Wallace, 2021-04-22 Very Short Introductions Brilliant Sharp Inspiring Philosophy of physics is concerned with the deepest theories of modern physics notably quantum theory our theories of space time and symmetry and thermal physics and their strange even bizarre conceptual implications A deeper understanding of these theories helps both physics through pointing the way to new theories and new applications and philosophy through seeing how our worldview has to change in the light of what we learn from physics This Very Short Introduction explores the core topics in philosophy of physics through three key themes The first the nature of space time and motion begins by considering the philosophical puzzles that led Isaac Newton to propose the existence of absolute space and then discusses how those puzzles change but do not disappear in the context of the revolutions in our understanding of space and time that came first from special and then from general relativity The second the emergence of irreversible behavior in statistical mechanics considers how the microscopic laws of physics which know of no distinction between past and future can be compatible with the melting of ice the cooling of coffee the passing of youth and all the other ways in which the large scale world distinguishes past from future The last section discusses quantum theory the foundation of most of modern physics yet mysterious to this day It explains just why quantum theory is so difficult to make sense of how we might nonetheless attempt to do it and why the question has been highly relevant to the development of physics and continues to be so ABOUT THE SERIES The Very Short Introductions series from Oxford

**Short Introduction** Thomas Dixon, 2008-07-24 The debate between science and religion is never out of the news emotions run high fuelled by polemical bestsellers like *The God Delusion* and at the other end of the spectrum high profile campaigns to teach Intelligent Design in schools Yet there is much more to the debate than the clash of these extremes As Thomas Dixon shows in this balanced and thought provoking introduction many have seen harmony rather than conflict between faith and science He explores not only the key philosophical questions that underlie the debate but also the social political and ethical

contexts that have made science and religion such a fraught and interesting topic in the modern world offering perspectives from non Christian religions and examples from across the physical biological and social sciences Along the way he examines landmark historical episodes such as the trial of Galileo by the Inquisition in 1633 and the famous debate between Darwin's bulldog Thomas Huxley and Bishop Wilberforce in Oxford in 1860 The Scopes Monkey Trial in Tennessee in 1925 and the Dover Area School Board case of 2005 are explained with reference to the interaction between religion law and education in modern America ABOUT THE SERIES The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area These pocket sized books are the perfect way to get ahead in a new subject quickly Our expert authors combine facts analysis perspective new ideas and enthusiasm to make interesting and challenging topics highly readable
