Mathematics Unbound The Evolution Of An International Mathematical Research Community 1800 1945:

Mathematics Unbound Karen Hunger Parshall, 2002 Although today's mathematical research community takes its international character very much for granted this global nature is relatively recent having evolved over a period of roughly 150 years from the beginning of the nineteenth century to the middle of the twentieth century During this time the practice of mathematics changed from being centered on a collection of disparate national communities to being characterized by an international group of scholars for whom the goal of mathematical research and cooperation transcended national boundaries Yet the development of an international community was far from smooth and involved obstacles such as war political upheaval and national rivalries Until now this evolution has been largely overlooked by historians and mathematicians alike This book addresses the issue by bringing together essays by twenty experts in the history of mathematics who have investigated the genesis of today's international mathematical community This includes not only developments within component national mathematical communities such as the growth of societies and journals but also more wide ranging political philosophical linguistic and pedagogical issues The resulting volume is essential reading for anyone interested in the history of modern mathematics It will be of interest to mathematicians historians of mathematics and historians of science in general

Hausdorff on Ordered Sets Felix Hausdorff, 2005 Georg Cantor the founder of set theory published his last paper on sets in 1897 In 1900 David Hilbert made Cantor's Continuum Problem and the challenge of well ordering the real numbers the first problem in his famous Paris lecture It was time for the appearance of the second generation of Cantorians They emerged in the decade 1900 1909 and foremost among them were Ernst Zermelo and Felix Hausdorff Zermelo isolated the Choice Principle proved that every set could be well ordered and axiomatized the concept of set He became the father of abstract set theory Hausdorff eschewed foundations and pursued set theory as part of the mathematical arsenal He was recognized as the era's leading Cantorian From 1901 1909 Hausdorff published seven articles in which he created a representation theory for ordered sets and investigated sets of real sequences partially ordered by eventual dominance together with their maximally ordered subsets These papers are translated and appear in this volume Each is accompanied by an introductory essay These highly accessible works are of historical significance not only for set theory but also for model theory analysis and algebra

A History of Mathematics in the United States and Canada David E.

Zitarelli, Della Dumbaugh, Stephen F. Kennedy, 2022-07-28 This is the first truly comprehensive and thorough history of the development of a mathematical community in the United States and Canada This second volume starts at the turn of the twentieth century with a mathematical community that is firmly established and traces its growth over the next forty years at the end of which the American mathematical community is pre eminent in the world In the preface to the first volume of this work Zitarelli reveals his animating philosophy I find that the human factor lends life and vitality to any subject History of mathematics in the Zitarelli conception is not just a collection of abstract ideas and their development It is a community of people and practices joining together to understand perpetuate and advance those ideas and each other Telling the story of mathematics means telling the stories of these people their accomplishments and triumphs the institutions and structures they built their interpersonal and scientific interactions and their failures and shortcomings One of the most hopeful developments of the period 1900 1941 in American mathematics was the opening of the community to previously excluded populations Increasing numbers of women were welcomed into mathematics many of whom including Anna Pell Wheeler Olive Hazlett and Mayme Logsdon are profiled in these pages Black mathematicians were often systemically excluded during this period but in spite of the obstacles Elbert Frank Cox Dudley Woodard David Blackwell and others built careers of significant accomplishment that are described here The effect on the substantial community of European immigrants is detailed through the stories of dozens of individuals In clear and compelling prose Zitarelli Dumbaugh and Kennedy spin a tale accessible to experts general readers and anyone interested in the history of science in North America

Mastering the History of Pure and Applied Mathematics Toke Knudsen, Jessica Carter, 2024-06-04 The present collection of essays are published in honor of the distinguished historian of mathematics Professor Emeritus Jesper L tzen In a career that spans more than four decades Professor L tzen s scholarly contributions have enhanced our understanding of the history development and organization of mathematics The essays cover a broad range of areas connected to Professor L tzen s work In addition to this noteworthy scholarship Professor L tzen has always been an exemplary colleague providing support to peers as well as new faculty and graduate students We dedicate this Festschrift to Professor L tzen as a scholarly role model mentor colleague and friend

A Richer Picture of Mathematics David E. Rowe, 2018-02-13 Historian David E Rowe captures the rich tapestry of mathematical creativity in this collection of essays from the Years Ago column of The Mathematical Intelligencer With topics ranging from ancient Greek mathematics to modern relativistic cosmology this collection conveys the impetus and spirit of Rowe s various and many faceted contributions to the history of mathematics Centered on the G ttingen mathematical tradition these stories illuminate important facets of mathematical activity often overlooked in other accounts Six sections place the essays in chronological and thematic order beginning with new introductions that contextualize each section The essays that follow recount episodes relating to the section s overall theme All of the essays in this collection with the exception of two appeared over the course of more than 30 years in The

Mathematical Intelligencer Based largely on archival and primary sources these vignettes offer unusual insights into behind the scenes events Taken together they aim to show how G ttingen managed to attract an extraordinary array of talented individuals several of whom contributed to the development of a new mathematical culture during the first decades of the twentieth century *Using the Mathematics Literature* Kristine K. Fowler,2004-05-25 This reference serves as a reader friendly guide to every basic tool and skill required in the mathematical library and helps mathematicians find resources in any format in the mathematics literature It lists a wide range of standard texts journals review articles newsgroups and Internet and database tools for every major subfield in mathemati The Oxford Handbook of the History of Mathematics Eleanor Robson,Jacqueline Stedall,2009 This handbook explores the history of mathematics addressing what mathematics has been and what it has meant to practise it 36 self contained chapters provide a fascinating overview of 5000 years of mathematics and its key cultures for academics in mathematics historians of science and general historians *Giovanni Battista Guccia* Benedetto Bongiorno,Guillermo P. Curbera,2018-07-19 This book examines the life and work of mathematician Giovanni Battista Guccia founder of the Circolo Matematico di Palermo and its renowned journal the Rendiconti del Circolo matematico di Palermo The authors describe how Guccia an Italian geometer was able to establish a mathematical society in Sicily in the late nineteenth century which by 1914 would grow to become the largest and most international in the world with one of the most influential journals of the time The book highlights the challenges faced by Guccia in creating an international society in isolated Palermo and places Guccia s activities in the wider European context through comparisons with the formation of the London Mathematical Society and the creation of Mittag Leffler s Acta Mathematica in Stockholm Based on extensive searches in European archives this scholarly work follows both historical and scientific treads and will appeal to those interested in the history of mathematics and science in general **James Joseph Sylvester** Karen Hunger Parshall,2006-05-17 This text offers a biography of James Joseph Sylvester his work A Cambridge student at first denied a degree because of his faith Sylvester came to America to teach mathematics becoming Daniel Coit Gilman s faculty recruit at Johns Hopkins in 1876 winning the coveted Savilian Professorship of Geometry at Oxford in 1883
