

THE PHILOSOPHY OF SUSTAINABLE DESIGN

The Principles of Sustainable Design

Principle 1

Respect for the Wisdom of Natural Systems-The Biomimicry Principle

Respect for the wisdom of natural systems is centered on the idea that we should use nature as a mentor and model for all of our designs. In fact, the source of all of our innovations can be traced back to nature itself. Where technologies have been misapplied, they are usually examples of forgetting the lessons inherent all around us. In order to return to a path of true sustainability our communities and built environment need to emulate natural systems.

Principle 2

Respect for People-The Human Vitality Principle

Sustainable design endeavors to create the healthiest, most nourishing places possible for people without diminishing the ability of nature to provide nourishing places for the rest of creation and for our own species in the future. Respect for people reminds us that sustainable design is about creating healthy habitats-for us and the rest of creation.

Principle 3

Respect for Place-The Ecosystem/Bioregion Principle

Sustainable design is built on the idea of regionalism. It honors the differences that exist between places, both on the macro level, with climate regions, and on the micro level, with topographical and biological differences.

The philosophy of sustainable design rejects the notion that our buildings should look the same and be built the same in any region regardless of whether we have the technological know-how and resources to do so. Indeed, it demands that our buildings respond to place in fundamental ways-from the level of the site to that of climate and bioregion.

Principle 4

Respect for the Cycle of Life-The "Seven Generations" Principle

In nature, all waste products are useful to other organisms as food. Respecting the Cycle of Life involves eliminating things wherever possible that are toxic to people and the environment so that the environment is safe "to all people, for all time" 1 Following this principle also means that there should be an appropriate fit between the life expectancy of an object and its use, be it an appliance or a whole building.

Philosophy Of Sustainable Design:

The Philosophy of Sustainable Design Jason F. McLennan, 2004 The author outlines the major ideas and issues that have emerged in the growing movement of green architecture and sustainable design over the last thirty years The book asks individuals to understand how the philosophy of sustainable design can affect their own work **Guiding Principles of**

Sustainable Design, 1993 **Sustainable Design** Tomayess Issa, Pedro Isaias, 2015-10-13 This book is concerned with the importance of Human Computer Interaction HCI Usability user participants and Sustainability in the Information Communication Technology ICT industry throughout the world ICT has become a crucial instrument for communication entertainment commerce and research and this increased usage is presenting new environmental and sustainability issues as we try and meet the ever growing needs of both businesses and individuals Sustainability must become central to the design of new technologies to make a concerted effort to tackle the environmental concerns we face now and for the future Development frameworks tools and models are used and explored and the New Participative Methodology for Sustainable Design NPMSD is introduced as a way of identifying key factors needed in developing more sustainable systems including new smart technology and portable devices It is hoped additional research will be carried out in the future to assess these sustainable design steps using larger more diverse countries with developed and developing economies to further refine such methods Sustainable Design will be an invaluable resource for students and researchers designers and business managers who are interested in the human centred environmental concerns of sustainable technologies **Transformational**

Thought Jason F. McLennan, 2012-10-15 A series of essays about sustainable design by internationally acclaimed architect and green warrior Jason F McLennan Who's Green 2007, 2006-11 *Eco-architecture III* Santiago

Hernández, 2010-03-16 This book contains most of the papers presented in the Eco Architecture 2010 conference which was the third edition of the International Conference on Harmonisation between Architecture and Nature Previous editions that were very successful were held previously in the New Forest UK in 2006 and the Algarve Portugal in 2008 and demonstrated the importance of a forum like this to discuss the characteristics and challenges of such architectural vision Eco Architecture implies a new approach to the design process intended to harmonise its products with nature This involves ideas such as minimum use of energy at each stage of the building process taking into account the amount required during the extraction and transportation of materials their fabrication assembly building erection maintenance and eventual future recycling Presentations in the conference were related to topics like building technologies design by passive systems design with nature ecological and cultural sensitivity life cycle assessment quantifying sustainability in architecture resources and rehabilitation and issues from education research and practice Case studies from different places around the world were also presented *Guiding Principles of Sustainable Design (in Parks and Other Conservation Areas)* DIANE Publishing Company, 1996 Provides a basis for achieving sustainability in facility planning design emphasize the importance of
