemistry and function of skeletal muscle the receptors in muscle and cardiopulmonary physiology The role of muscle spindles in perception of limb position and movement is fully covered An in depth account of the physiology of synovial joints and articular cartilage are provided The cellular and glandular components of the skin are completely presented A chapter is devoted to the factors involve in wound healing Another section focuses on the nerve conduction and neuromuscular transmission The book can provide useful information to doctors dermatologists students and researchers *Diabetes and Cardiovascular Disease* Michael T. Johnstone, Aristidis Veves, 2007-10-28 The cause of diabetes mellitus is metabolic in origin However its major clinical manifestations which result in most of the morbidity and mortality are a result of its vascular pathology In fact the American Heart Association has recently stated that from the point of view of cardiovascular medicine it may be appropriate to say diabetes is a cardiovascular disease 1 But diabetic vascular disease is not limited to just the macrovasculature Diabetes mellitus also affects the microcirculation with devastating results including nephropathy neuropathy and retinopathy Diabetic nephropathy is the leading cause of end stage renal disease in the United States while diabetic retinopathy is the leading cause of new onset blindness in working age Americans The importance of this text on Diabetes and Cardiovascular Disease is evident by the magnitude of the population affected by diabetes mellitus Over 10 million Americans have been diagnosed with diabetes mellitus while another 5 million remain undiagnosed The impact from a public health perspective is huge and increasing As the population of the United States grows older more sedentary and obese the risk of developing diabetes and its complications will increase Epidemiological studies have identified diabetes mellitus as a major independent risk factor for cardiovascular disease Over 65% of patients with diabetes mellitus die from a cardiovascular cause The prognosis of patients with diabetes mellitus who develop overt clinical cardiovascular disease is much worse than those cardiovascular patients free of diabetes mellitus
