Phonological Parsing In Speech Recognition:

Phonological Parsing in Speech Recognition K. Church,2012-12-06 It is well known that phonemes have different acoustic realizations depending on the context Thus for example the phoneme t is typically realized with a heavily aspirated strong burst at the beginning of a syllable as in the word Tom but without a burst at the end of a syllable in a word like cat Variation such as this is often considered to be problematic for speech recogni tion 1 In most systems for sentence recognition such modifications must be viewed as a kind of noise that makes it more difficult to hypothesize lexical candidates given an in put phonetic transcription To see that this must be the case we note that each phonological rule in a certain example results in irreversible ambiguity the phonological rule does not have a unique inverse that could be used to recover the underlying phonemic representation for a lexical item For example schwa vowels could be the first vowel in a word like about or the surface realization of almost any English vowel appearing in a sufficiently destressed word The tongue flap could have come from a t or a d 65 pp 548 549 This view of allophonic variation is representative of much of the speech recognition literature especially during the late 1970 s One can find similar statements by Cole and Jakimik 22 and by Jelinek 50 Time Map Phonology J. Carson-Berndsen,2013-03-14 This book is a revised version of my doctoral thesis which was submitted in April 1993 The main extension is a chapter on evaluation of the system de scribed in Chapter 8 as this is clearly an issue which was not treated in the original version This required the collection of data the development of a concept for diagnostic evaluation of linguistic word recognition systems and of course the actual evaluation of the system itself The revisions made primarily concern the presentation of the latest version of the SILPA system described in an additional Subsection 8 3 the development environment for SILPA in Sec tion 8 4 the diagnostic evaluation of the system as an additional Chapter 9 Some updates are included in the discussion of phonology and computation in Chapter 2 and finite state techniques in computational phonology in Chapter 3 The thesis was designed primarily as a contribution to the area of compu tational phonology However it addresses issues which are relevant within the disciplines of general linguistics computational linguistics and in particular speech technology in providing a detailed declarative computationally inter preted linguistic model for application in spoken language processing Time Map Phonology is a novel constraint based approach based on a two stage temporal interpretation of phonological categories as events **The Integration of Phonetic Knowledge in Speech Technology** William J. Barry,William John Barry,Willem A. van Dommelen,2006-03-31 Continued progress in Speech Technology in the face of ever increasing demands on the performance levels of applications is a challenge to the whole speech and language science community Robust recognition and understanding of spontaneous speech in varied environments good comprehensibility and naturalness of expressive speech synthesis are goals that cannot be achieved without a change of paradigm This book argues for interdisciplinary communication and cooperation in problem solving in general and discusses the interaction between speech and language engineering and phonetics in particular With a number

of reports on innovative speech technology research as well as more theoretical discussions it addresses the practical scientific and sometimes the philosophical problems that stand in the way of cross disciplinary collaboration and illuminates some of the many possible ways forward Audience Researchers and professionals in speech technology and computational linguists **Robustness in Automatic Speech Recognition** Jean-Claude Junqua,Jean-Paul Haton,2012-12-06 Foreword Looking back the past 30 years we have seen steady progress made in the area of speech science and technology I still remember the excitement in the late seventies when Texas Instruments came up with a toy named Speak and Spell which was based on a VLSI chip containing the state of the art linear prediction synthesizer This caused a speech technology fever among the electronics industry Particularly applications of automatic speech recognition were rigorously attempt ed by many companies some of which were start ups founded just for this purpose Unfortunately it did not take long before they realized that automatic speech rec ognition technology was not mature enough to satisfy the need of customers The fever gradually faded away In the meantime constant efforts have been made by many researchers and engi neers to improve the automatic speech recognition technology Hardware capabilities have advanced impressively since that time In the past few years we have been witnessing and experiencing the advent of the Information Revolution What might be called the second surge of interest to com mercialize speech technology as a natural interface for man machine communication began in much better shape than the first one With computers much more powerful and faster many applications look realistic this time However there are still tremendous practical issues to be overcome in order for speech to be truly the most natural interface between humans and machines **Phonology** Jonathan Kaye,2013-03-07 Designed to acquaint the reader with the field of phonology the study of the systems of linguistically significant sounds this book begins with a brief introduction to linguistics and a discussion of phonology s place within that field It then goes on to cover a variety of topics including the nature of phonological units phonological rules which types of phenomena interest phonologists and the evolution of phonological theory Suitable for many applications this volume assumes no previous knowledge of linguistics An excellent text for use in first or second year phonology courses it will also be of value to those involved in cognitive science neuroscience artificial intelligence and computer science Speech Processing Li Deng,Douglas O'Shaughnessy,2018-10-03 Based on years of instruction and field expertise this volume offers the necessary tools to understand all scientific computational and technological aspects of speech processing The book emphasizes mathematical abstraction the dynamics of the speech process and the engineering optimization practices that promote effective problem solving in this area of research and covers many years of the authors personal research on speech processing Speech Processing helps build valuable analytical skills to help meet future challenges in scientific and technological advances in the field and considers the complex transition from human speech processing to computer speech processing Introducing Speech and Language Processing John S. Coleman,2005-03-03 This major new textbook provides a clearly written concise and accessible introduction to speech and

language processing Assuming knowledge of only the very basics of linguistics and written specifically for students with no technical background it is the perfect starting point for anyone beginning to study the discipline Student s are shown from an elementary level how to use two programming languages C and Prolog and the accompanying CD ROM contains all the software needed Setting an invaluable foundation for further study this is set to become the leading introduction to the field

Phonology Charles W. Kreidler,2001 Phonology Critical Concepts the first such anthology to appear in thirty years and the largest ever published brings together over a hundred previously published book chapters and articles from professional journals These have been chosen for their importance in the exploration of theoretical questions with some preference for essays that are not easily accessible Divided into sections each part is preceded by a brief introduction which aims to point out the problems addressed by the various articles and show their relations to one another   , **Dynamics of Speech Production and Perception** P.L. Divenyi,S. Greenberg,G. Meyer,2006-09-20 That speech is a dynamic process strikes as a tautology whether from the standpoint of the talker the listener or the engineer speech is an action a sound or a signal continuously changing in time This book presents a collection of papers which looks at speech as a dynamic process and highlights its particularities   **Laboratory Phonology 7** Carlos Gussenhoven,Natasha Warner,2008-08-22 This collection of recent papers in Laboratory Phonology approaches phonological theory from several different empirical directions Psycholinguistic research into the perception and production of speech has produced results that challenge current conceptions about phonological structure Field work studies provide fresh insights into the structure of phonological features and the phonology phonetics interface is investigated in phonetic research involving both segments and prosody while the role of underspecification is put to the test in automatic speech recognition   The Routledge Handbook of African Linguistics Augustine Agwuele,Adams Bodomo,2018-03-09 The Handbook of African Linguistics provides a holistic coverage of the key themes subfields approaches and practical application to the vast areas subsumable under African linguistics that will serve researchers working across the wide continuum in the field Established and emerging scholars of African languages who are active and current in their fields are brought together each making use of data from a linguistic group in Africa to explicate a chosen theme within their area of expertise and illustrate the practice of the discipline in the continent
