Mathematics Of Stochastic Manufacturing Systems:

Hierarchical Decision Making in Stochastic Manufacturing Systems Suresh P. Sethi, Qing Zhang, 2012-12-06 One of the most important methods in dealing with the optimization of large complex systems is that of hierarchical decomposition. The idea is to reduce the overall complex problem into manageable approximate problems or subproblems to solve these problems and to construct a solution of the original problem from the solutions of these simpler problems. Development of such approaches for large complex systems has been identified as a particularly fruitful area by the Committee on the Next Decade in Operations Research 1988 42 as well as by the Panel on Future Directions in Control Theory 1988 65. Most manufacturing firms are complex systems characterized by several decision subsystems such as finance, personnel, marketing and operations. They may have several plants and warehouses and a wide variety of machines and equipment devoted to producing a large number of different products. Moreover, they are subject to deterministic as well as stochastic discrete events such as purchasing new equipment, hiring and layoff of personnel and machine setups, failures and repairs.

Mathematics of Stochastic Manufacturing Systems George Yin, Qing Zhang, 1997-01-01 In this volume leading experts in mathematical manufacturing research and related fields review and update recent advances of mathematics in stochastic manufacturing systems and attempt to bridge the gap between theory and applications. The topics covered include scheduling and production planning, modeling of manufacturing systems, hierarchical control for large and complex systems, Markov chains, queueing networks, numerical methods for system approximations, singular perturbed systems, risk sensitive control, stochastic optimization methods, discrete event systems and statistical quality control.

Handbook of Stochastic Models and Analysis of Manufacturing System Operations J. MacGregor Smith, Barış Tan, 2013-05-17 This handbook surveys important stochastic problems and models in manufacturing system operations and their stochastic analysis. Using analytical models to design and control manufacturing systems and their operations entail critical stochastic performance analysis as well as integrated optimization models of these systems. Topics deal with the areas of facilities planning, transportation and material handling systems, logistics and supply chain management and integrated productivity and quality models covering Stochastic modeling and analysis of manufacturing systems, Design analysis and optimization of manufacturing systems, Facilities planning, transportation and material handling systems analysis, Production planning, scheduling systems management and control.

Analytical approaches to logistics and supply chain management Integrated productivity and quality models and their analysis Literature surveys of issues relevant in manufacturing systems Case studies of manufacturing system operations and analysis Today s manufacturing system operations are becoming increasingly complex Advanced knowledge of best practices for treating these problems is not always well known The purpose of the book is to create a foundation for the development of stochastic models and their analysis in manufacturing system operations Given the handbook nature of the volume introducing basic principles concepts and algorithms for treating these problems and their solutions is the main intent of this handbook Readers unfamiliar with these research areas will be able to find a research foundation for studying these problems and systems Mathematics of Stochastic Manufacturing Systems G. Sethi,Hanqin Zhang,Qing Zhang,2005 Most manufacturing systems are large complex and operate in an environment of uncertainty It is common practice to manage such systems in a hierarchical fashion This book articulates a new theory that shows that hierarchical decision making can in fact lead to a near optimization of system goals The material in the book cuts across disciplines It will appeal to graduate students and researchers in applied mathematics operations management operations research and system and control theory *Maintenance, Modeling and Optimization* Mohamed Ben-Daya,Salih O. Duffuaa,Abdul Raouf,2012-12-06 Production costs are being reduced by automation robotics computer integrated manufacturing cost reduction studies and more These new technologies are expensive to buy repair and maintain Hence the demand on maintenance is growing and its costs are escalating This new environment is compelling industrial maintenance organizations to make the transition from fixing broken machines to higher level business units for securing production capacity On the academic front research in the area of maintenance management and engineering is receiving tremendous

interest from researchers. Many papers have appeared in the literature dealing with the modeling and solution of maintenance problems using operations research (OR) and management science (MS) techniques. This area represents an opportunity for making significant contributions by the OR and MS communities. Maintenance Modeling and Optimization provides in one volume the latest developments in the area of maintenance modeling. Prominent scholars have contributed chapters covering a wide range of topics. We hope that this initial contribution will serve as a useful informative introduction to this field that may permit additional developments and useful directions for more research in this fast growing area. The book is divided into six parts and contains seventeen chapters. Each chapter has been subject to review by at least two experts in the area of maintenance modeling and optimization. The first chapter provides an introduction to major maintenance modeling areas illustrated with some basic models. Part II contains five chapters dealing with maintenance planning and scheduling. Part III deals with preventive maintenance in six chapters. Part IV focuses on condition based maintenance and contains two chapters. Part V deals with integrated production and maintenance models and contains two chapters. Part VI addresses issues related to maintenance and new technologies and also deals with Just in Time (JIT) and Maintenance.
