The series Structure and Bonding publishes critical reviews on topics of research concerned with chemical structure and bonding The scope of the series spans the entire Periodic Table and addresses structure and bonding issues associated with all of the elements It also focuses attention on new and developing areas of modern structural and theoretical chemistry such as nanostructures molecular electronics designed molecular solids surfaces metal clusters and supramolecular structures Physical and spectroscopic techniques used to determine examine and model structures fall within the purview of Structure and Bonding to the extent that the focus is on the scientific results obtained and not on specialist information concerning the techniques themselves Issues associated with the development of bonding models and generalizations that illuminate the reactivity pathways and rates of chemical processes are also relevant The individual volumes in the series are thematic The goal of each volume is to give the reader whether at a university or in industry a comprehensive overview of an area where new insights are emerging that are of interest to a larger scientific audience Thus each review within the volume critically surveys one aspect of that topic and places it within the context of the volume as a whole The most significant developments of the last 5 to 10 years should be presented using selected examples to illustrate the principles discussed A description of the physical basis of the experimental techniques that have been used to provide the primary data may also be appropriate if it has not been covered in detail elsewhere The coverage need not be exhaustive in data but should rather be conceptual concentrating on the new principles being developed that will allow the reader who is not a specialist in the area covered to understand the data presented Discussion of possible future research directions in the area is welcomed Review articles for the individual volumes are invited by the volume editors Readership research scientists at universities or in industry graduate students

Set reviews and examines topics of relevance to today's inorganic chemists Covering more interdisciplinary and high impact
areas Comprehensive Inorganic Chemistry II includes biological inorganic chemistry solid state chemistry materials
chemistry and nanoscience The work is designed to follow on with a different viewpoint and format from our 1973 work
Comprehensive Inorganic Chemistry edited by Bailar Emel us Nyholm and Trotman Dickenson which has received over 2 000
citations The new work will also complement other recent Elsevier works in this area Comprehensive Coordination Chemistry
and Comprehensive Organometallic Chemistry to form a trio of works covering the whole of modern inorganic chemistry
Chapters are designed to provide a valuable long standing scientific resource for both advanced students new to an area and
researchers who need further background or answers to a particular problem on the elements their compounds or
applications Chapters are written by teams of leading experts under the guidance of the Volume Editors and the Editors in
Chief The articles are written at a level that allows undergraduate students to understand the material while providing active
researchers with a ready reference resource for information in the field The chapters will not provide basic data on the
elements which is available from many sources and the original work but instead concentrate on applications of the elements
and their compounds Provides a comprehensive review which serves to put many advances in perspective and allows the
reader to make connections to related fields such as biological inorganic chemistry materials chemistry solid state chemistry
and nanoscience Inorganic chemistry is rapidly developing which brings about the need for a reference resource such as this
that summarise recent developments and simultaneously provide background information Forms the new definitive source
for researchers interested in elements and their applications completely replacing the highly cited first edition which
published in 1973
