Mathematical History Of The Golden Number:

The Golden Ratio Mario Livio, 2003-09-23 Throughout history thinkers from mathematicians to theologians have pondered the mysterious relationship between numbers and the nature of reality In this fascinating book Mario Livio tells the tale of a number at the heart of that mystery phi or 1.6180339887 This curious mathematical relationship widely known as The Golden Ratio was discovered by Euclid more than two thousand years ago because of its crucial role in the construction of the pentagram to which magical properties had been attributed Since then it has shown a propensity to appear in the most astonishing variety of places from mollusk shells sunflower florets and rose petals to the shape of the galaxy Psychological studies have investigated whether the Golden Ratio is the most aesthetically pleasing proportion extant and it has been asserted that the creators of the Pyramids and the Parthenon employed it It is believed to feature in works of art from Leonardo da Vinci's Mona Lisa to Salvador Dali's The Sacrament of the Last Supper and poets and composers have used it in their works It has even been found to be connected to the behavior of the stock market The Golden Ratio is a captivating journey through art and architecture botany and biology physics and mathematics It tells the human story of numerous phi fixated individuals including the followers of Pythagoras who believed that this proportion revealed the hand of God astronomer Johannes Kepler who saw phi as the greatest treasure of geometry such Renaissance thinkers as mathematician Leonardo Fibonacci of Pisa and such masters of the modern world as Goethe Cezanne Bartok and physicist Roger Penrose Wherever his quest for the meaning of phi takes him Mario Livio reveals the world as a place where order beauty and eternal mystery will always coexist

A Mathematical History of the Golden Number Roger Herz-Fischler, 2013-12-31 This comprehensive study traces the historic development of division in extreme and mean ratio the golden number from its first appearance in Euclid's Elements through the 18th century Features numerous illustrations

Dimensions of Energy in Shostakovich's Symphonies Michael Rofe, 2016-04-22 Shostakovich's music is often described as being dynamic energetic But what is meant by energy in music After setting out a broad conceptual framework for approaching this question Michael Rofe proposes various potential sources of the perceived energy in Shostakovich's symphonies describing also the historical significance of energeticist thought in Soviet Russia during the composer's formative years The book is in two parts In Part I examples are drawn from across the symphonies in order to demonstrate energy streams within various musical dimensions Three broad approaches are adopted first the theories of Boleslav Yavorsky are used to consider melodic harmonic motion second Boris Asafiev's work with its echoes of Ernst Kurth is used to describe form as a dynamic process and third proportional analysis reveals numerous symmetries and golden sections within

local and large scale temporal structures In Part II the multi dimensionality of musical energy is considered through case studies of individual movements from the symphonies This in turn gives rise to broader contextualised perspectives on Shostakovich s work The book ends with a detailed examination of why a piece of music might contain golden sections

Mathematics and Computation in Music Timour Klouche,Thomas Noll,2010-07-19 This volume comprises a selection of papers presented at the first International Conference on Mathematics and Computation in Music mcm2007 The conference took place at the Staatliches Institut für Musikforschung PK National Institute for Music Research in Berlin during May 18 20 2007 and was jointly organized by the National Institute for Music Research Berlin and the Society of Mathematics and Computation in Music The papers were selected for the conference by the program committee and classified into talks and posters All papers underwent further selection revision and elaboration for this book publication The articles cover a research field which is heterogeneous with respect to content scientific language and methodology On one hand this reflects the heterogeneity and richness of the musical subject domain itself On the other hand it exemplifies a mission which has been explicitly intended by both the organizers and the founders of the society namely to support the integration of mathematical and computational approaches to music theory composition analysis and performance The subdivision into three parts reflects the original structure of the program These parts are opened by invited papers and followed by talks and posters
