Mathematics: a Modern Introduction Mervin Laverne Keedy, Marvin L. Bittinger, 1970      **A Modern Introduction to Ancient Indian Mathematics** T. S. Bhanu Murthy, 1993 The Purpose Of This Book Is To Draw The Attention Of Students And Teachers Of Mathematics To The Historical Continuity Of Indian Mathematics Starting From The Sulba Sutras Of The Vedas Up To The 17Th Century The Book Includes Proofs Not Presented So Far Of The Propositions Stated In The Well Known Treatise Vedic Mathematics By Sri Bharati Krishna Teertha It Also Introduces To The Modern Reader The Work Of Aryabhata Brahmagupta Bhaskara And Madhava      Outline of a Modern Introduction to Mathematics John Leslie Lawrence, Wabash College, 195?      **A Modern Introduction to the Mathematical Theory of Water Waves** Robin Stanley Johnson, 1997-10-28 This text considers classical and modern problems in linear and non linear water wave theory

**Modern Introduction to Mathematics** John E. Freund, 1956      A Modern Introduction to Linear Algebra Henry Ricardo, 2009-10-21 Useful Concepts and Results at the Heart of Linear Algebra A one or two semester course for a wide variety of students at the sophomore junior undergraduate level A Modern Introduction to Linear Algebra provides a rigorous yet accessible matrix oriented introduction to the essential concepts of linear algebra Concrete easy to understand examples m      **Riemannian Geometry** Isaac Chavel, 2006-04-10 This book provides an introduction to Riemannian geometry the geometry of curved spaces for use in a graduate course Requiring only an understanding of differentiable manifolds the author covers the introductory ideas of Riemannian geometry followed by a selection of more specialized topics Also featured are Notes and Exercises for each chapter to develop and enrich the reader s appreciation of the subject This second edition first published in 2006 has a clearer treatment of many topics than the first edition with new proofs of some theorems and a new chapter on the Riemannian geometry of surfaces The main themes here are the effect of the curvature on the usual notions of classical Euclidean geometry and the new notions and ideas motivated by curvature itself Completely new themes created by curvature include the classical Rauch comparison theorem and its consequences in geometry and topology and the interaction of microscopic behavior of the geometry with the macroscopic structure of the space      *Energy Economics: A Modern Introduction* Ferdinand E. Banks, 2012-12-06 Energy is the go of things as James Clerk Maxwell pointed out This th simple truth was largely overlooked during the first 70 years of the 20 century because in the industrial world most politicians civil servants and opinion makers were inclined to believe that virtually an infinite supply of reasonably priced energy would always be available and so things would continue to go in the manner to which many of their constituents and admirers had become accustomed Similar opinions were held about fresh air and water for consumption and agricultural uses As a result it was not until the last two decades of the century that serious courses in energy and environmental economics began to be offered at institutions of higher learning around the world This book is intended as a comprehensive introductory text and or reference book for courses of this nature having to do with energy economics I have also attempted

to make the book useful for self study As far as I know there are no energy economics text or reference books on the level of this book in the English language Needless to say if I am wrong then I apologise to their authors but right or wrong I would like to see more energy economics books of all descriptions now We cannot afford to have the same kind of mistakes made with energy policy that in much of the world are being made with e g employment policy     *Decision Mathematics* Robert Davison, Lynda Cochrane, 1991-01-01     **Mathematical Physics** Sadri Hassani, 2013-07-27 The goal of this book is to expose the reader to the indispensable role that mathematics plays in modern physics Starting with the notion of vector spaces the first half of the book develops topics as diverse as algebras classical orthogonal polynomials Fourier analysis complex analysis differential and integral equations operator theory and multi dimensional Green s functions The second half of the book introduces groups manifolds Lie groups and their representations Clifford algebras and their representations and fibre bundles and their applications to differential geometry and gauge theories This second edition is a substantial revision with a complete rewriting of many chapters and the addition of new ones including chapters on algebras representation of Clifford algebras fibre bundles and gauge theories The spirit of the first edition namely the balance between rigour and physical application has been maintained as is the abundance of historical notes and worked out examples that demonstrate the unreasonable effectiveness of mathematics in modern physics
