Product Data Exchange:

An Introduction to Product Data Exchange Jane Perkins, 1990

Product Data Exchange Susan Bloor, 1995-11-30

This book charts the advances in product data exchange from the early days of computer aided design and engineering to the very latest developments in computer standards including STEP. It will be of use to anyone engaged in the key area of data exchange and communications at the interface of computing and engineering technologies. The necessity of communication and exchange standards is one common throughout the computing world. In the domain of engineering product data the demands are made more complex by the need to preserve large amounts of precise graphical and geometrical information in addition to more conventional data. In this book the authors describe three generations of international initiatives to produce powerful exchange media. As well as describing the process of evolution and development of the major standards the book also outlines the technical challenges faced in product data exchange in a variety of formats and application areas. The book describes developments from IGES through to the 1994 publication of STEP. Related standards in OSI, electrical engineering, office documentation, invoicing and graphics are also covered with respect to their impact on product data exchange. This will be an invaluable sourcebook for engineers addressing issues of product data design management and exchange in both an academic and industrial setting.

The Internet of Products Robert Neumann, 2012-11-27

This study approaches the difficult problem of providing Internet users with a completely transparent view on electronic markets from a product information accessibility point of view. Robert Neumann analyzes economic, ecological and societal gains of openly accessible product information in the form of theoretical models. Though many aspects of very different research disciplines have to be investigated to gain a holistic view on the Internet of Products, this thesis reduces the range of involved research topics to product information discoverability related questions.

Setup Planning for Machining Manjuri Hazarika, Uday Shanker Dixit, 2014-11-27

Professionals as well as researchers can benefit from this comprehensive introduction into the topic of setup planning which reflects the latest state of research and gives hands on examples. Starting with a brief but thorough introduction, this book explains the significance of setup planning in process planning and includes a reflection on its external constraints. Step by step the different phases of setup planning are outlined and traditional as well as modern approaches such as fuzzy logic based setup planning on the solution of setup planning problems are presented. Three detailed examples of applications provide a clear and accessible insight into the up to date techniques and various approaches in setup planning.

StarBriefs 2001, 2012-12-06 This compilation probably looks like one of the craziest things a human being could spend his or her time on Yet nobody would wonder at someone taking a short walk every day after twenty five years that person would have covered a surprisingly long distance This is exactly the story behind this list which appeared first as a few pages within the directory StarGuides or whatever name it had at that time and as a distinct sister publication since 1990 The idea behind this dictionary is to offer astronomers and related space scientists practical assistance in decoding the numerous abbreviations acronyms contractions and symbols which they might encounter in all aspects of the vast range of their professional activities including traveling Perhaps it is a bit paradoxical but if scientists quickly grasp the meaning of an acronym solely in their own specific discipline they will probably encounter more difficulties when dealing with adjacent fields It is for this purpose that this dictionary might be most often used Scientists might also refer to this compilation in order to avoid identifying a project by an acronym which already has too many meanings or confused definitions

Advanced Design and Manufacturing Based on STEP Xun Xu, Andrew Yeh Ching Nee, 2009-09-29 Design and manufacturing is the essential element in any product development lifecycle Industry vendors and users have been seeking a common language to be used for the entire product development lifecycle that can describe design manufacturing and other data pertaining to the product Many solutions were proposed the most successful being the Standard for Exchange of Product model STEP STEP provides a mechanism that is capable of describing product data independent from any particular system The nature of this description makes it suitable not only for neutral file exchange but also as a basis for implementing sharing and archiving product
