**Religion, Language, and the Human Mind** Paul Anthony Chilton, Monika Weronika Kopytowska, 2018 Religion is a multi faceted and complex human phenomenon combining many different mental and social characteristics Among these language plays a crucial though often neglected role This volume brings together groundbreaking work from linguistics cognitive science and neuroscience as well as from religious studies in order to illuminate the origins and centrality of religion in human life      **Buddhist Thought and Applied Psychological Research** D.K. Nauriyal, Michael Drummond, Y.B. Lal, 2006-08-21 Written by leading scholars and including a foreword by the Dalai Lama this book explores the interface between Buddhist studies and the uses of Buddhist principles and practices in psychotherapy and consciousness studies The contributors present a compelling collection of articles that illustrate the potential of Buddhist informed social sciences in contemporary society including new insights into the nature of human consciousness The book examines the origins and expressions of Buddhist thought and how it is now being utilized by psychologists and social scientists and also discusses the basic tenets of Buddhism and contemporary Buddhist based empirical research in the psychological sciences Further emphasis is placed on current trends in the areas of clinical and cognitive psychology and on the Mahayana Buddhist understanding of consciousness with reference to certain developments in consciousness studies and physics A welcome addition to the current literature the works in this remarkable volume ably demonstrate how Buddhist principles can be used to develop a deeper understanding of the human condition and behaviours that lead to a balanced and fulfilling life

**Tropological Thought and Action** Marko Živković, Jamin Pelkey, James W. Fernandez, 2021-01-14 From twilight in the Himalayas to dream worlds in the Serbian state this book provides a unique collection of anthropological and cross cultural inquiry into the power of rhetorical tropes and their relevance to the formation and analysis of social thought and action through a series of ethnographic essays offering in depth studies of the human imagination at work and play around the world      **Thinking Through Rituals** Kevin Schilbrack, 2004-08-02 Thinking Through Rituals explores religious ritual acts and their connection to meaning and truth building upon their special status as virtually pure forms of belief in action

*The Best of Social Anarchism* Howard J. Ehrlich, a. h. s. boy, 2013-09-01 Since 1980 Social Anarchism A Journal of Theory and Practice has developed into a premier anarchist periodical a feat that is honored in this anthology that showcases the journal s finest pieces Dividing its focus equally between theoretical works and descriptions of contemporary practice the anthology boasts such notable contributors as Noam Chomsky Colin Ward Kingsley Widmer Murray Bookchin and Richard Kostelanetz and all contributions have been reviewed by an international board of editors avoiding the sectarian diatribes that characterize so much of political writing The book is divided into five major sections that cover theory practice education

historical figures and contemporary voices and each article includes a summary abstract written by the editors This fascinating and relevant collection presents a unique and rewarding perspective on the fresh and vital contributions of anarchism to the modern world *Imagining Religion in the Czech Republic* Jakub Havlicek, 2021 How do we think about ourselves and others Part one of the book examines the notion of human universals in cultural anthropology psychology linguistics and in cognitive sciences This part is focused on the issue of examining the processes of conceptualization categorization and classification of human types and identities and it examines the role of psychological essentialism in these processes It also focuses on the topic of religiously interpreted identities Part two examines religiosity in modern Czech society Contemporary Czech religiosity or lack thereof has been interpreted narrowly from the perspective of socially and culturally conceptualized factors Other possible factors have been neglected for example neuropsychological aspects The World Religions Paradigm that underpins teaching about religions in Czech education system is composed of reified concepts of religious traditions This paradigm provides a basis for essentialised conceptualization of religiously interpreted identities in contemporary Czech society Ideological, Cultural, and Linguistic Roots of Educational Reforms to Address the Ecological Crisis C. A. Bowers, 2018-05-04 In this volume C A Chet Bowers whose pioneering work on education and environmental and sustainability issues is widely recognized and respected around the world brings together a carefully curated selection of his seminal work on the ideological cultural and linguistic roots of the ecological crisis misconceptions underlying modern consciousness the cultural commons a critique of technology and educational reforms to address these pressing concerns In the World Library of Educationalists series international scholars themselves compile career long collections of what they judge to be their finest pieces extracts from books key articles salient research findings major theoretical and practical contributions so the world can read them in a single manageable volume Readers will be able to follow the themes and strands of their work and see their contribution to the development of a field as well as the development of the field itself Contributors to the series include Michael Apple James A Banks Joel Spring William F Pinar Stephen J Ball Elliot Eisner Howard Gardner John Gilbert Ivor F Goodson and Peter Jarvis **Spatial Dimensions of Social Thought** Thomas W. Schubert, Anne Maass, 2011-10-28 Space provides the stage for our social lives social thought evolved and developed in a constant interaction with space The volume demonstrates how this has led to an astonishing intertwining of spatial and social thought For the first time research on language comprehension metaphors priming spatial perception face perception art history and other fields is brought together to provide an integrative view This overview confirms that often metaphors reveal a deeper truth about how our mind uses spatial information to represent social concepts Yet the evidence also goes beyond this insight showing for instance how flexible our mind operates with spatial metaphors how the peculiarities of our bodies determine the way we assign meaning to space and how the asymmetry of our brain influences spatial and face perception Finally it is revealed that also how we write language from left to right or from right to left

shapes how we perceive interpret and produce horizontal movement and order The evidence ranges from linguistics to social and spatial perception to neuropsychology seamlessly integrating such diverse findings as speed in word comprehension children s depictions of abstract concepts estimates of the steepness of hills and archival research on how often Homer Simpson is depicted left or right of Marge The chapters in this book offer a topology of social cognition and explore the pivotal role language plays in creating links between spatial and social thought

**The Case for Reduction** Christoph F. E. Holzhey, Jakob Schillinger, 2022-10-11 Critical discourse hardly knows a more devastating charge against theories technologies or structures than that of being reductive Yet expansion and growth cannot fare any better today This volume suspends anti reductionist reflexes to focus on the experiences and practices of different kinds of reduction their generative potentials ethics and politics Can their violences be contained and their benefits transported to other contexts

**The Blackwell Dictionary of Modern Social Thought** William Outhwaite, 2008-04-15 Modern social thought ranges widely from the social sciences to philosophy political theories and doctrines cultural ideas and movements and the influence of the natural sciences Provides an authoritative overview of the main themes of social thought Long essays and entries give full coverage to each topic Covers major currents of thought philosophical and cultural trends and the individual social sciences from anthropology to welfare economics New edition updates about 200 entries and includes new entries suggestions for further reading and a bibliography of all sources cited within the text

**Attention to Metaphor** Valentina Cuccio, 2018-09-25 The last decades of the twentieth century have witnessed a fundamental scientific discovery the identification of mirror neurons and consequently the development of the Embodied Simulation theory Neuroscientific data on the mechanism of Embodied Simulation and its role in conceptual and linguistic processing figurative language included have stimulated a great deal of research on the embodied nature of conceptual metaphors However the very definition of the notions of body and embodiment are today still controversial in the Embodied Cognition debate This book addresses the issue of the specific contribution of the body to conceptual and linguistic processing and provides a new definition for the mechanism of Embodied Simulation In this light and in consideration of a revision of the contemporary theory of metaphor recently introduced by Gerard Steen who distinguished between deliberate and non deliberate metaphor processing the book also proposes a new model of metaphor processing that brings together the mechanism of Embodied Simulation on the one hand and the notion of deliberateness on the other Modulation of

attention during linguistic processing is a key component in explaining how they interact Potential readers of the book include linguists psychologists philosophers and any other cognitive scientists and communication scientists piqued by the topic of metaphor and embodiment Handbook of Phenomenology and Cognitive Science Daniel Schmicking, Shaun Gallagher, 2009-12-16 This volume explores the essential issues involved in bringing phenomenology together with the cognitive sciences and provides some examples of research located at the intersection of these disciplines The topics addressed here cover a lot of ground including questions about naturalizing phenomenology the precise methods of phenomenology and how they can be used in the empirical cognitive sciences specific analyses of perception attention emotion imagination embodied movement action and agency representation and cognition intersubjectivity language and metaphor In addition there are chapters that focus on empirical experiments involving psychophysics perception and neuro and psychopathologies The idea that phenomenology understood as a philosophical approach taken by thinkers like Husserl Heidegger Sartre Merleau Ponty and others can offer a positive contribution to the cognitive sciences is a relatively recent idea Prior to the 1990s phenomenology was employed in a critique of the first wave of cognitivist and computational approaches to the mind see Dreyfus 1972 What some consider a second wave in cognitive science with emphasis on connectionism and neuroscience opened up possibilities for phenomenological intervention in a more positive way resulting in proposals like neurophenomenology Varela 1996 Thus brain imaging technologies can turn to phenomenological insights to guide experimentation see e.g. Jack and Roepstorff 2003 Gallagher and Zahavi 2008 Universe and Inner Self in Early Indian and Early Greek Thought Richard Seaford, 2016-07-11 This volume brings together Hellenists and Indologists representing a variety of perspectives on the similarities and differences between the two cultures It offers a collaborative contribution to the burgeoning interest in the Axial Age and will be of interest to anyone intrigued by the big questions inspired by the ancient world

**Glossary of Morphology** Federico Vercellone, Salvatore Tedesco, 2020-12-01 This book is a significant novelty in the scientific and editorial landscape Morphology is both an ancient and a new discipline that rests on Goethe's heritage and reforms it in the present through the concepts of form and image The latter are to be understood as structural elements of a new cultural grammar able to make the late modern world intelligible In particular compared to the original Goethean project but also to C.P. Snow's idea of unifying the two cultures the fields of morphological culture that are the object of this glossary have profoundly changed The ever increasing importance of the image as a polysemic form has made the two concepts absolutely transitive so to speak This is concomitant with the emergence of a culture that revolves around the image attracting the verbal logos into its orbit Incidentally even the hermeneutic relationship between past and present relies more and more on the image causing deep changes in cultural environments Form and image are not just bridging concepts as in the field of ancient morphology but real transitive concepts that define the state of a culture From the Internet to smartphones television advertising etc we are witnessing as Horst Bredekamp observes an immense mass of

images that fill our time and affect the most diverse areas of our culture The ancient connection between science and art recalled by Goethe emerges with unusual evidence thanks to intersecting patterns and expressive forms that are sometimes shared by different forms of knowledge Creating a glossary and a culture of these intersections is the task of morphology which thus enters into the boundaries between aesthetics art design advertising and sciences from mathematics to computer science to physics and to biology in order to provide the founding elements of a grammar and a syntax of the image The latter in its formal quality both expressive and symbolic is a fundamental element in the unification of the various kinds of knowledge which in turn come to be configured in this regard also as styles of vision The glossary is subdivided into contiguous sections within a complex framework of cross references In addition to the two curators the book features the collaboration of a team of scholars from the individual disciplines appearing in the glossary     Applied Process Thought Mark Dibben, Thomas Kelly, 2013-05-02 Concentrating mainly on the process philosophy developed by Alfred North Whitehead this series of essays brings together some of the newest developments in the application of process thinking to the physical and social sciences These essays by established scholars in the field demonstrate how a wider and deeper understanding of the world can be obtained using process philosophical concepts how the distortions and blockages inevitably inherent in substantivist talk can be set aside and how new and fertile lines of research in the sciences can be opened as a result     *The Cambridge Handbook of Metaphor and Thought* Raymond W. Gibbs, Jr., 2008-09-22 A comprehensive collection of essays in multidisciplinary metaphor scholarship that has been written in response to the growing interest among scholars and students from a variety of disciplines such as linguistics philosophy anthropology music and psychology These essays explore the significance of metaphor in language thought culture and artistic expression There are five main themes of the book the roots of metaphor metaphor understanding metaphor in language and culture metaphor in reasoning and feeling and metaphor in non verbal expression Contributors come from a variety of academic disciplines including psychology linguistics philosophy cognitive science literature education music and law     *Symposium on Nicholas Rescher* John R. Shook, Paulo Ghiraldelli, 2005
