**Epidemiology, screening and diagnosis of lung cancer** Yutong He, Xue Qin Yu, Chen Wanqing, Jackilen Shannon, Yingsong Lin, 2023-05-08

*Improving Exercise Testing Methods and Interpretation in Human Health and Diseases* Mathieu Gruet, Leonardo Alexandre Peyré-Tartaruga, Martin Behrens, 2023-11-28 Exercise testing is a versatile tool for health purposes When used in combination with specific devices and sensors it can provide valuable diagnostic and prognostic information in a wide range of populations Exercise testing outcomes are also useful for training prescriptions and defining responses to clinical trials evaluating interventions Whole body maximal tests e g cardiopulmonary exercise testing field tests e g walking tests and modalities isolating a muscle group e g isokinetic endurance testing all have their advantages and limits and should be viewed as complementary Recent advances in wearable technology and artificial intelligence provide unique opportunities to broaden the application of these tests and facilitate their interpretation In the meantime the clinimetric properties of some widely used exercise tests are still poorly documented in several clinical populations which hampers optimal diagnosis and management Moreover most exercise tests used in clinical practice are

suffering from a lack of ecological validity and there is a need to develop and valid new testing modalities that best mimic daily life functioning This Research Topic aims to extend our knowledge regarding the validity and clinical utility of various exercise testing modalities and facilitate their interpretation This topic supports a multimodal approach to exercise testing and welcomes reports investigating either whole body or local muscle testing Submission of research combining different exercise modalities and investigating their potential links are particularly encouraged Inter disciplinary research with studies integrating concepts tools and data from various disciplines like exercise physiology biomechanics and psychology are of particular interest for this Research Topic This topic is not restricted in terms of age medical conditions or type of disease but manuscripts must have clear implications for human health

**PET Imaging of Thoracic Disease, An Issue of PET Clinics** Drew A. Torigian, Abass Alavi, 2011-07-28 PET imaging has been used for the assessment of lung cancer for several years for diagnosis staging and post treatment follow up Expanded applications are now being used and explored in the imaging of the heart thoracic vascular disease and chest wall disorders This issue provides an up to date review of the uses of PET for oncologic and nononcologic diseases of the thorax
