

$$\therefore 3(\alpha + \beta) = -101, 3(\beta + \gamma) = -71$$

$$3(\gamma + \alpha) = -86 \text{ and } 3(\alpha + \beta + \gamma) = -129$$

$\therefore$ Ans. A, B, C

13. Consider the parabola $y^2 = 4x$. Let S be the focus of the parabola. A pair of tangents drawn to the parabola from the point $P = (-2, 1)$ meet the parabola at P_1 and P_2 . Let Q_1 and Q_2 be points on the lines SP_1 and SP_2 respectively such that PQ_1 is perpendicular to SP_1 and PQ_2 is perpendicular to SP_2 . Then, which of the following is/are TRUE ?

(A) $SQ_1 = 2$

(B) $Q_1Q_2 = \frac{3\sqrt{10}}{5}$

(C) $PQ_1 = 3$

(D) $SQ_2 = 1$

Answer (A, B, C, D)

Sol.

Let $P_1(t^2, 2t)$ then tangent at P_1

$$ty = x + t^2$$

Since it passes through $(-2, 1)$

$$\therefore t^2 - t - 2 = 0$$

$$\therefore t = 2, -1$$

$$\therefore P_1(4, 4) \text{ and } P_2(1, -2)$$

$$\therefore SP_1 : 4x - 3y - 4 = 0$$

$$\text{and } SP_2 : x - 1 = 0$$

$$\text{and for } Q_1 : \frac{x_1 + 2}{4} = \frac{y_1 - 1}{-3} = \frac{-(-8 - 3 - 4)}{25} = \frac{3}{5}$$

$$\therefore x_1 = \frac{2}{5}, y_1 = \frac{-4}{5}$$

$$\text{and } Q_2 = (1, 1)$$

$$\text{So, } SQ_1 = \sqrt{\left(1 - \frac{2}{5}\right)^2 + \left(\frac{4}{5}\right)^2} = 1$$

$$Q_1Q_2 = \sqrt{\frac{9}{25} + \frac{81}{25}} = \sqrt{\frac{90}{25}} = \frac{3\sqrt{10}}{5}$$

$$PQ_1 = \sqrt{\frac{144}{25} + \frac{81}{25}} = 3$$

$$SQ_2 = 1$$

Theorems and Counterexamples in Mathematics Bernard R. Gelbaum, John M.H. Olmsted, 2012-12-06 The gratifying response to Counterexamples in analysis CEA was followed when the book went out of print by expressions of dismay from those who were unable to acquire it The connection of the present volume with CEA is clear although the sights here are set higher In the quarter century since the appearance of CEA mathematical education has taken some large steps reflected in both the undergraduate and graduate curricula What was once taken as very new remote or arcane is now a well established part of mathematical study and discourse Consequently the approach here is designed to match the observed progress The contents are intended to provide graduate and advanced undergraduate students as well as the general mathematical public with a modern treatment of some theorems and examples that constitute a rounding out and elaboration of the standard parts of algebra analysis geometry logic probability set theory and topology The items included are presented in the spirit of a conversation among mathematicians who know the language but are interested in some of the ramifications of the subjects with which they routinely deal Although such an approach might be construed as demanding there is an extensive GLOSSARY and INDEX where all but the most familiar notions are clearly defined and explained The object of the body of the text is more to enhance what the reader already knows than to review definitions and notations that have become part of every mathematician's working context

The Arithmetic of Infinitesimals John Wallis, 2013-06-29 The book is the first English translation of John Wallis's *Arithmetica Infinitorum* 1656 a key text on the seventeenth century development of the calculus Accompanied with annotations and an introductory essay the translation makes Wallis's work fully available for the first time to modern readers It shows how Wallis drew on some of the most important new ideas from the preceding twenty years and took them forward to lay the foundations on which Newton was to build Above all the book displays the crucial mid seventeenth century shift from geometry to arithmetic and algebra as the primary language of mathematics

Equations and Inequalities Jiri Herman, Radan Kucera, Jaromir Simsa, 2000-03-23 A look at solving problems in three areas of classical elementary mathematics equations and systems of equations of various kinds algebraic inequalities and elementary number theory in particular divisibility and diophantine equations In each topic brief theoretical discussions are followed by carefully worked out examples of increasing difficulty and by exercises which range from routine to rather more challenging problems While it emphasizes some methods that are not usually covered in beginning university courses the book nevertheless teaches techniques and skills which are useful beyond the specific topics covered here With approximately 330 examples and 760 exercises

Complexes and Manifolds I. M. James, 2014-05-16 The Mathematical Works of J H C Whitehead Volume 2 Complexes and Manifolds contains papers that are related in some way to the classification problem for manifolds especially the Poincaré conjecture but towards the end one sees the gradual transition in the direction of algebraic topology This volume includes all Whitehead's published work up to the year 1941 as well as a few later papers The book begins with a list of Whitehead's works in chronological order of writing This is followed by separate chapters on topics such as analytical complexes duality and intersection chains in combinatorial analysis situs three dimensional manifolds doubled knots certain sets of elements in a free group certain invariants introduced by Reidemeister and the asphericity of regions in a 3 sphere Also included are chapters on the homotopy type of manifolds the incidence matrices nuclei and homotopy types vector fields on the n sphere and operators in relative homotopy groups
