Hayes, Gerald L. Alexanderson, 2011 This book is the second volume based on lectures for pre college students given by prominent mathematicians in the Bay Area Mathematical Adventures BAMA This book reflects the flavor of the BAMA lectures and the excitement they have generated among the high school and middle school students in the Silicon Valley The topics cover a wide range of mathematical subjects each treated by a leading proponent of the subject at levels designed to challenge and attract students whose mathematical interests are just beginning In addition the treatments given here will intrigue and enchant a more mature mathematician It is hoped that the publication of these lectures will expose students outside of the San Francisco Bay Area to interesting mathematical topics and treatments outside of their normal experience in the classroom Mathematical educators are encouraged to offer the students in their own localities similar opportunities to come into contact with exciting adventures in mathematics [Calculus Gems: Brief Lives and Memorable Mathematics](#) George F. Simmons, 2020-03-17 Calculus Gems a collection of essays written about mathematicians and mathematics is a spin off of two appendices Biographical Notes and Variety of Additional Topics found in Simmons 1985 calculus book With many additions and some minor adjustments the material will now be available in a separate softcover volume The text is suitable as a supplement for a calculus course and or a history of mathematics course The overall aim is bound up in the question What is mathematics for and in Simmons answer To delight the mind and help us understand the world The essays are independent of one another allowing the instructor to pick and choose among them Part A Brief Lives is a biographical history of mathematics from earliest times Thales 625 547 BC through the late 19th century Weierstrass 1815 1897 that serves to connect mathematics to the broader intellectual and social history of Western civilization Part B Memorable Mathematics is a collection of interesting topics from number theory geometry and science arranged in an order roughly corresponding to the order of most calculus courses Some of these sections have a few problems for the student to solve Students can gain perspective on the mathematical experience and learn some mathematics not contained in the usual courses and instructors can assign student papers and projects based on the essays The book teaches by example that mathematics is more than computation Original illustrations of influential mathematicians in history and their inventions accompany the brief

Shubin, 2020-08-03 The Early Mathematics of Leonhard Euler C. Edward Sandifer, 2020-07-14 The Early Mathematics of Leonhard Euler gives an article by article description of Leonhard Euler s early mathematical works the 50 or so mathematical articles he wrote before he left St Petersburg in 1741 to join the Academy of Frederick the Great in Berlin These early pieces contain some of Euler s greatest work the Konigsberg bridge problem his solution to the Basel problem and his first proof of the Euler Fermat theorem It also presents important results that we seldom realize are due to Euler that mixed partial derivatives are usually equal our $f_{x f x}$ notation and the integrating factor in differential equations The books shows how contributions in diverse fields are related how number theory relates to series which in turn relate to elliptic integrals and then to differential equations There are dozens of such strands in this beautiful web of mathematics At the same time we see Euler grow in power and sophistication from a young student when at 18 he published his first work on differential equations a paper with a serious flaw to the most celebrated mathematician and scientist of his time It is a portrait of the world s most exciting mathematics between 1725 and 1741 rich in technical detail woven with connections within Euler s work and with the work of other mathematicians in other times and places laced with historical context **A**
