Mathematical Thinking And Problem Solving:

Mathematical Thinking and Problem Solving Alan H. Schoenfeld, Alan H. Sloane, 2016-05-06 In the early 1980s there was virtually no serious communication among the various groups that contribute to mathematics education: mathematicians, mathematics educators, classroom teachers, and cognitive scientists. Members of these groups came from different traditions, had different perspectives, and rarely gathered in the same place to discuss issues of common interest. Part of the problem was that there was no common ground for the discussions given the disparate traditions and perspectives. As one way of addressing this problem, the Sloan Foundation funded two conferences in the mid 1980s bringing together members of the different communities in a ground clearing effort designed to establish a base for communication. In those conferences, interdisciplinary teams reviewed major topic areas and put together distillations of what was known about them. A more recent conference upon which this volume is based offered a forum in which various people involved in education reform would present their work and members of the broad communities gathered would comment on it. The focus was primarily on college mathematics informed by developments in K-12 mathematics. The main issues of the conference were mathematical thinking and problem solving. Fostering and Sustaining Mathematics Thinking Through Problem Solving John Mason, Joy Davis, 1991 Prepared for courses ECT405, ECT705 offered by the Faculty of Education in Deakin University's Open Campus Program.

Mathematical Problem Solving ALAN H. SCHOENFELD, 2014-06-28 This book is addressed to people with research interests in the nature of mathematical thinking at any level, to people with an interest in higher order thinking skills in any domain, and to all mathematics teachers. The focal point of the book is a framework for the analysis of complex problem solving behavior. That framework is presented in Part One which consists of Chapters 1 through 5. It describes four qualitatively different aspects of complex intellectual activity: cognitive resources, the body of facts and procedures at one's disposal, heuristics (rules of thumb for making progress in difficult situations), control (having to do with the efficiency with which individuals utilize the knowledge at their disposal and belief systems), one's perspectives regarding the nature of a discipline, and how one goes about working in it. Part Two of the book, consisting of Chapters 6 through 10, presents a series of empirical studies that flesh out the analytical framework. These studies document the ways that competent problem solvers make the most of the knowledge at their disposal. They include observations of students indicating some typical roadblocks to success. Data taken from students before and after a series of intensive problem solving courses document the kinds of learning that can result from carefully designed instruction. Finally, observations made in typical high school classrooms serve to indicate some of the sources of students' often counterproductive mathematical behavior. **Mathematical Thinking** John P.
