Mathematics For The Social And Behavioral Sciences:

Mathematics Motivated by the Social and Behavioral Sciences Donald G. Saari, 2018-02-06 The mathematical challenges coming from the social and behavioral sciences differ significantly from typical applied mathematical concerns Change for instance is ubiquitous but without knowing the fundamental driving force standard differential and iterative methods are not appropriate Although differing forms of aggregation are widely used a general mathematical assessment of potential pitfalls is missing These realities provide opportunities to create new mathematical approaches These themes are described in an introductory expository and accessible manner by exploring new ways to handle dynamics and evolutionary game theory to identify subtleties of decision and voting methods to recognize unexpected modeling concerns and to introduce new approaches with which to examine game theory Applications range from avoiding undesired consequences when designing policy to identifying unanticipated voting where the wrong person could win nonparametric statistical and economic supply and demand properties

provide the best information to policy makers Research and knowledge from the social and behavioral sciences SBS can help inform the work of intelligence analysis however in the past bringing important findings from research to bear on the day to day work of intelligence analysis has been difficult In order to understand how knowledge from science can be directed and applied to help the intelligence community fulfill its critical responsibilities the National Academies of Sciences Engineering and Medicine will undertake a 2 year survey of the social and behavioral sciences To launch this discussion a summit designed to highlight cutting edge research and identify future directions for research in a few areas of the social and behavioral sciences was held in October 2016 This publication summarizes the presentations and discussions from the summit
