Proceedings of the Sixth International Conference on Luminescent Materials, 1998      *Persistent Luminescence* Vijay Kumar, Irfan Ayoub, Yogendra Kumar Mishra, Hendrik C. Swart, 2024-09-01 This book presents the fundamental and applied properties of different phosphor materials that exhibit the phenomenon of persistent luminescence PerLum PerLum offers a solution for the limitations of existing fluorescent probes with new lanthanide based materials for in vivo bio imaging and demonstrates

the practical applications of these materials The book offers a basic understanding of PerLum different mechanisms models related spectroscopic techniques and a few applications essential for anyone interested in learning about PerLum materials This is partly due to the fact that the property of long lasting luminescence is closely associated with other properties and functionalities which besides being essential for many technological applications such as bioimaging and biosensing involve in depth physics and chemistry Although the concept of luminescence has been explored for many decades the different types of luminescence have always led to versatile breakthroughs in different fields of science and technology Among the same is one more well established phenomenon known as PerLum which is characterized by the maintenance of luminescence for periods ranging from minutes to hours in the absence of an external excitation source Because of their remarkable properties an enormous number of PerLum materials have been developed and are now widely used in a variety of fields particularly bioimaging biosensing therapeutics etc Wide-Gap Luminescent Materials: Theory and Applications Stanley R.

Rotman,2013-11-27 Electro optic devices based on doped wide band materials are present in industrial uses in military applications and in everyday life Whether one engages in laser surgery with a neodymium Y AG laser or one communicates overseas using optical fibers the development of these materials is both scientifically and commercially of great interest Much of the most innovative work has been done in the last 15 years in this area A minor revolution in optical fiber communications has occurred with the development of erbium doped fiber amplifiers Solid state laser development shifted into high gear with the theoretical and experimental study of doubly doped garnet lasers Recent developments on semiconductor laser arrays are making diode pumped solid state lasers commercially feasible The purpose of this book is to detail these developments and to point out that many of the same underlying physical processes control advances in several diverse applications For example the basic science of energy transfer will be discussed by Zharikov et al and Rotman for energy transfer and dopant defect interactions respectively it will also be crucial in understanding cerium doped scintillators neodymium chromium lasers and up conversion fiber lasers As another example phonon induced non radiative relaxation will appear in every chapter in this book **Contributions from the Biological Laboratories in Princeton University**
