Mathematical Planning Of Structural Dec:

Structural Design Applications of Mathematical Programming Techniques North Atlantic Treaty Organization. Advisory Group for Aerospace Research and Development. Structures and Materials Panel,1971 The document describes the present state of development of the use of mathematical programming techniques in the optimum design of aerospace and similar structures Although optimization with respect to cost is considered when possible the main emphasis is on the minimization of weight due to the overwhelming importance of this parameter in aerospace applications and also due to the fact that it is one of the few merit functions that can be defined with reasonable precision The use of mathematical programming techniques in the selection of materials is also discussed to the limited extent meaningful at the present time Author

Mathematical Foundations for Design Robert M. Stark,Robert L. Nicholls,2005-01-05 Text develops typical mathematical techniques of operations research and systems engineering and applies them to design and operation of civil engineering systems Solutions to selected problems solution guide available upon request 1972 edition UCLA-ENG ,1971

Glowinski,J.L. Lions,2006-11-15 Optimization in Mechanics P. Brousse,2013-10-22 Optimization in Mechanics Problems and Methods investigates various problems and methods of optimization in mechanics The subjects under study range from minimization of masses and stresses or displacements to maximization of loads vibration frequencies and critical speeds of rotating shafts Comprised of seven chapters this book begins by presenting examples of optimization problems in mechanics and considering their application as well as illustrating the usefulness of some optimizations like those of a reinforced shell a robot and a booster The next chapter outlines some of the mathematical concepts that form the framework for optimization methods and techniques and demonstrates their efficiency in yielding relevant results Subsequent chapters focus on the Kuhn Tucker theorem and duality with proofs associated problems and classical numerical methods of mathematical programming including gradient and conjugate gradient methods and techniques for dealing with large scale problems The book concludes by describing optimizations of discrete or continuous structures subject to dynamical effects Mass minimization and fundamental eigenvalue problems as well as problems of minimization of some dynamical responses are studied This monograph is written for students engineers scientists and even self taught individuals
