Carson, 1985      **Mathematical Modelling of Dynamic Biological Systems** L. Finkelstein, 1985      **Dynamics of Biological Systems** Michael Small, 2011-08-25

From the spontaneous rapid firing of cortical neurons to the spatial diffusion of disease epidemics biological systems exhibit rich dynamic behaviour over a vast range of time and space scales Unifying many of these diverse phenomena Dynamics of Biological Systems provides the computational and mathematical platform from which to understand the underlying processes of the phenomena Through an extensive tour of various biological systems the text introduces computational methods for simulating spatial diffusion processes in excitable media such as the human heart as well as mathematical tools for dealing with systems of nonlinear ordinary and partial differential equations such as neuronal activation and disease diffusion The mathematical models and computer simulations offer insight into the dynamics of temporal and spatial biological systems including cardiac pacemakers artificial electrical defibrillation pandemics pattern formation flocking behaviour the interaction of autonomous agents and hierarchical and structured network topologies Tools from complex systems and complex networks are also presented for dealing with real phenomenological systems With exercises and projects in each chapter this classroom tested text shows students how to apply a variety of mathematical and computational techniques to model and analyze the temporal and spatial phenomena of biological systems MATLAB implementations of algorithms and case studies are available on the author's website      **National Library of Medicine Current Catalog**

National Library of Medicine (U.S.),      *Science of Food Nutrition and Health* Vinod Puri, 2023-07-21 Diet is one of the important facets of comprehensive approach to good health along with physical social emotional and intellectual well being During the second half of the 20th century we witnessed a dramatic change in our eating patterns and lifestyle aided by agricultural and industrial revolution globalisation and urbanisation and emergence of associated diet related chronic diseases such as obesity coronary heart disease hypertension diabetes some type of cancer stroke and degenerative arthritis The science of food and nutrition is very complex Nutrition science like many other fields of science is evolutionary and there are always conflicting research outcomes that need to be carefully evaluated We ingest hundreds of dietary components every day and understanding various metabolic pathways and the effect of interactions of various dietary components in vivo is rather challenging Recent advances in genetic research fostered the emergence of new disciplines such as nutrigenomics proteomics metabolomics and transcriptomics which can shed light on the molecular level interaction between dietary nutrients and the genome These technologies provide the vision for future nutrition research that may unravel how the diet genome interactions modifies the phenotype Food may not be the overall cure for the treatment of every possible disease but the importance of food in both causing and relieving certain problems cannot be neglected This is one of the most researched

topics and there is a lot written about it However this book is probably the only text that provides up to date information on the various interrelated topics on food and nutrition that would be of interest to wider community      *Biomedical Index to PHS-supported Research: pt.
