Philosophy Of The Sixteenth And Seventeenth Centuries:

The Philosophy of the Sixteenth and Seventeenth Centuries Richard Henry Popkin, 1966 **Philosophy of the Sixteenth and Seventeenth Centuries** Richard H. Popkin, 1966-01-01 A short anthology of philosophers of the sixteenth and seventeenth century which includes the most important philosophical writings from Europe during this period Part of the Readings in the History of Philosophy series this volume features writings by the most important philosophers of the era Martin Luther Francis Bacon Rene Descartes Thomas Hobbes Baruch Spinoza Amerigo Vespucci and more with selections carefully chosen to emphasize the range and significance of the important philosophers of this period their inter relationships with each other and with the intellectual currents of their age **The Philosophy of the Sixteenth and Seventeenth Centuries** Richard Henry Popkin, 1971 Philosophy in the Sixteenth and Seventeenth Centuries Constance Blackwell, Sachiko Kusukawa, 2017-05-15 This volume offers an important re evaluation of early modern philosophy It takes issue with the received notion of a revolution in philosophical thought in the 17th century making the case for treating the 16th and 17th centuries together Taking up Charles Schmitt s formulation of the many Aristotelianisms of the period the papers bring out the variety and richness of the approaches to Aristotle rather than treating his as a homogeneous system of thought Based on much new research they provide case studies of how philosophers used developed and reacted to the framework of Aristotelian logic categories and distinctions and demonstrate that Aristotelianism possessed both the flexibility and the dynamism to exert a continuing impact even among such noted anti Aristotelians as Descartes and Hobbes This constant engagement can indeed be termed conversations with Aristotle **The Oxford Handbook of Natural Theology** Russell Re Manning, 2013-01-17 The Oxford Handbook of Natural Theology is the first collection to consider the full breadth of natural theology from both historical and contemporary perspectives and to bring together leading scholars to offer accessible high level accounts of the major themes The volume embodies and develops the recent revival of interest in natural theology as a topic of serious critical engagement Frequently misunderstood or polemicized natural theology is an under studied yet persistent and pervasive presence throughout the history of thought about ultimate reality from the classical Greek theology of the philosophers to twenty first century debates in science and religion Of interest to students and scholars from a wide range of disciplines this authoritative handbook draws on the very best of contemporary scholarship to present a critical overview of the subject area Thirty eight new essays trace the transformations of natural theology in different historical and religious contexts the place of natural theology in different philosophical traditions and diverse scientific disciplines and the various cultural and aesthetic approaches to natural theology to reveal a rich seam of multi faceted theological reflection rooted in human nature and the environments within which we find ourselves **A History of Science, Technology, and Philosophy in the Sixteenth and Seventeenth Centuries** Abraham Wolf, Friedrich Dannemann, A. Armitage, 2012-09-01 *Philosophy and the Arts in Central Europe, 1500-1700* Joseph S.

Freedman,2024-10-28 The articles in this collection focus on instruction and writings arising from that instruction in philosophy and the arts during the sixteenth and seventeenth centuries with emphasis on Central Europe The introduction brings together and expands upon many of the topics discussed and conclusions reached in the remaining seven articles Four of these articles are devoted to examining the significance of two ancient authors Aristotle and Cicero and of two more recent ones Petrus Ramus and Bartholomew Keckermann The article on Keckermann is based in part on previously unpublished biographical and bibliographical source materials Two concepts encyclopedia and philosophy as utilized in the 16th and 17th centuries constitute the subject matter of separate articles And one article focuses primarily on curriculum plans written during the 16th and early 17th centuries These eight articles are based on a wide array of printed and manuscript source materials which are cited together with library archive locations and call numbers and which are made more easily accessible through three indices at the conclusion of this volume

The Philosophy of Francisco Suárez

Benjamin Hill, Henrik Lagerlund, 2012-01-26 During the seventeenth century Francisco Su rez was considered one of the greatest philosophers of the age he is now re merging as a major subject of critical and historical investigation A leading team of scholars explore his work on ethics metaphysics ontology and theology This will be the starting point for future research on Su rez

A History of Natural Philosophy Edward Grant, 2007-01-22 Natural philosophy encompassed all natural phenomena of the physical world It sought to discover the physical causes of all natural effects and was little concerned with mathematics By contrast the exact mathematical sciences were narrowly confined to various computations that did not involve physical causes functioning totally independently of natural philosophy Although this began slowly to change in the late Middle Ages a much more thoroughgoing union of natural philosophy and mathematics occurred in the seventeenth century and thereby made the Scientific Revolution possible The title of Isaac Newton s great work *The Mathematical Principles of Natural Philosophy* perfectly reflects the new relationship Natural philosophy became the Great Mother of the Sciences which by the nineteenth century had nourished the manifold chemical physical and biological sciences to maturity thus enabling them to leave the Great Mother and emerge as the multiplicity of independent sciences we know today

The Rise of Modern Philosophy Tom Sorell, 1993 Modern philosophy in the West is said to have begun with Bacon and Descartes Their methodological and metaphysical writings in conjunction with the discoveries that marked the seventeenth century scientific revolution are supposed to have interred both Aristotelian and scholastic science and the philosophy that supported it But did the new or modern philosophy effect a complete break with what preceded it Were Bacon and Descartes untainted by scholastic influences The theme of this book is that the new and traditional philosophies have more in common than the orthodox account suggests In two survey articles and thirteen essays on individual philosophers the contributors show that the rise of modern philosophy was much more complicated and much more interesting than is usually thought They consider not only metaphysics and the sciences but also claims of Machievelli Hobbes and Spinoza to have invented modern ethics and

politics These two aspects of modernity in philosophy are connected for the first time The book offers a broad view of the early modern philosophers covering not only the much studied major figures but also relatively neglected writers Mersenne Gassendi White and Sergeant *Philosophy of History* M.C. Lemon, 2003-08-29 An essential introduction to a vast body of writing about history from classical Greece and Rome to the contemporary world *The Emergence of a Scientific Culture* Stephen Gaukroger, 2008-10-23 Why did science emerge in the West and how did scientific values come to be regarded as the yardstick for all other forms of knowledge Stephen Gaukroger shows just how bitterly the cognitive and cultural standing of science was contested in its early development Rejecting the traditional picture of secularization he argues that science in the seventeenth century emerged not in opposition to religion but rather was in many respects driven by it Moreover science did not present a unified picture of nature but was an unstable field of different often locally successful but just as often incompatible programmes To complicate matters much depended on attempts to reshape the persona of the natural philosopher and distinctive new notions of objectivity and impartiality were imported into natural philosophy changing its character radically by redefining the qualities of its practitioners The West's sense of itself its relation to its past and its sense of its future have been profoundly altered since the seventeenth century as cognitive values generally have gradually come to be shaped around scientific ones Science has not merely brought a new set of such values to the task of understanding the world and our place in it but rather has completely transformed the task redefining the goals of enquiry This distinctive feature of the development of a scientific culture in the West marks it out from other scientifically productive cultures In *The Emergence of a Scientific Culture* Stephen Gaukroger offers a detailed and comprehensive account of the formative stages of this development and one which challenges the received wisdom that science was seen to be self evidently the correct path to knowledge and that the benefits of science were immediately obvious to the disinterested observer *The Cambridge Bibliography of English Literature* Frederick Wilse Bateson, 1940 *What are We to Understand Gracia to Mean?* Robert A. Delfino, 2006 This book provides a series of challenges to Jorge J E Gracia's views on metaphysics and categories made by realist philosophers in the Aristotelian and Thomistic traditions Inclusion of Gracia's responses to his critics makes this book a useful companion to Gracia's *Metaphysics and its Task The Search for the Categorical Foundation of Knowledge* *Magic, Memory and Natural Philosophy in the Sixteenth and Seventeenth Centuries* Stephen Clucas, 2024-10-28 This collection of Stephen Clucas's articles addresses the complex interactions between religion natural philosophy and magic in sixteenth and seventeenth century Europe The essays on the Elizabethan mathematician and magus John Dee show that the angelic conversations of John Dee owed a significant debt to medieval magical traditions and how Dee's attempts to communicate with spirits were used to serve specific religious agendas in the mid seventeenth century The essays devoted to Giordano Bruno offer a reappraisal of the magical orientation of the Italian philosopher's mnemonic and Lullist writings of the 1580s and 90s and show his influence on early seventeenth century English

understandings of memory and intellection Next come three studies on the atomistic or corpuscularian natural philosophy of the Northumberland and Cavendish circles arguing that there was a distinct English corpuscularian tradition prior to the Gassendian influence in the 1640s and 50s Finally two essays on the seventeenth century Intelligencer Samuel Hartlib and his correspondents shows how religion alchemy and natural philosophy interacted during the Puritan Revolution

Humanism and Calvinism Steven J. Reid, 2016-12-05 Across early modern Europe the confessional struggles of the Reformation touched virtually every aspect of civic life and nowhere was this more apparent than in the universities the seedbed of political and ecclesiastical society Focussing on events in Scotland this book reveals how established universities found themselves at the centre of a struggle by competing forces trying to promote their own political religious or educational beliefs and under competition from new institutions It surveys the transformation of Scotland's medieval and Catholic university system into a greatly expanded Protestant one in the decades following the Scottish Reformation of 1560 Simultaneously the study assesses the contribution of the continentally educated religious reformer Andrew Melville to this process in the context of broader European social and cultural developments including growing lay interest in education as a result of renaissance humanism and the involvement of royal and civic government as well as the new Protestant Kirk in university expansion and reform Through systematic use of largely neglected manuscript sources the book offers fresh perspectives on both Andrew Melville and the development of Scottish higher education post 1560 As well as providing a detailed picture of events in Scotland it contributes to our growing understanding of the role played by higher education in shaping society across Europe

The First Person in Cognition and Morality Béatrice Longuenesse, 2019-11-27 What do we express when we use the first person pronoun I in phrases such as I think or I ought to Do we refer to ourselves as biologically unique socially determined individuals Or do we express a consciousness of ourselves as the bearers of thoughts we share or can share with all other human beings whatever their particular biological social or cultural background Every year the Faculty of Philosophy at the University of Amsterdam invites a prominent philosopher to occupy the Spinoza Chair and give two public lectures on a topic in philosophy Beatrice Longuenesse in these lectures explores the contrast and complementarity between these two aspects of the use of I Her first lecture considers the first person pronoun in relation to the exercise of our mental capacities in abstract reasoning and in relation to our knowledge of objective facts about the world Her second lecture explores the use of I in relation to what we take to be our moral obligations In bringing together these two fascinating lectures this book presents contrasting aspects of the self as radically individual on the one hand and as the bearer of universally shared capacities on the other
