Fuertes-Olivera,Sven Tarp,2014-06-18 This book is the first comprehensive monograph on the Function Theory of Lexicography which originated at the Aarhus School of Business Aarhus University Function Theory considers dictionaries to be tools that are constructed for assisting specific users with particular needs in specific usage situations e.g. communicative oriented situations and cognitive oriented situations The book's main focus is on defending the independent academic status of lexicography and its corollary The process of designing

compiling and updating specialised online dictionaries needs a theoretical framework that addresses general and specific aspects. The former are common to all types of information tools; the latter are mainly dependent on the media for which the information tool is constructed and their specific target users. This book offers both aspects and moves from the highest level of abstraction to very detailed aspects of lexicographic work, e.g. how to convert an originally conceived polyfunctional online dictionary into several monofunctional usage-based ones. The book illustrates that the theory and the methodology currently used by advocates of the Function Theory of Lexicography offers better results than other approaches and therefore makes its case for proposing the Function Theory for terminological terminographical work. **Competing**

Schools of Economic Thought Lefteris Tsoulfidis, 2010-06-29 1 1 Introduction This book was born out of our reaction to the way in which the usual texts cover the subject of the history of economic thought. In most of these texts there is a tendency to emphasize the similarities and differences between all the important economists and form a repository of encyclopedic knowledge where one can study the seemingly important economic ideas. In this book we argue that it is much more fruitful to focus on the essential ideas of each and every school of economic thought and relate them to present-day problems than to engage into a sterile discussion of the ideas and the lives of the great economists of the past. Thus although this book deals with the history of economic thought it does not necessarily follow a historic in the sense of the order of presentation approach but rather a logical one that is to say it deals with the social conditions associated with the emergence of a school of economic thought, its evolution and its contemporary influence. One cannot write a book on the history of economic thought without writing separate chapters on the major economists of the past that is Adam Smith, David Ricardo, Karl Marx and J. M. Keynes. Of course these economists formed schools of economic thought that is the classical and the Keynesian.
