Mathematical Physical Theories Of 2vol:

Quantum Field Theory I: Basics in Mathematics and Physics Eberhard Zeidler, 2007-04-18 This is the first volume of a modern introduction to quantum field theory which addresses both mathematicians and physicists at levels ranging from advanced undergraduate students to professional scientists The book bridges the acknowledged gap between the different languages used by mathematicians and physicists For students of mathematics the author shows that detailed knowledge of the physical background helps to motivate the mathematical subjects and to discover interesting interrelationships between quite different mathematical topics For students of physics fairly advanced mathematics is presented which goes beyond the usual curriculum in physics

Differential Operators and Spectral Theory M. Sh Birman, Margarita Solomyak, 1999 This volume contains a collection of original papers in mathematical physics spectral theory and differential equations The papers are dedicated to the outstanding mathematician Professor M Sh Birman on the occasion of his 70th birthday Contributing authors are leading specialists and close professional colleagues of Birman The main topics discussed are spectral and scattering theory of differential operators trace formulas and boundary value problems for PDEs Several papers are devoted to the magnetic Schrodinger operator which is within Birman's current scope of interests and recently has been studied extensively Included is a detailed survey of his mathematical work and an updated list of his publications This book is aimed at graduate students and specialists in the above mentioned branches of mathematics and theoretical physicists The biographical section will be of interest to readers concerned with the scientific activities of Birman and the history of those branches of analysis and spectral theory where his contributions were important and often decisive Features The first detailed survey of Birman's mathematical work includes an updated bibliography New material on the history of some branches of analysis Prominent authors Lieb Agmon Deift Simon Ladyzhenskaya and others All original works containing new results in fields of great current interest

Mathematical Physics, Spectral Theory and Stochastic Analysis Michael Demuth, Werner Kirsch, 2014-07-08 This volume presents self contained survey articles on modern research areas written by experts in their fields The topics are located at the interface of spectral theory theory of partial differential operators stochastic analysis and mathematical physics The articles are accessible to graduate students and researchers from other fields of mathematics or physics while also being of value to experts as they report on the state of the art in the respective fields

Quantum Algebras and Poisson Geometry in Mathematical Physics Mikhail Vladimirovich Karasev, Elena M. Novikova, Yurii Mikhailovich Vorobjev, 2005 This collection presents new and interesting applications of Poisson geometry to some fundamental well known problems in mathematical physics In addition to advanced Poisson geometry the methods used by the authors include unexpected algebras with non Lie commutation relations nontrivial quantum Kahlerian structures of hypergeometric type dynamical systems theory semiclassical asymptotics and more The volume is suitable for graduate students and researchers interested in mathematical physics Other AMS publications by M Karasev include Nonlinear

Poisson Brackets Geometry and Quantization Coherent Transform Quantization and Poisson Geometry and Asymptotic Methods for Wave and Quantum Problems Methods of Mathematical Physics, Volume 1 Richard Courant, David Hilbert, 2024-11-12 Since the first volume of this work came out in Germany in 1924 this book together with its second volume has remained standard in the field Courant and Hilbert's treatment restores the historically deep connections between physical intuition and mathematical development providing the reader with a unified approach to mathematical physics The present volume represents Richard Courant's second and final revision of 1953 **Topics in Statistical and Theoretical Physics** R. L. Dobrushin, 1996 **Spectral Theory of Differential Operators** T. Suslina, 2008-01-01 Translations of articles on mathematics appearing in various Russian mathematical serials **Noncommutative Geometry and Representation Theory in Mathematical Physics** Jürgen Fuchs, 2005 Mathematics provides a language in which to formulate the laws that govern nature It is a language proven to be both powerful and effective In the quest for a deeper understanding of the fundamental laws of physics one is led to theories that are increasingly difficult to put to the test In recent years many novel questions have emerged in mathematical physics particularly in quantum field theory Indeed several areas of mathematics have lately become increasingly influential in physics and in turn have become influenced by developments in physics Over the last two decades interactions between mathematicians and physicists have increased enormously and have resulted in a fruitful cross fertilization of the two communities This volume contains the plenary talks from the international symposium on Noncommutative Geometry and Representation Theory in Mathematical Physics held at Karlstad University Sweden as a satellite conference to the Fourth European Congress of Mathematics The scope of the volume is large and its content is relevant to various scientific communities interested in noncommutative geometry and representation theory It offers a comprehensive view of the state of affairs for these two branches of mathematical physics The book is suitable for graduate students and researchers interested in mathematical physics **Scattering Theory in Mathematical Physics** J.A. Lavita, J.P. Marchand, 2012-12-06 These proceedings contain lectures given at the N A T O Advanced Study Institute entitled Scattering Theory in Mathematics and Physics held in Denver Colorado June 11-29 1973 We have assembled the main series of lectures and some presented by other participants that seemed naturally to complement them Unfortunately the size of this volume does not allow for a full account of all the contributions made at the Conference however all present were pleased by the number and breadth of those topics covered in the informal afternoon sessions The purpose of the meeting as reflected in its title was to examine the single topic of scattering theory in as many of its manifestations as possible i.e. as a hub of concepts and techniques from both mathematics and physics The format of all the topics presented here is mathematical The physical content embraces classical and quantum mechanical scattering N-body systems and quantum field theoretical models Left out are such subjects as the so called analytic S matrix theory and phenomenological models for high energy scattering We would like to thank the main lecturers for their excellent

presentations and written summaries They provided a focus for the exceptionally strong interaction among the participants and we hope that some of the coherence achieved is reflected in these published notes We have made no attempt to unify notation

Operator Theory, Pseudo-Differential Equations, and Mathematical Physics Yuri I. Karlovich, Luigi Rodino, Bernd Silberman, Ilya M. Spitkovsky, 2012-10-30 This volume is a collection of papers devoted to the 70th birthday of Professor Vladimir Rabinovich The opening article by Stefan Samko includes a short biography of Vladimir Rabinovich along with some personal recollections and bibliography of his work It is followed by twenty research and survey papers in various branches of analysis pseudodifferential operators and partial differential equations Toeplitz Hankel and convolution type operators variable Lebesgue spaces etc close to Professor Rabinovich's research interests Many of them are written by participants of the International workshop Analysis Operator Theory and Mathematical Physics Ixtapa Mexico January 23-27 2012 having a long history of scientific collaboration with Vladimir Rabinovich and are partially based on the talks presented there The volume will be of great interest to researchers and graduate students in differential equations operator theory functional and harmonic analysis and mathematical physics
