Black Knowledges/Black Struggles Jason R. Ambrose, Sabine Bröck-Sallah, 2015 *Black Knowledges/Black Struggles* Essays in Critical Epistemology explores the central but often critically neglected role of knowledge and epistemic formations within social movements for Black freedom and emancipation The collection examines the structural subjugation and condemnation of Black African and Afro mixed descent peoples globally within the past 500 years of trans Atlantic societies of Western modernity doing so in connection to the population's dehumanization and or invisibilization within various epistemic formations of the West In turn the collection foregrounds the extent to which the ending of this imposed subjugation condemnation has necessarily entailed critiques of challenges to and counter formulations against and beyond knowledge and epistemic formations that have worked to naturalize this condition within the West's various socio human formations The chapters in the collection engage primarily with knowledge formations and practices generated from within the discourse of race but also doing so in relation to other intersectional socio human discourses of Western modernity They engage as well the critiques challenges and counter formulations put forth by specific individuals schools movements and or institutions historic and contemporary of the Black world Through these examinations the contributors either implicitly point towards or explicitly take part in the formation of a new kind of critical but also emancipatory epistemology What emerges is a novel and more comprehensive view of what it means to be human a

formulation that can aid in the unlocking and fashioning of species oriented ways of knowing and being much needed within the context of ending the continued overall global subjugation condemnation of Black peoples as a central part of ending the global problematique that confronts humankind as a whole *The Oxford Handbook of Cultural Sociology* Jeffrey C. Human Races Prof. Stanley M. Garn, 2017-06-28 First published in 1961 this book provides a contemporary definition of race the distinction between geographical local and micro races as well as consideration of the major evolutionary mechanisms of race formation in man Author Professor Stanley M Garn was and remains a pivotal figure in the history of biological interpretations of race He considered racial classification based on physical traits to be imprecise and believed physical traits to be independent of each other making classification by the assumption that a population shares certain traits incorrect He also argued that racial classifications based on physical type seemingly elevated some physical traits to a racial status but glossed over others and concluded that racial classifications based on physical type can always be compartmentalized into smaller populations which share more physical traits in common Thus here in his book Human Races he used three gradations of racial classification which were increasingly more specific in scope geographical local and micro Human Races is an attempt to describe what race is and the mechanisms of racial differentiation in man It will I hope help to dispel the antiquated notions of three original races of the persistence of racial types and of the role of undirected chance in bringing about racial differences In their stead I trust will emerge the contemporary picture of man s genetic response to local selective factors the constantly changing nature of the natural populations we call races Author s Preface **Pure Society** André Pichot, 2020-05-05 Amid the eulogies and celebrations commemorating the bicentenary of Charles Darwin s birth the darker side of evolutionary theory should not be forgotten In The Pure Society Andr Pichot one of France s foremost specialists in the history of science excavates the underside of the Darwinian legacy where the notions of race and heredity became powerful tools of malign political agendas and instruments of social oppression Pichot examines the relationship

between science politics and ideology through an analysis of specific cases from Nazism and the concentration camps to the various eugenicist research programmes launched or financed by eminent scientific organizations. Racist eugenic ideas were once prevalent among the scientific community despite a patent lack of supporting evidence. As today's scientists and writers applaud the advance of science, the egregious mistakes made along the way are too often forgotten. Now with the mapping of the human genome and rapid advances in gene therapies, Pichot warns that biologists are increasingly emboldened to venture into the realms of public policy and politics. If moral philosophers abandon these fields, it is all too possible that the lights of a misguided science will resurrect the dream of a pure society.

The Cambridge Companion to Lévi-Strauss
