Foundations of Biophilosophy Martin Mahner, Mario Bunge, 1997-05-20 Over the past three decades the philosophy of biology has emerged from the shadow of the philosophy of physics to become a respectable and thriving philosophical subdiscipline In their book the authors take a fresh look at the life sciences and their philosophy from a strictly realist and emergentist naturalist perspective They outline a unified and science oriented philosophical framework that enables them to clarify many foundational and philosophical issues in biology Thus this book should be of interest to both life scientists and philosophers and is suitable as a textbook for courses at the advanced levels as well as for independent study *Thinking about Life* Paul S. Agutter, Denys N. Wheatley, 2008-11-05 Our previous book *About Life* concerned modern biology We used our present day understanding of cells to define the living state providing a basis for exploring several general interest topics the origin of life extraterrestrial life intelligence and the possibility that humans are unique The ideas we proposed in *About Life* were intended as starting points for debate we did not claim them as truth but the information on which they were based is currently accepted as scientific fact What does that mean What is scientific fact and why is it accepted What is science and is biology like other sciences such as physics except in subject matter The book you are now reading investigates these questions and some related ones Like *About Life* it may particularly interest a reader who wishes to change career to biology and its related subdisciplines In line with a recommendation by the British Association for the Advancement of Science that the public should be given fuller information about the nature of science we present the concepts underpinning biology and a

survey of its historical and philosophical basis Processes of Life John Dupré, 2012 John Dupré explores recent revolutionary developments in biology and considers their relevance for our understanding of human nature and society He reveals how the advance of genetic science is changing our view of the constituents of life and shows how an understanding of microbiology will overturn standard assumptions about the living world **Toward a New Philosophy of Biology** Ernst Mayr, 1988 A collection of twenty eight essays five previously unpublished grouped into nine categories Philosophy Natural Selection Adaptation Darwin Diversity Species Speciation Macroevolution and Historical Perspective The book Ernst Mayr notes in the Foreword is an attempt to strengthen the bridge between biology and philosophy and point to the new direction in which a new philosophy of biology will move **Philosophy of Biology** Ale Rosenberg, Alexander Rosenberg, Daniel W. McShea, 2007 Philosophy of Biology, 2007 Biology raises distinct questions of its own not only for philosophy of science but for metaphysics epistemology and ethics This comprehensive new introduction to a growing field of study provides readers new to the subject with an up to date presentation of the key philosophical issues **Everything Flows** Daniel J. Nicholson, John Dupré, 2018 Against the traditional view of the living world as fundamentally composed of enduring things this book argues for the radical alternative is that it essentially consists of processes Biology is the study of the processes that constitute living beings and the things biologists study ultimately derive their existence from more basic processes
