The Theory of $H(b)$ Spaces: Volume 1 Emmanuel Fricain, Javad Mashreghi, 2016-05-26 An $H(b)$ space is defined as a collection of analytic functions which are in the image of an operator The theory of $H(b)$ spaces bridges two classical subjects complex analysis and operator theory which makes it both appealing and demanding The first volume of this comprehensive treatment is devoted to the preliminary subjects required to understand the foundation of $H(b)$ spaces such as Hardy spaces Fourier analysis integral representation theorems Carleson measures Toeplitz and Hankel operators various types of shift operators and Clark measures The second volume focuses on the central theory Both books are accessible to graduate students as well as researchers each volume contains numerous exercises and hints and figures are included throughout to illustrate the theory Together these two volumes provide everything the reader needs to understand and appreciate this beautiful branch of mathematics

Singular Traces: Volume 1., Theory Steven Lord, Fedor Sukochev, Dmitriy Zanin, 2021-07-19 This book is the second edition of the first complete study and monograph dedicated to singular traces The text offers due to the contributions of Albrecht Pietsch and Nigel Kalton a complete theory of traces and their spectral properties on ideals of compact operators on a separable Hilbert space The second edition has been updated on the fundamental approach provided by Albrecht Pietsch For mathematical physicists and other users of Connes noncommutative geometry the text offers a complete reference to traces on weak trace class operators including Dixmier traces and associated formulas involving residues of spectral zeta functions and asymptotics of partition functions

W. Stewart, 2001-08-30 This is the second volume in a projected five volume survey of numerical linear algebra and matrix algorithms It treats the numerical solution of dense and large scale eigenvalue problems with an emphasis on algorithms and the theoretical background required to understand them The notes and reference sections contain pointers to other methods along with historical comments The book is divided into two parts dense eigenproblems and large eigenproblems The first part gives a full treatment of the widely used QR algorithm which is then applied to the solution of generalized eigenproblems and the computation of the singular value decomposition The second part treats Krylov sequence methods such as the Lanczos and Arnoldi algorithms and presents a new treatment of the Jacobi Davidson method These volumes are not intended to be encyclopedic but provide the reader with the theoretical and

practical background to read the research literature and implement or modify new algorithms
