

*Mathematics For Queensland  
Year 11 Mathematics B  
Chapter Five – Quadratic Functions*

**Additional Problems**

**Note:** Most of these questions are very challenging for Year 11 Mathematics B students. These problems require good understanding and/or a high level of algebraic skill. Even solving Q5(c) of these is reason for celebration.

1. You have learned many different methods of solving quadratic equations – describe each of these. State the strengths and weaknesses of each method. Identify the one you prefer and explain why you prefer it.
2. It takes a very high initial velocity to keep a thrown ball in the air for seven seconds – try it! The record time in the air for a thrown baseball is about eight seconds. Assuming a baseball is in the air for eight seconds, and the force of gravity,  $g = -10 \text{ ms}^{-2}$ :
  - a. what is the initial vertical velocity?
  - b. what is the maximum height reached?
  - c. The quadratic formula used to answer the above questions can be thought of as a mathematical model for the height of a projectile at a given time. What assumptions are made when we use this model?
  - d. How realistic are those assumptions? Or, put another way, how might the mathematical model be modified to give a more accurate model?
3. You are managing a holiday complex that contains 100 units. From past records you estimate that if you charge \$4000 per unit per week, all units will be rented over the coming holiday season. However for each increase of \$200 per week, 5 additional units will become vacant. What weekly cost will maximise the revenue (i.e. the total collected, before expenses)?
4. There is a paradox that involves completing the square. The conclusion is obviously incorrect. What is the error in this argument?

$$\begin{aligned} 16 - 16 &= 25 - 40 \\ x^2 - 4x &= 9 - 8 + 1 \\ x^2 - 4x + 4 &= \frac{81}{4} - 8 + 1 + \frac{81}{4} \\ 16 - \frac{16}{2}x^2 &= 18 - \frac{16}{2}x^2 \\ 16 - \frac{16}{2} &= 18 - \frac{16}{2} \\ 16 - 8 &= 18 - 8 \end{aligned}$$

**Mathematical Modelling: From Theory To Practice** Ngan Hoe Lee, Kit Ee Dawn Ng, 2015-01-19 This book documents the journey undertaken by educators from the Mathematics and Mathematics Education MME Academic Group in the National Institute of Education NIE and Singapore schools during a Mathematical Modelling Outreach MMO event in June 2010 under the guidance of renowned experts in the field of mathematical modelling The main goal of MMO was to reach out to Singapore primary and secondary schools and introduce the potentials of mathematical modelling as a platform for eliciting mathematical thinking communication and reasoning among students This book contributes to the expanding literature on mathematical modelling by offering voices from the Singaporean context It suggests how theoretical perspectives on mathematical modelling can be transformed into actual practice in schools all within the existing infrastructure of the current Singapore mathematics curriculum More importantly the book provides documentary evidence on how plans put in place through MMO in 2010 have since been realised The publication of this book is hence timely at this juncture Not only does the book record how MMO was among the first pebbles launched into the pond it also serves as a bridge over which educators can stand upon to view how the ripple effect had developed from the initial MMO pebble and the directions it may continue to extend Perhaps in the process other ripples in the teaching learning and research of mathematical modelling can be created
