Philosophical Papers 1913-1946:

Philosophical Papers 1913-1946 M. Neurath, 2012-12-06 The philosophical writings of Otto Neurath and their central themes have been described many times by Carnap in his autobiographical essay by Ayer and Morris and Kraft decades ago by Haller and Hegselmann and Nemeth and others in recent years How extraordinary Neurath's insights were even when they perhaps were more to be seen as conjectures a per se philosophical hypotheses tools to be taken up and used in the practical workshop of life and how prescient he was A few examples may be helpful 1 Neurath's 1912 lecture on the conceptual critique of the idea of a pleasure maximum ON 50 substantially anticipates the development of aspects of analytical ethics in mid century 2 Neurath's 1915 paper on alternative hypotheses and systems of hypotheses within the science of physical optics ON 81 gives a lucid account of the historically developed clashing theories of light their un realized further possibilities and the implied contingencies of theory survival in science all within his framework that antedates not only the quite similar work of Kuhn so many years later but also of the Vienna Circle too 3 Neurath's subsequent paper of 1916 investigates the inadequacies of various attempts to classify systems of hypotheses ON 82 and this volume and sets forth a pioneering conception of the metatheoretical task of scientific philosophy Logical Empiricism and Naturalism

Joseph Bentley, 2023-06-01 This text provides an extensive exploration of the relationship between the thought of Otto Neurath and Rudolf Carnap providing a new argument for the complementarity of their mature philosophies as part of a collaborative metatheory of science In arguing that both Neurath and Carnap must be interpreted as proponents of epistemological naturalism and that their naturalisms rest on shared philosophical ground it is also demonstrated that the boundaries and possibilities for epistemological naturalism are not as restrictive as Quinean orthodoxy has previously suggested Both building on and challenging the scholarship of the past four decades this naturalist reading of Carnap also provides a new interpretation of Carnap's conception of analyticity allowing for a refutation of the Quinean argument for the incompatibility of naturalism and the analytic synthetic distinction In doing so the relevance and potential importance of their scientific meta theory for contemporary questions in the philosophy of science is demonstrated This text appeals to students and researchers working on Logical Empiricism Quine the history of analytic philosophy and the history of philosophy of science as well as proponents of naturalized epistemology **Logical Empiricism and the Physical Sciences**

Sebastian Lutz, Adam Tamas Tuboly, 2021-04-26 This volume has two primary aims to trace the traditions and changes in methods concepts and ideas that brought forth the logical empiricists philosophy of physics and to present and analyze the logical empiricists various and occasionally contrary ideas about the physical sciences and their philosophical relevance These original chapters discuss these developments in their original contexts and social and institutional environments thus showing the various fruitful conceptions and philosophies behind the history of 20th century philosophy of science Logical Empiricism and the Natural Sciences is divided into three thematic sections Part I surveys the influences on logical

empiricism's philosophy of science and physics. It features chapters on Maxwell's role in the worldview of logical empiricism, on Reichenbach's account of objectivity, on the impact of Poincaré on Neurath's early views on scientific method, Frank's exchanges with Einstein about philosophy of physics, and on the forgotten role of Kurt Grelling. Part II focuses on specific physical theories, including Carnap's and Reichenbach's positions on Einstein's theory of general relativity, Reichenbach's critique of unified field theory, and the logical empiricists' reactions to quantum mechanics. The third and final group of chapters widens the scope to philosophy of science and physics in general. It includes contributions on von Mises' frequentism, Frank's account of concept formation and confirmation, and the interrelations between Nagel's, Feigl's, and Hempel's versions of logical empiricism. This book offers a comprehensive account of the logical empiricists' philosophy of physics. It is a valuable resource for researchers interested in the history and philosophy of science, philosophy of physics, and the history of analytic philosophy.

Neurath Reconsidered Jordi Cat, Adam Tamas Tuboly, 2019-02-12. This highly readable book is a collection of critical papers on Otto Neurath (1882–1945). It comprehensively re-examines Neurath's scientific, philosophical, and educational contributions from a range of standpoints, including historical, sociological, and problem-oriented perspectives. Leading Neurath scholars disentangle and connect Neurath's works, ideas, and ideals, and evaluate them both in their original socio-historical context and in contemporary philosophical debates. Readers will discover a new critical understanding. Drawing on archive materials, essays discuss not only Neurath's better-known works from lesser-known perspectives but also his lesser-known works from the better-known perspective of their place in his overall philosophical oeuvre. Reflecting the full range of Neurath's work, this volume has a broad appeal. Besides scholars and researchers interested in Neurath, Carnap, the Vienna Circle, work on logical empiricism, and the history and philosophy of science, this book will also appeal to graduate students in philosophy, sociology, history, and education. Readers will find Neurath's thoughts described and evaluated in an accessible manner, making it a good read for those beyond the academic world, such as social leaders and activists. The book includes the edited 1940–45 Neurath–Carnap correspondence and the English translation of Neurath's logic papers.

The History of Understanding in Analytic Philosophy Adam Tamas Tuboly, 2022-02-10. Interpretive understanding of human behaviour, known as *verstehen*, underpins the divide between the social sciences and the natural sciences. Taking a historically orientated approach, this collection offers a fresh take on the development of understanding within analytic philosophy, before, during, and after logical empiricism. In doing so, it reinvigorates debates on the role of the social sciences within contemporary epistemology. Bringing together leading experts, including Martin Kusch, Thomas Uebel, Karsten Stueber, and Giuseppina D'Oro, it is an authoritative reference on the logical empiricists' philosophy of social science. Charting the various reformulations of *verstehen* as proposed by Wilhelm Dilthey, Max Weber, R. G. Collingwood, and Peter Winch, the volume explores the reception of the social sciences prior to logical empiricism, before surveying the positive and negative critiques from Otto Neurath, Felix Kaufmann, Viktor Kraft, and other logical empiricists. As such, chapters reveal that *verstehen* was not altogether rejected by

the Vienna Circle but was subject to various conceptual uses and misuses Along with systematic historical coverage the book situates verhester within contemporary interdisciplinary developments in the field shedding light on the 21st century turn to understanding among analytic philosophers and opening further lines of inquiry for philosophy of social science

Revisiting Discovery and Justification Jutta Schickore, Friedrich Steinle, 2006-01-27 The distinction between the contexts of discovery and justification has left a turbulent wake in the philosophy of science This book recognizes the need to re open the debate about the nature development and significance of the context distinction about its merits and flaws The discussion clears the ground for the productive and fruitful integration of these new developments into philosophy of science

Ways of the Scientific World-Conception. Rudolf Carnap and Otto Neurath, 2024-07-22 Rudolf Carnap 1891 1970 and Otto Neurath 1882 1945 had a decisive influence on the development of the scientific world view of logical empiricism Their relationship was marked by mutual intellectual stimulation close collaboration and personal friendship but also by controversies that were as heated as they were rarely fought out in public Carnap and Neurath were in the words of Olga Hahn Neurath like minded opponents The essays in this volume deal with these key thinkers of logical empiricism from different perspectives shedding light on the complex development of one of the most influential philosophical currents of the twentieth century in the midst of dark times **Advances in Scientific Philosophy**, 2023-06-26 **Foucault's Critical Ethics** Richard A. Lynch, 2016-09-05 The central thesis of Foucault's Critical Ethics is that Foucault's account of power does not foreclose the possibility of ethics on the contrary it provides a framework within which ethics becomes possible Tracing the evolution of Foucault's analysis of power from his early articulations of disciplinary power to his theorizations of biopower and governmentality Richard A Lynch shows how Foucault's ethical project emerged through two interwoven trajectories analysis of classical practices of the care of the self and engaged practice in and reflection upon the limits of sexuality and the development of friendship in gay communities These strands of experience and inquiry allowed Foucault to develop contrasting yet interwoven aspects of his ethics they also underscored how ethical practice emerges within and from contexts of power relations The gay community's response to AIDS and its parallels with the feminist ethics of care serve to illustrate the resources of a Foucauldian ethic a fundamentally critical attitude with substantive but revisable values and

norms grounded in a practice of freedom *The Market* John O'Neill, 1998 Provides a critique of the market economy focusing primarily but not exclusively on the work of F A Hayek *Idealization and the Aims of Science* Angela Potochnik, 2017-11-17 Science is the study of our world as it is in its messy reality Nonetheless science requires idealization to function if we are to attempt to understand the world we have to find ways to reduce its complexity Idealization and the Aims of Science shows just how crucial idealization is to science and why it matters Beginning with the acknowledgment of our status as limited human agents trying to make sense of an exceedingly complex world Angela Potochnik moves on to explain how science aims to depict and make use of causal patterns a project that makes essential use of idealization She offers case studies from a number of branches of science to demonstrate the ubiquity of idealization shows how causal patterns are used to develop scientific explanations and describes how the necessarily imperfect connection between science and truth leads to researchers values influencing their findings The resulting book is a tour de force a synthesis of the study of idealization that also offers countless new insights and avenues for future exploration *Otto Neurath and the History of Economics* Michael Turk, 2018-05-11 Although Otto Neurath left his mark across an array of fields in the first half of the twentieth century he was trained as an economist and wrote extensively about economics He questioned the philosophical foundations of economic concepts the fuzziness of economic terminology the unwarranted reduction of economic theorizing to matters of price and the misplaced reliance upon certain quantitative approaches This book intends to find a place for Otto Neurath in the history of economic thought by examining and analyzing his economic ideas both on their own terms albeit with a critical perspective and in the broader context of their impact Neurath may be seen as a pioneer in posing ideas and approaches now considered heterodox This book will be of interest to students and researchers of the history of economic thought and especially those interested in the evolution of heterodox economics in the twentieth century *Induction and Deduction in the Sciences* F. Stadler, 2004-04-30 The articles in this volume deal with the main inferential methods that can be applied to different kinds of experimental evidence These contributions accompanied with critical comments by renowned scholars in the field of philosophy of science aim at removing the traditional opposition between inductivists and deductivists They explore the different methods of explanation and justification in the sciences in different contexts and with different objectives The volume contains contributions on methods of the sciences especially on induction deduction abduction laws probability and explanation ranging from logic mathematics natural to the social sciences They present a highly topical pluralist re evaluation of methodological and foundational procedures and reasoning e g focusing in Bayesianism and Artificial Intelligence They document the second international conference in Vienna on Induction and Deduction in the Sciences as part of the Scientific Network on Historical and Contemporary Perspectives of Philosophy of Science in Europe funded by the European Science Foundation ESF Moritz Schlick B.F. McGuinness, 2012-12-06 The idea for this issue arose during a gathering of scholars to commemorate the hundredth anniversary of Moritz Schlick 1882 1936 the

philosopher from Germany whose influence gave Austria its most characteristic philosophical voice between the two world wars He was cut off tragically in his prime and while he escaped the exile that awaited most of those who thought like him he was unable sadly for philosophy to continue to steer their thoughts in his own direction and he even lost some of the credit for work already done Thus it seemed to some of his former pupils and to others more remote from him in the tradition that a small collection of papers throwing light on his especial contribution and on the extent to which it is still active or still needed today was a requirement of justice no less than of piety Tscha Hung a member of the Vienna Circle and since director of the Institute for Western Philosophy at Peking University was the chief mover here Also among the contributors Ludovico Geymonat Professor at Milan was a visitor to the Circle and a friend of Schlick Henrich Melzer and Joseph Schlichter were Viennese pupils of Schlick s The former died in the war of 1939 45 the latter is still prominent in the cultural and educational life of Israel

Physicalism Daniel Stoljar, 2010-04-05 Physicalism the thesis that everything is physical is one of the most controversial problems in philosophy Its adherents argue that there is no more important doctrine in philosophy whilst its opponents claim that its role is greatly exaggerated In this superb introduction to the problem Daniel Stoljar focuses on three fundamental questions the interpretation truth and philosophical significance of physicalism In answering these questions he covers the following key topics a brief history of physicalism and its definitions what a physical property is and how physicalism meets challenges from empirical sciences Hempel s dilemma and the relationship between physicalism and physics physicalism and key debates in metaphysics and philosophy of mind such as supervenience identity and conceivability physicalism and causality Additional features include chapter summaries annotated further reading and a glossary of technical terms making Physicalism ideal for those coming to the problem for the first time
