Architecture and Mathematics from Antiquity to the Future Kim Williams, Michael J. Ostwald, 2015-02-11 Every age and every culture has relied on the incorporation of mathematics in their works of architecture to imbue the built environment with meaning and order Mathematics is also central to the production of architecture to its methods of measurement fabrication and analysis This two volume edited collection presents a detailed portrait of the ways in which two seemingly different disciplines are interconnected Over almost 100 chapters it illustrates and examines the relationship between architecture and mathematics Contributors of these chapters come from a wide range of disciplines and backgrounds architects mathematicians historians theoreticians scientists and educators Through this work architecture may be seen and understood in a new light by professionals as well as non professionals Volume II covers architecture from the Late Renaissance era through Baroque Ottoman Enlightenment Modern and contemporary styles and approaches Key figures covered in this volume include Palladio Michelangelo Borromini Sinan Wren Wright Le Corbusier Breuer Niemeyer and Kahn Mathematical themes which are considered include linear algebra tiling and fractals and the geographic span of the volume s content includes works in the United States of America and Australia in addition to those in Europe and Asia

Mathematics in Architecture Mario Salvadori, 1968 **The Architecture of Modern Mathematics** José Ferreirós Domínguez, Jeremy Gray, 2006-04-27 Aimed at both students and researchers in philosophy mathematics and the history of science this edited volume authored by leading scholars highlights foremost developments in both the philosophy and history of modern mathematics **Architecture and Mathematics in Ancient Egypt** Corinna Rossi, 2004-04-15 In this fascinating study architect and Egyptologist Corinna Rossi analyses the relationship between mathematics and architecture in ancient Egypt by exploring the use of numbers and geometrical figures in ancient architectural projects and buildings While previous architectural studies have searched for abstract universal rules to explain the history of Egyptian architecture Rossi attempts to reconcile the different approaches of archaeologists architects and historians of mathematics into a single coherent picture Using a study of a specific group of monuments the pyramids and placing them in the context of their cultural and historical background Rossi argues that theory and practice of construction must be considered as a continuum not as two separated fields in order to allow the original planning process of a building to re emerge Highly illustrated with plans diagrams and figures this book is essential reading for all scholars of Ancient Egypt and the architecture of ancient cultures

Formulations Andrew Witt, 2022-01-11 An investigation of mathematics as it was drawn encoded imagined and interpreted by architects on the eve of digitization in the mid twentieth century In *Formulations* Andrew Witt examines the visual methodological and cultural intersections between architecture and mathematics The linkages Witt explores involve not the mystic transcendence of numbers invoked throughout architectural history but rather architecture s encounters with a range of calculational systems techniques that architects inventively retooled for design Witt offers a catalog of mid

twentieth century practices of mathematical drawing and calculation in design that preceded and anticipated digitization as well as an account of the formal compendia that became a cultural currency shared between modern mathematicians and modern architects Witt presents a series of extensively illustrated biographies of method episodes that chart the myriad ways in which mathematics particularly the mathematical notion of modeling and drawing was spliced into the creative practice of design These include early drawing machines that mechanized curvature the incorporation of geometric maquettes theorems made flesh into the toolbox of design the virtualization of buildings and landscapes through surveyed triangulation and photogrammetry formal and functional topology stereoscopic drawing the economic implications of cubic matrices and a strange synthesis of the technological mineral and biological crystallographic design Trained in both architecture and mathematics Witt uses mathematics as a lens through which to understand the relationship between architecture and a much broader set of sciences and visual techniques Through an intercultural exchange with other disciplines he argues architecture adapted not only the shapes and surfaces of mathematics but also its values and epistemic ideals
