Mathematical Modeling in Combustion and Related Topics Claude-Michel Brauner, Claudine Schmidt-Lainé, 2012-12-06
This volume contains invited lectures and contributed papers presented at the NATO Advanced Research Workshop on Mathematical Modeling in Combustion and related topics held in Lyon France April 27 30 1987 This conference was planned to fit in with the two month visit of Professor G S S Ludford to the Ecole Centrale de Lyon He kindly agreed to chair the Scientific and Organizing Committee and actively helped to initiate the meeting His death in December 1986 is an enormous loss to the scientific community in general and in particular to the people involved in the present enterprise The subject of mathematical modeling in combustion is too large for a single conference and the selection of topics reflects both areas of recent research activity and areas of interest to Professor G S S Ludford to whose memory the Advanced Workshop and this present volume are dedicated The meeting was divided into seven specialized sessions detonation theory mathematical analysis numerical treatment of combustion problems flame theory experimental and industrial aspects complex chemistry and turbulent combustion It brought together researchers and engineers from University and Industry see below the closing remarks of the workshop by Prof N Peters The articles in this volume have been judged and accepted on their scientific quality and language corrections may have been sacrificed in order to allow quick dissemination of knowledge to prevail

Mathematical Modeling in Combustion and Related Topics : Proceedings of the NATO Advanced Research Workshop on Mathematical Modeling in Combustion and Related Topics, 1988 **Dynamics of Internal Layers and Diffusive Interfaces** Paul C.

Fife, 1988-01-01 A good introduction to interfacial phenomena and is unique in its treatment of flames as well as internal layer dynamics **Applied Mechanics Reviews**, 1966 **Solid Rocket Propulsion Technology** A. Davenas, 2012-12-02
This book a translation of the French title *Technologie des Propergols Solides* offers otherwise unavailable information on the subject of solid propellants and their use in rocket propulsion The fundamentals of rocket propulsion are developed in chapter one and detailed descriptions of concepts are covered in the following chapters Specific design methods and the theoretical physics underlying them are presented and finally the industrial production of the propellant itself is explained The material used in the book has been collected from different countries as the development of this field has occurred separately due to the classified nature of the subject Thus the reader not only has an overall picture of solid rocket propulsion technology but a comprehensive view of its different developmental permutations worldwide Multicomponent Transport Algorithms Alexandre Ern, Vincent Giovangigli, 2008-10-10 With the advent of sophisticated computer technology and the development of efficient computational algorithms numerical modeling of complex multicomponent laminar reacting flows has emerged as an increasingly popular and firmly established area of scientific research Progress in this area aims at obtaining better resolved and more accurate solutions of specific technological problems in less computer time Therefore it strongly relies upon the ability of evaluating fundamental parameters appearing in the physical models Transport properties

constitute a typical example of the above characterization Evaluating transport coefficients of dilute polyatomic gas mixtures is often critical in many engineering applications including chemical reactors hypersonic flows combustion phenomena and chemical vapor deposition Using the kinetic theory of dilute polyatomic gas mixtures as a starting point this book offers a systematic development of a mathematical and numerical theory for the evaluation of transport properties in dilute polyatomic gas mixtures The present investigation is not specifically about the kinetic theory of gases for which there are plenty of excellent and thoroughly documented textbooks it is rather geared toward the development of new efficient and general algorithms with which to evaluate transport properties of dilute polyatomic gas mixtures at a reasonable computational cost

Progress in Industrial Mathematics at ECMI 2018 István Faragó, Ferenc Izsák, Péter L. Simon, 2019-11-22 This book explores mathematics in a wide variety of applications ranging from problems in electronics energy and the environment to mechanics and mechatronics The book gathers 81 contributions submitted to the 20th European Conference on Mathematics for Industry ECMI 2018 which was held in Budapest Hungary in June 2018 The application areas include Applied Physics Biology and Medicine Cybersecurity Data Science Economics Finance and Insurance Energy Production Systems Social Challenges and Vehicles and Transportation In turn the mathematical technologies discussed include Combinatorial Optimization Cooperative Games Delay Differential Equations Finite Elements Hamilton Jacobi Equations Impulsive Control Information Theory and Statistics Inverse Problems Machine Learning Point Processes Reaction Diffusion Equations Risk Processes Scheduling Theory Semidefinite Programming Stochastic Approximation Spatial Processes System Identification and Wavelets The goal of the European Consortium for Mathematics in Industry ECMI conference series is to promote interaction between academia and industry leading to innovations in both fields These events have attracted leading experts from business science and academia and have promoted the application of novel mathematical technologies to industry They have also encouraged industrial sectors to share challenging problems where mathematicians can provide fresh insights and perspectives Lastly the ECMI conferences are one of the main forums in which significant advances in industrial mathematics are presented bringing together prominent figures from business science and academia to promote the use of innovative mathematics in industry

Transactions of the ... Army Conference on Applied Mathematics and Computing, 1989 *Free Boundary Problems* Darya Apushkinskaya, 2018-09-20 This book is concerned with several elliptic and parabolic obstacle type problems with a focus on the cases where the free and fixed boundaries meet The results presented complement those found in existing books in the subject which mainly treat regularity properties away from the fixed boundary The topics include optimal regularity analysis of global solutions tangential touch of the free and fixed boundaries as well as Lipschitz and C^1 regularity of the free boundary Special attention is given to local versions of various monotonicity formulas The intended audience includes research mathematicians and advanced graduate students interested in problems with free boundaries

Dynamic

Structure of Detonation in Gaseous and Dispersed Media A.A. Borissov, 2012-12-06 Of late the demands of industry in creating new composite and functional materials with present properties stimulated an increased interest to the investigation of processes which occur in the detonation technologies of complex chemical composition with an additive of disperse particles The collection includes a series of papers presented at the 3d International Conference Lavrentyev Readings on Mathematics Mechanics and Physics Novosibirsk 1990 was held by the Hydrodynamics Institute under the support of the Presidium of the Siberian Branch of the USSR Academy of Sciences to stimulate the international cooperation of the leading international centers In the framework of this Conference the Round Table seminar was held by Prof A Borissov and Prof V Mi trofanov devoted to Dynamic Structure of Detonation in Gaseous and Dispersed Media The idea to hold such Round Table was supported by Chairman of Organizing Committee academician Prof V Titov from Hydrodynamics Institute and academician Prof V Nakoryakov and also his Institute of Thermophysics The main ideas discussed at the Round Table were presented in the form of papers which reflected present situation of the problem of dynamic structure of the detonation waves in gaseous and dispersed media The basic experimental facts concerning of complicated mul ti dimensional non stationary structure both of the detonation wave and its front surface generation of the cell structure the effect of transverse waves obstacles channel geometry etc on the transition from dynamic regime to stationary structure are represented in the fist three papers
