Studies on Reduplication Bernhard Hurch, 2011-12-22 For several reasons mostly inherent to the different developments of generative grammar an increasing number of publications have dealt with reduplication in the past 20 years Reduplication lends itself perfectly as a test field for theories that opt for a non segmental organization of phonology and morphology As it happens frequently then the discussion centers around a rather small set of data for which alternative analysis are offered and which themselves are intended to contribute to the foundation of new theoretical developments The present volume which goes back to a conference on reduplication at the University of Graz Austria offers a broader approach to reduplication not only from different theoretical viewpoints but especially for its phenomenology Across theories a number of highly qualified authors deal with formal and functional perspectives with typological properties with semantics comparative issues the role of reduplication in language acquisition the acquisition of reduplicative systems sign languages creoles and pidgins general grammatical and cognitive principles the picture is completed by a series of language or language family specific studies as on Uto Aztecan Salish Tupi Guarani Moroccan and Cairene Arabic various African languages Chinese Turkish Indo European languages from India etc The overall scope of the conference was to contribute to a new level of discussion of the phenomenon across theories and across specializations and interests Update on Contributor s addresses PDF

A Reference Grammar of Kotiria (Wanano) Kristine Stenzel, 2013-07-01 Published through the Recovering Languages and Literacies of the Americas initiative supported by the Andrew W Mellon Foundation This is the first descriptive grammar of Kotiria Wanano a member of the Tukanoan language family spoken in the Vaupes River basin of Colombia and Brazil in the northwest Amazon rain forest The Kotirias have lived

in this remote region for more than seven hundred years and participate in the complex Vaupes social system characterized by longstanding linguistic and cultural interaction The Kotirias remained relatively isolated from the dominant societies until the early part of the twentieth century when the region began to experience increasing outside influence leading to processes of rapid social and linguistic change Today the Kotirias number only about sixteen hundred people and their language though still used in traditional communities is rapidly becoming endangered Kristine Stenzel draws on eight years of intensive work with the Kotirias to promote record and revitalize their language Working with dozens of native speakers and drawing on numerous oral narratives and written texts this book is the first comprehensive study of this endangered language and one of the few reference grammars of this language family A Grammar of Igala Ejebe, Salem Ochala, 2017-01-17 The book establishes 28 phonemic consonants and 7 vowels as well as lexical and grammatical tones in Igala It shows the canonical syllable types as V and CV with no complexity and relates resyllabification to the retiming of segments as tone bearing units and the duration of their mora The work discusses nine word classes as well as ideophones and clitics in Igala There are splitting verbs of various structures and fully fledged pronouns with morphologically toneless clitic counterparts that are toned in their syntactic context among other elements of the Igala morphology The work establishes clitics as generally bearing the grammatical tones of various categories as a result of their morphological tonelessness and their availability for post lexical tone assignment It also accounts for the generally complex interaction of clitics and tones in the organisation of the morphosyntax and the tone syntax interface Igala has both verbal and nominal extensional affixes with various semantic features Some interesting discussions in the Igala syntax include the structural and functional types of serial verb constructions the detransitivizing process of verb movement in object demoting structures coreferentiality in relativised constituents and the future non future temporal distinction Complementary binominals are conjoined with a specified binominal morpheme and their rigidly irreversible structures have implications in the Igala semantics The binominals demonstrate a grammatically specified pattern defined over a conceptual space showing the network among conceptual categories such as kinship marital social hunter hunted more less and cause effect relationships as reflected in the Igala grammar *Clinical Management of Speech Sound Disorders* Carol Koch, 2018-01-12 Clinical Management of Speech Sound Disorders A Case Based Approach meets the need of speech language pathology instructors who work with children who demonstrate articulation and phonological disorders This text presents an overview of case based learning as an introductory chapter and the application in the discipline of speech language pathology and focus on various evidence based approaches for treating children with speech sound disorders *English Phonetics and Phonology for Spanish Speakers* Brian Leonard Mott, 2011-03-11 Las caracter sticas m s importantes de esta obra son Ejemplificaci n de muchas variedades ling sticas aparte del espa ol y el catal n Ejercicios variados al final de cada cap tulo M ltiples ejercicios de transcripci n fon tica Comparaci n de los sistemas fonol gicos ingl s espa ol y catal n Glosario de t rminos t cnicos ingl s
